Thereupon, Mr. Walkley spoke of his New England bringing up, of his love for the country wherein he learned those principles he will not forget till the grave. He spoke of the greatness of the passing century, but of the greater possibilities of the new. Of the influence of liberty upon all countries and of the important place the United States would take in the world, as the fountain-head of liberty. In closing, he read with a deal of fervor and patriotic expression a poem, "The History of Our Flag," which was received with every demonstration of approval.

Miss Annie Frank Libby then gave Thomas' "Autumn" as a harp solo.

A motion to convey to Mrs. Howe, by a standing vote, the enjoyment and appreciation of her talk was duly carried; also that she accept the flowers in front of her; that while they live they remind her of the Association's pleasure in her company.

The thanks of the Association were also voted to the "Hardware Poet," Mr. Walkley.

A 'cello solo followed, "The Elfin Dance," by Popper, rendered by D'Albert Webster.

The festivities were brought to a conclusion by all present singing "Auld Lang Syne," thus ending a very pleasant evening, one not soon forgotten, in a most appropriate manner.

PROGRESS OF PARIS EXHIBITION...II.

Continued from our issue of December 10, 1899.

One of the characteristic features of the 1900 Paris Exposition will be the concentrated motive power plant which will be on a scale never before attempted. At previous expositions the power machines and motors have been scattered and miscellaneous; but the modern development of the idea of the power house has made it desirable that the Exposition of 1900 should contain an example of such a plant. All the power exhibits are therefore to be so disposed as to form a collective, as well as an individual attraction.

An interesting feature will be the provision for dealing with the flue gases from the boilers.

The steam generators will be collected in two great boiler houses, each with an underground flue, which, increasing in size as it extends, will at last discharge itself into one of the two great chimneys, which will constitute a striking feature of the buildings. As it was desired that these chimneys should be ornamental as well as useful, their design was thrown open to competition; it being prescribed that the scheme of ornamentation and construction should lend itself to the suitable illumination of the stack. This general lighting up of all the prominent objects on the ground is one of the fundamental points of the general plan. The chimneys are to be 262 feet high, and about 15 feet diameter inside (14.75 at the top, and 20.35 feet at the bottom). A number of suggestions were submitted in this novel competition, the successful designers being Messrs. Hicou and Demarigny. Their work has the merit of retaining the general appearance of a chimney, instead of masquerading as something else. The shaft is left plain, the ornamentation being confined to the top and bottom. At the bottom, the buttresses which reinforce the stability of the base are brought out by effects in colored tiles, with an ornate pattern carried above the pedestal moulding. On top, a delicate pattern emphasizes the capital, and serves to lighten the effect of the whole. At the top of the chimney there will be a lightning conductor forty-five feet in height. This chimney will be a magnificent piece of architectural work and will cost \$40,000. It will not, however, be the record of erections of this kind. This record belongs to the establishments of Hutte, in Saxony, which disposes of the black fumes at about the height of four hundred feet. It will be instructive to see what French taste can make of this difficult and prominent kind of structure.

The metal shops and foundries of France have profited greatly by the Paris Exposition, in orders for iron, steel and other metals for the buildings of the Champ de Mars, the Champs Elysees and of the Esplanade des Invalides. An approximate estimate of the weight of steel and iron employed in these buildings and palaces has been given out by Commissioner General Picard. This statement says that a total of fifty thousand tons of steel and iron have been put into the work. This is distributed about as follows: In the Alexander III. bridge, moulded steel, 2350 tons, and rolled steel, 4750 tons. In various palaces, 38,000 tons of steel and 3000 tons of iron. Iron for armed cement, 1600 tons. Iron for foot bridges and various uses, 500 tons. Estimating that 1000 tons has been used in the foreign pavilions, the grand total is about 50,000 tons.

The new lines of railroads that have been built and are building in Paris on account of the expected influx of visitors at the Exposition will absorb large quantities of steel

and iron. The Orleans railroad in underground work and new terminal stations have used about 16,000 tons of metal. The Western Co. in improvements and laying additional tracks have used about 9000 tons of steel and iron. The city of Paris in constructing its first section of the Metropolitan Railway system will use 5000 tons. Thus the railway companies of Paris have used or will use 30,000 tons of iron and steel on account of the Exposition. The rise in the price of iron and steel has added greatly to the cost of establishing the Exposition.

An international congress on questions concerning mines and metallurgy will be held from the 18th to the 23rd of June, 1900, in connection with the Paris Exposition. Like similar reunions at the Paris expositions of 1878 and 1889, the congress has been organized at the initiative and under the direct patronage of the French government. In 1878 there were 200 members; in 1889 more than 500 from all the leading countries in mining industry. For 1900 a great effort is being made to secure a representative assembly of the world's engineers and manufacturers who are interested in the progress of mines and metallurgy.

The members of the congress who will receive all its publications are to be: The delegates of French State departments and of foreign governments; donors of at least 50 francs, and the active members, whose subscription has been fixed at 20 francs. The public sessions will be held in the afternoon, alternating between questions of mines and metallurgy. Reports on the questions presented for discussion will be prepared beforehand by the engineers of the different countries and distributed to the members of the congress. Each morning the members in groups under the guidance of engineers and manufacturers specially chosen for the purpose, will study in detail the most notable mining and metallurgical exhibits of the different countries in the Exposition. The common study of improvements realized up to date is to aid the work of the congress in preparing the way for further progress. The organizing committee is particularly anxious to know, at as early a date as possible, the probable number of active members. The following questions are provisionally indicated as the basis of the final program which will be published when the international organization of the congress is completed.

I. MINES.

1. Use of explosives in mines.
2. Use of electricity.
3. Working conditions at great depths.
4. Means of reducing manual labor in the mining industry.

II. METALLURGY.

1. Progress of iron and steel metallurgy since 1889.
2. Applications of electricity to metallurgy. (a) Chemical applications; (b) Mechanical applications.
3. Progress of gold metallurgy.
4. Recent improvements in the mechanical preparation of ores.

The president of the committee of organization is M. Haton de la Goupilliere, director of the Higher National School of Mines. On the committee are represented all the mining and engineering schools and the principal mining and metallurgical companies of France. The secretary-general of the congress is the secretary of the central committee of the coal works of France, M. Groner, 55 rue de Chateaudun, Paris. A special feature of value in the mining and metal exhibit, suggested by F. J. V. Skiff, will probably be carried out. Mr. Skiff is not only director-general of exhibits, but is specifically in charge of the min-

ing and metallurgy exhibit of the United States, as director of that department. In this field America has developed an important literature of value throughout the world, and Mr. Skiff has hit upon the happy plan of exhibiting a special American library of technical works in connection with this department. He proposes to ask from publishers the loan only of such books in these lines as are fully representative of the latest and best work in the field of each, and to group these into a technical library of which a catalogue will be printed giving the publishers' name, price, etc., but having no other advertising features. Similar libraries may form part of other departments, and here there is not only a patriotic but a commercial motive, because in many scientific fields American books are so thoroughly up to date and so far in advance in some respects of the literature of other countries that there should be a direct sale as the result of this exhibit. The plan of Director Skiff will surely commend itself to the metal industry.

A. H. MATTOX.

Pleasure for Employees.

The annual social gathering of the employes of the Sickels, Preston & Nutting Co., was held on the evening of December 15th, at the palatial home of Col. J. R. Nutting. Every employe of the company in the city was there. No other concern in Davenport looks after the happiness and social welfare of its employes as does this company. No house in Davenport has such an Utopian organization. There is no need for the appointment of a "social secretary," at a salary of \$2,500, such as some Eastern houses have recently installed, to look after the social interests of the firm. Every employe of the Sickels, Preston & Nutting Co., is a self-constituted social secretary, and the spirit of happiness and contentment reigns supreme.

Colonel and Mrs. Nutting entertained the employes of the company on the occasion in the manner that has hitherto rendered such events at their home occasions of delight. Cards were the principal feature of amusement, and the playing commenced at eight o'clock. The ladies' prizes were won by Mrs. A. D. Hoagg, first; and Mrs. J. F. Harrison second. Gentlemen's prizes were captured by E. J. Douglass and F. H. Kunkel. Refreshments were served at 10 o'clock.—*Davenport Daily Republican*.

Smith & Hemenway Co.'s New Agencies.

Smith & Hemenway Co., No. 296 Broadway, New York, in addition to the various specialties already handled by them, have just closed arrangements which will enable them to market the entire product of glass cutters with carbon disk wheels manufactured by John Byrnes, No. 72 Morton Street, New York. The different styles are known to the trade as New and Old Enterprise and XXX and Special Black Diamond. Hereafter these goods can be obtained through their regular salesmen, or direct from the company, catalogue of which will be forwarded on application. The Smith & Hemenway Co. have also taken the export business of H. C. Cook & Co., Ansonia, Conn., under their special care and attention, and will thus control for export purposes the output of the Gem Nail Nipper so well and favorably known.

"Those Things We Know About."

The John E. Bassett & Co., "Ye Olde Harde-ware Store," New Haven, Conn. It is customary at this season of the year for this company to issue a very attractive little booklet, in which quaint expressions, interesting pages referring to attractive novelties, and other features of excellence make it so welcome that all of their customers who receive the same read every word of it from cover to cover. That they are justified in doing so, we give below a few extracts from the little pamphlet, which almost car-

ries the mind of the reader back to the first quarter of the present century, instead of making him realize that he is on the threshold of the one soon to arrive. It is written in a manner and printed in a style that should insure it a much larger circulation than we fear it gets.

WHERE LOST KNIVES GO.

The Hades of lost pocket-knives must be a somewhat extensive place, judging from the number of knives that are lost and the knives that are dammed. We may have sold the knives that are lost, but we rarely sell those that are dammed; for, although we cannot guarantee a knife to stay with you any longer than you keep it, we do guarantee all our good knives to give satisfaction—if they won't we exchange them.

WHEN WOMEN WORK.

Whatever a woman's work may be her scissors should be near at hand. They are to her what a knife is to a man. She uses them to make embroidery or draw corks, to open envelopes or to open cans, to cut paper or to prune vines, sometimes even for cutting cloth. To do these things they must be good. We sell the Truly Good. We have no good scissors for ten cents—they don't grow—but we have a hundred odd sizes and patterns of scissors and shears at prices that aren't so very much.

TABLE CUTLERY MANNERS.

One of the earmarks of culture is the proper setting of the table. It is seldom now in good society that one is given a knife with his pie or a spoon with his hash. Yet it is not necessary that your table cutlery, in order to be correct, should be expensive. There is nothing so good for cutting meat as a steel-bladed knife, while for dessert a plated blade is preferred. We have both kinds in celluloid, ivory, pearl and silver handles, and can show you some beautiful patterns. The prices are not high.

He Likes the Wire Straightener.

Most manufacturers like a testimonial from their patrons, which tells a little story of its own. It would be hard work to say more in favor of a meritorious article than will be found in the following:

Chandler & Farquhar, 34-38 Federal Street, Boston, Mass. Gentlemen:—Enclosed find \$9 to pay for Wire Straightener. We used it on last Saturday for the first time. Two men drew from the coils 17,000 feet of No. 8 steel wire through the machine which made it perfectly straight, and cut the same into 10,100 pieces in eleven hours. In the old way it would have taken one month's work to straighten the wire. I would not take \$50 for the machine if I could not get another. When anyone wants to know what work they do, refer them to me.

SAMUEL BALL BOVEE, Cogan Station, Pa.

"Have One With Us."

Among the Christmas novelties which are now being showered upon the Hardware dealers throughout the United States, we have been favored with one of exceeding good taste, and extremely handsome appearance in the shape of a pocket cigar holder, made out of fine calf, intended to hold three cigars, and has impressed on the side thereof in gold ornamentation:

1880—Christmas—1900.

Have One With Us.

Troy Nickel Works, Albany, N. Y. Always Cold. The above comprises their well-known trade mark, and makes an exceedingly bright advertising design.

A curious story comes from Turkey. A German firm sent some textile goods wrapped in old newspapers. The Custom House officers noticed this fact and informed the censor, who promptly decreed that the articles had to be unpacked and repacked without the newspapers, and this was done.

The largest monument in the world is in Washington,

Export Notes.

O. F. Walker, of Worcester, Mass., will soon ship a large lot of electric chucks to Paris and Brussels.

Prentice Bros. & Co., of Worcester, Mass., will soon make an extensive shipment of machine tools to France.

The Ferracute Machine Co., of Bridgeton, N. J., is about to make a shipment of steel metal tools to Paris.

William G. Le Count, of South Norwalk, Ct., has under way a number of machinists' tools for export to Belgium.

The Buffalo Forge Co., of this city, have ready for shipment a large lot of heating and ventilating appliances to Paris and Brussels.

Beaman & Smith, of Providence, have a number of orders in hand for heavy boring machinery, which will eventually be installed in Belgian iron works.

The Standard Pneumatic Tool Co., of this city, is about to forward some hundred pneumatic tools of various kinds to Belgium and French industrial centers.

The New Haven Manufacturing Co., of New Haven, Conn., will very shortly ship a number of friction pulleys and other specialties to Charles Churchill & Co., Ltd., of London.

The H. W. Johns Manufacturing Co., of this city, is engaged in exporting large lots of its asbestos and other specialties. A shipment will be made this week to Christiania, Norway.

The Russell & Erwin Manufacturing Co. of this city have been shipping considerable miscellaneous Hardware to German commission houses doing business in the Philippine Islands.

The Chicago Pneumatic Tool Co., of this city, will forward a large assortment of pneumatic tools for the machine shops of the Sao Paulo Electric Light & Power Co., of Sao Paulo, Brazil.

The Norton Emery Wheel Co., of Worcester, Mass., is about to make a shipment of goods to J. W. Horne, of Yokohama. Mr. Horne is now in this country engaged in making heavy purchases.

The Parlin & Orendorff Co. have recently shipped the first steam plows ever forwarded from this country. They were sent to the Hawaiian Islands, where they will be used on new sugar plantations.

The Geometric Drill Co., of Westville, Ct., contemplate soon to make a consignment of tools for screw machines, adjustable milling tools and other specialties. They will go to French and Belgian ports.

The Hilles & Jones Co., of Wilmington, Del., has just made a shipment of a large punch and shears to Port Arthur, where the machine will be utilized in the marine department of the Chinese Eastern Railroad.

The Contractors' Plant Manufacturing Co., of Buffalo, N. Y., have ready for shipment a lot of derrick fittings intended for the Sao Paulo Electric Light and Power Co., which is an American-Canadian syndicate engaged in constructing a large water power plant and overhead trolley road to Sao Paulo, Brazil.

Francis J. Lowe, the new representative in this city of Hench, Dromgold & Co., manufacturers of agricultural implements, speaking recently of the outlook for export trade during the coming year said:

"Notwithstanding the enormous rise in the prices of raw

material and the consequent advance in the quotations of implements and machinery in general, the export orders already in hand exceed the entire foreign shipment made during the whole of last season by fully 20 per cent."

The services of F. C. Kretschmer, recently New York representative of the Brown & Sharpe Manufacturing Co., of Providence, have been secured by Gustav Diechmann & Co., who are known as among the largest importers of American machine tools into Germany. Mr. Kretschmer will have an important position in the Berlin shops.

Philip Jones, who was the former local representative of Hench, Dromgold & Co., recently departed on a business tour around the world. He has made arrangements to act as the company's representative in Australia.

Mr. Jones' headquarters will be at Sydney. He will also represent there the following firms: T. Rowland & Son, shovel manufacturers, of Philadelphia; the York Ice Machine Co., of York, Pa.; and the Reading Cycle Co., of Reading, Pa. The United Export Agency has also intrusted him with the sale of its sewing machines for the Australian territory.

Pigeongrams.

Something quite unique in the way of postage stamps is that used in the pigeon post of Great Barrier Island. There is no telegraph cable to Great Barrier Island, which is some distance from the New Zealand coast, and the ordinary mails for letters are infrequent and uncertain, so that a pigeon post has been established since November, 1897, and has been successfully worked ever since. The pigeons are sent out from Auckland by vessels as occasions offer, and liberated when messages are required to be sent. These messages, which are called "pigeongrams," are written in pencil on the thinnest of tissue paper slips, about 8 inches by 3 inches, the address being at the top, and the postage stamp is affixed on the message itself and obliterated, as, of course, envelopes cannot be used. The charge of one shilling per message includes delivery in any part of the colony.—*Valparaiso (Chili) Times*.

The Ironville Hardware Association.*

"The Ironville Hardware Association" is the title of a pamphlet the contents of which consist of a series of sketches which appeared serially in the columns of our contemporary *The Iron Age*, during the earlier part of the present year.

It makes a book of about eighty pages, the twenty-five chapters of which being devoted to the doings of five Hardware dealers in an inland factory town. They organized a system of co-operation and were enabled to do away with the disagreeable features of a profitless aggressive competition, finally doing as successful a business in point of volume, at profits very largely increased through the harmonious feeling toward each other obtained by a system of organization worth imitating in the primitive manner outlined.

"The lesson of the story is that through co-operation and mutual trust born of a better acquaintance through frequent personal contact for consultation and discussion many trade abuses, including unreasonable price cutting, were discontinued or abated."

It forms a very interesting little narrative, written by an expert who is fully up-to-date, and knows whereof he speaks; it has a vein of humor running through it that makes the reader thoroughly enjoy the recital and the man who doesn't send for a copy makes the mistake of his life.

*The Ironville Hardware Association. David Williams Co., Publishers and Booksellers, Nos. 232-238 William Street, New York. Price 25 cents, postpaid.

THE PAN AMERICAN EXPOSITION, 1901.

The Board of Architects of the Pan American Exposition, which will be held at Buffalo, N. Y., on the Niagara Frontier during the summer months of 1901, is composed of eight members; three residents of New York, two of Boston, and three of the City of Buffalo.

The architects of the three buildings herewith are:

Mr. Walter Cook, of the firm of Babb, Cook & Willard, New York, designs the Stadium, the Screen in front of the

portation and Electricity Buildings of the Pan American Exposition.

Carleton Sprague, Chairman, Buildings and Grounds Committee.

MACHINERY AND TRANSPORTATION.

The Machinery and Transportation Building, 500 by 350 feet, faces on the Mall. This building is designed in a type of Spanish Renaissance, with initial inspiration in the

COPYRIGHT, 1899, BY PAN-AMERICAN EXPOSITION CO.

THE MACHINERY AND TRANSPORTATION BUILDING.

Railway Station, and the Entrance of the Midway; all of these forming the Plaza. Messrs. Babb, Cook & Willard are the architects of the New York Life buildings in St. Paul, Montreal, Minneapolis and Kansas City. They are now building a new residence for Andrew Carnegie on Fifth Avenue, New York. Mr. Cook is president of the New York Chapter of Architects and was the only American on the commission which met at Antwerp and San

Mission Buildings found in Mexico and California, supplemented by later examinations of Renaissance work in Spain, modified to suit the conditions of the Exposition with its gay and festive surroundings.

An early traveler writes: "The Mission Building is in the form of a hollow square, along the front of which a gallery extends. The edifice, a single story high, is raised a few feet above the ground. In the interior is a court

COPYRIGHT, 1899, BY PAN-AMERICAN EXPOSITION CO.

THE HORTICULTURAL, GRAPHIC ARTS AND FORESTRY BUILDING.

Francisco to decide the competition for plans for the University of California. Mr. Cook studied under Vaudremer.

Mr. R. S. Peabody is a member of the firm of Peabody & Stearns, of Boston, who were the architects of Machinery Hall at the World's Fair. They built the Union League Club in New York, and the Old South Church in Boston. Mr. Peabody studied in Dumais's atelier. He has designed the Horticulture, Graphic Arts and Forestry buildings for the Pan American Exposition.

Mr. Edward P. Green is a member of the firm of Green & Wicks, of Buffalo. Among their works are: the new Buffalo Savings Bank, Albright Memorial Library, at Scranton, Pa., and the Syracuse University Buildings, at Syracuse, N. Y. They are the designers of the Machinery and Trans-

adorned by a fountain and planted with trees. For the erection of the buildings large beams were transported from the mountains, and the Indians taught to burn lime, cut stone, and make brick and tile."

Briefly stated, the Machinery and Transportation buildings form a hollow square, with arcades on all sides. In the interior is a court 100x200 feet, adorned by a long pool of water, with a fountain surrounded with shrubs and flowers, artistically planted. This sheet of water, with its calm reflection and its atmosphere of quiet restfulness, forms one of the many little oases planned for the refreshment of the weary sightseer.

If we add to the traveler's description that the roofs are of red tile, the walls of cement, the work is more orna-

mented, the structure covered with glowing colors, we have briefly a correct description of this building.

The facades present an arcaded effect corresponding in appearance to mission cloisters; the eaves with great overhangs, add to the picturesque. Each facade is broken by an important architectural feature, and each corner flanked with low pavilions, the design giving large plain surfaces for color, while the eaves give deep shadows.

The color scheme is made up in reds and yellows, light in tint.

The Loggis, Balconies, Pavilions and other places are to be ornamented with shrubs, vines and flowers, blending with the coloring of the building.

The openings are griled with specimens of wrought iron "Bejas" or grill screens, such as are seen in examples of Spanish architecture of the 16th century.

The building has numerous entrances, the principal ones being in the centre of the four facades. Once inside the structures the size will be appreciated.

All the towers, pavilions, and other proper spaces are to

Building are two colored compositions representing Ceres, the Goddess of the Harvest, bearing in her arms a sheaf of golden wheat. Her chariot is drawn by three lions led by Flora and Primavera.

The decoration of the Graphic Arts and Forestry buildings is chiefly confined to the vaulted ceilings of their loggias, where the brilliantly-colored decorations remind one of the famous example of the Villa Madama.

THE PLAZA.

The Northern part of the exhibition ground is occupied by a square about five hundred feet from east to west and 350 feet from north to south. The buildings bounding three sides of this square and the arrangement of the square itself has been given to Messrs. Babb, Cook & Willard, of New York, and the style adopted—a very free version of Spanish architecture—has suggested the name of the plaza, which has been given it. The central portion of this square is occupied by a terrace only very slightly raised above the surface of the square, and surrounding a sunken garden, in the middle of which is a band stand.

COPYRIGHT, 1899, BY PAN-AMERICAN EXPOSITION CO.

THE PLAZA.

be brilliantly illuminated, and made gay with banners and flags.

HORTICULTURE, GRAPHIC ARTS AND FORESTRY.

The three buildings for Horticulture, Graphic Arts and Forestry, of which Messrs. Peabody & Stearns are the architects, form a picturesque group at the end of the West Garden.

The largest of these, the Horticultural Building, stands between the other two on an axis with the Garden. The Forestry Building is on the north side; the Graphic Arts on the south, adjoining the Lake. Arcades connect the three buildings, forming in front a semi-circular court. Between the arcades the ground rises slightly to the level of the Fountain of the Seasons.

The area of the Horticultural Building is 45,000 square feet. The Graphic Arts and Forestry buildings each cover 30,000 square feet, and are similar in design. In plan, the Horticultural Building is square, with central lanterns, rising to a height of 240 feet at the intersection of the four arms of a Greek cross, which includes in its angles four small domes. On the center of each facade is a deeply recessed arched entrance.

The Graphic Arts and Forestry buildings have four corner towers, and on the east facade a vaulted loggia of three arches forms the main entrance. Above the red roofs of Spanish tile, numerous lanterns, pinnacles, and Venetian flagpoles, from which float gaily-colored banners, add a festive picturesqueness to the sky-line.

The broad white wall surfaces are ornamented with colored bas-reliefs. Arabesques of twining vines of fruit and flowers, among the branches of which are children and birds, decorate the numerous pilasters of the facades and arcades. Above the eastern entrance of the Horticultural

The terrace, as well as the garden itself, will afford a large space for listeners who attend the concerts which it is proposed to give.

Outside, and at the north of the Plaza, is the railway and trolley station, from which it is supposed the greater number of visitors will enter the exhibition grounds. The railway station itself is masked by a colonnade flanked at either end by two colossal arches, one for those entering the Exposition, and the other for those leaving it. This colonnade bounds the Plaza on the North. It is surmounted by a trellis which it is proposed to cover with vines of various sorts.

The west side of the Plaza is bounded by a building which is to serve as a large restaurant. The public pass through the lower arches of this building, which are open, in order to reach that portion of the Exposition which is to be called Vanity Fair, and which corresponds with the Midway Plaisance at Chicago. The restaurant building itself is two stories high and is about 350 feet long.

On the east side of the Plaza is a building closely resembling the restaurant, which serves principally as the entrance to the Stadium or athletic field, although portions are also used for exhibition purposes. This also has two stories, the upper story being a large open gallery, from which views of the Plaza on the one side, and the Stadium on the other, are afforded.

Finally, the south side of the plaza is bounded by the Electrical Tower, one designing of which has been given to Mr. Howard.

The Stadium, or athletic field, has been in all its details a subject of careful study. It resembles in a general way that erected at Athens a few years ago, although this one can be, of course, only a temporary structure. It will

contain easily 25,000 spectators, and is intended as a model of what it is hoped may be executed some day in permanent form. It has a quarter-mile running track and a sufficiently large space in the inside of this for any of the athletic games. Great attention has been paid to having a large number of aisles to reach the seats, and in addition to the principal entrance on the west, there are provided seven large exits. These exits are made of sufficient breadth and height to admit in case of need the largest vehicles or floats, as it is proposed to use the Stadium for certain pageants, exhibits of automobiles in operation, judging of horses, live stock, agricultural machinery, road machinery, etc. No exhibitor has ever had such a splendid arena in which such exhibits can be displayed, and the Athletic Carnival to which the Stadium is particularly devoted is expected to be one of the most interesting features of the exhibition. The space under the seats is to be used for exhibition purposes, and is in itself the equivalent of a very large building.

The total length of the Stadium, including the building which forms the entrance, is about 870 feet, and the breadth about 500 feet.

Advertisers' Corner.

It is all nonsense to talk about a trade paper being no good as an advertising proposition. There couldn't be a better medium, for the very good reason that the trade paper goes straight to the man you want to reach, and gets far more attention and thought from him than any other publication possibly could.—*Charles Austin Bates.*

You may have the finest goods and the lowest prices on earth, but the buyers haven't got the time to come around and see whether you have or not.

The man who tells them what he has to sell, why it is good, and just how and why he is able to make low prices, is the man who is going to get the business.—*Charles Austin Bates.*

In writing an advertisement, try this recipe: Jot down all the hard-hitting things you want to say, all the things that give specific information about the article you wish to advertise. Then cut out all the drift-wood, all the superfluous words and weak sentences, leaving a terse, plainly-expressed, easily understood argument. Give instructions to have it set in good, plain type, with a display heading or illustration which bears directly on the matter, and you will have an advertisement that will make buyers.—*The Wheel.*

Like the continuous dropping that wears away the stone, systematic advertising in an artistic way, day after day, year in and year out, becomes part of the reading matter of the great newspaper. "You never miss the water until the well runs dry." Newspaper readers do not know, perhaps, how much entertainment and benefit they get from the advertising columns until they think about it. Then they realize that all these merchants who, day after day, talk to them through the newspaper columns are their friends and pleasant acquaintances, and they act accordingly.—*Indianapolis News.*

The trouble with most advertisers and advertising writers is that they have not the newspaper sense of what is "news." Items of knowledge that would be of the highest interest to the persons they are talking to are so familiar to the advertiser himself as to seem commonplace and hardly worth speaking of; yet it is probable that the average man knows nothing regarding it and would be thankful for the information. One advertiser of wide experience, who has been very successful in the preparation of "newsy" advertisements, makes the practice of finding

out just what his friends and acquaintances know concerning his goods, and their method of manufacture. Wherever he finds the slightest degree of ignorance he promptly starts a "campaign of education."—*Advertising Experience.*

He who thinks that because he has something to sell which people will want there is no need to advertise is not wise.

People will traverse in search of gold regions where never the foot of white man trod, but no man was ever known to make a tour of factories, warehouses and stores in search of something he never heard of before.

It is only after he has seen a thing advertised that he wants it, and if he wants it, he gets it, provided he has the means, and the price is right.

If you have a good thing in your factory, warehouse or store, do not put it under a bushel; turn the light of advertising upon it.—*Hardware & Metal.*

Good Liars Come High.

"If I hire you," said a Hardwareman to a boy who had applied for work, "I suppose you will do as I tell you?"

"Yes, sir."

"If I told you to say the razor was a 'Wade & Butcher' when it was low Dutch what would you say?"

The boy did not hesitate a moment.

"I'd say it," he responded promptly.

"If I told you to say the pocket knife was a 'Wostenholm' when you knew that it had 'Made in Germany' on the wrapper, what would you say?"

"I'd say it."

"If I told you to say that the shovel was best cast steel, when you knew it was only 'Open Hearth,' what would you say?"

"I'd say it."

The merchant was nonplussed.

"How much would you work for?" he inquired, very seriously.

"One hundred dollars a week," answered the boy, in a business-like tone.

The Hardwareman came near falling from his stool.

"One hundred dollars a week?" he repeated in astonishment.

"With a percentage after the first two weeks," said the boy, coolly. "You see," he went on, "first-class liars come high; and, if you need them in your business you've got to pay them the price. Otherwise I'll work for \$3 per week;" and the boy caught the "ironmonger" at his own game, and got the job at \$3 per week.

The Corliss Engine.

Corliss, when 30 years old, had not studied steam engineering, says the *Providence Journal*. He came to Providence for the purpose of manufacturing a sewing machine, and was diverted from his purpose by an exigency in the engine shop in which he was seeking information. He directed his attention to the improvement of the steam engine, and the changing of the attachment of the James Watt regulator to a liberating valve gear was the result. This improvement gave uniform speed by automatically regulating the power to correspond with the work, and for the first time cotton mill machinery was driven without jerks, the Corliss engine materially helping to establish the cotton industry on a profitable basis.

Roughly speaking, the British Empire extends over one continent, 100 peninsulas, 500 promontories, 1000 lakes, 2000 rivers and 10,500 islands. The Assyrian Empire was not so wealthy as this is. The Roman Empire was not so populous. The Persian Empire was not so extensive. The Spanish Empire was not so powerful.—*Exchange.*

NEW GOODS AND SPECIALTIES.

Columbia Vernier Caliper.

E. G. Smith, Columbia, Pa., among the many specialties in fine mechanical tools manufactured by him for all trade and scientific purposes, finds an extended sale for the Vernier Caliper with clamp and screw adjustment for fine measuring, which we illustrate in this column. These instruments are accurately made from fine steel, and

the measuring points hardened for wear. The graduation is made into all required divisions of 1 inch, 1-8, 1-16, 1-64 and 1-100; also as fine as one thousandth of an inch. They are also graduated in millimeters, and divided into tenths of millimeters and hundredths by means of the vernier. They are made in a great variety and in a number of sizes suitable for all possible requirements, and the manufacturer will be pleased to send his illustrated catalogue, upon application, to anyone interested.

Cleveland "Ball-Bearing" Tackle Block.

The Cleveland Block Co., Cleveland, Ohio, have placed upon the market a new application of the old principle of ball bearings, which they now apply to rope sheaves and swivel hooks, the result being a ball-bearing tackle block, which it is claimed is as strong as a plain bushed block and vastly easier to work, as well as infinitely more durable. The construction is shown by the accompanying engravings, and will be found to be extremely simple. As the sheaves made by this company are interchangeable, the trade will not be obliged to carry an assortment of shells as previously, but can substitute roller bushed, self-lubricating, or plain sheaves, if any of those varieties is preferred. This interchangeable feature is a very desirable one, making a much more limited stock in the dealer's hands necessary for his trade, and enabling a much wider distribution of this important product. The application of

the ball-bearing feature to tackle blocks has been covered by letters patent. The Upson-Walton Co., Cleveland, Ohio, are general sales agents.

Positive Expansion Bolt.

Daniel C. Seaman & Co., No. 1638 Hutchinson street, Philadelphia, Pa., are placing upon the market an improved expansion bolt, which is known as the "Positive." Of the many expansion bolts that have been placed before the Hardware trade, it is claimed that this possesses a greater improvement over all previous methods and appliances in fastening that have so far been invented. The great previously existing evil, that of the bolt slipping in its fasten-

ings, the inventor feels has been entirely overcome in the construction of the Positive Expansion Bolt, because by its peculiar construction the bolt actually becomes firmer and more positive in its hold the more the strain is increased. It is claimed that it cannot under any circumstances possibly give way. The uses have been greatly increased to

which expansion bolts may be applied, and while at first they were used more particularly for fastening iron to stone or brick work, and a few similar applications of that character, they are now applied to guys for smoke-stacks, fire escapes; for fastening engine beds to solid rock or masonry; to bridge work in many ways, buoys, window and door frames, elevator tracks in buildings, and an annually increasing variety of work to which this peculiar appliance is a positive advantage. It is very simple and easily applied, and can accomplish by its rigidity of application a feeling of superiority over anything else on the market. It is made in a number of varieties which are fully illustrated in the catalogue of the manufacturers, the illustration given herewith being only one of the number.

"Red, White and Blue" Assortment of Tacks.

The Harriman Tack Co., Harriman, Tenn., who are introducing their tacks to the Hardware trade in a number of special assortments, are interested in the "Red, White and Blue" miniature keg assortment of their needle-point carpet tacks, an illustration of which is herewith given. This assortment is packed one-half gross in a box, and contains 16 kegs of 6 ounce tacks, which are discriminated by red labels; 32 kegs of 8 ounce, having white labels; and 24 kegs of 10 ounce, with blue labels. The advantage of this

method of discrimination is that the color at once designates the size of the tack wanted. Each keg contains three ounces of either bright or blued tacks as desired, and the tacks in their construction have points that are as sharp as needles, with light bodies and round, smooth heads. In fact, when properly displayed upon a dealer's counter, this assortment presents a very attractive appearance. Although the National colors on the labels would seem to make it a strictly American assortment, the manufacturers state that through the medium of their advertising in trade journals they are having a large export demand for this, as well as other assortments, to which attention has been called. It is thoroughly understood that these are popular forms of

displaying their product that has met the approval of the trade, and to that extent has largely increased the sale thereof. They desire to market their goods entirely through jobbers in any specified territory, and trust that their efforts to cater for the trade in this manner will be appreciated by the wholesaler.

Easy Spring Hinge.

The Easy Spring Hinge Co., Shelby, Ohio, are distributing through the Hardware trade a new double acting spring hinge, which is shown in the accompanying illustration. It is a hinge that is readily detached, and each part can be put on separately, and then coupled together, the

door being centered subsequently by the screws in the cover-plate, which can be accomplished after it is hung. It has a very easy method of giving tension to the spring, it being adjusted by a screw in the end of the center-plate, which governs entirely the swing of the door, and relieves the regular screws from all strain. It is claimed by the manufacturers that there is no swinging back and forth by the door, as the peculiar construction of the hinge is such, the pressure being equalized at all points, the door is permitted to center in a slow and positive manner. Then again it is claimed that once adjusted the door will always be found to be in line. As the parts are all concealed, there is no sagging of the door, for whether the spring be tight or loose, the hinge swings upon a fixed point. The manufacturers will furnish circulars and other information covering this improved hinge upon application.

Never-Break Sled Skates.

The Avery Stamping Co., Cleveland, Ohio, are presenting for the attention of the Hardware trade what may be called a very seasonable novelty, which we illustrate herewith. It is marketed under the name of the Never-Break

Sled Skates, which are intended for the use of the little ones, as there are enough skates already on the market, no doubt, for the older boys and girls. But with the Never-Break, it is claimed by the manufacturers that the child four years old could learn to skate successfully. Even in the back yard of an ordinary residence an ice pond could be made on which the smaller children of the household could thoroughly enjoy themselves under the eye of their maternal parent, without danger of sprained ankles, or the natural fear of being brought home in a drowned condition from having fallen through some large pond. It would look as though these would become quite salable wherever

they are introduced, as their extreme simplicity for sidewalks and little private ponds, as above suggested, can be readily understood. They are made in four sizes, viz.: 6, 7, 8 and 9-inch, and are finished plated, complete with straps, and packed one pair in a box. It is the intention of the manufacturers that they should retail at about 50 cents per pair, although the discount from that price to the trade is a very liberal one. Further information will be furnished by the manufacturers on application.

Revolving Window Fixtures and Sash Lock.

The New Century Mfg. Co., No. 48 East Eighth Street, New York, have recently placed upon the market the

FIG. 1.

Automatic Revolving Window Fixtures and Sash Locks, which we illustrate herewith. The Automatic Revolving Window consists of an automatic revolving fixture, by means of which the outside of the window becomes the inside, and this makes it possible to clean all windows entirely from the interior of the house. The fixtures are made of best material complete and ready to affix to any window frame, whether new or old, the special feature being the ease with which they can be applied to old work by simply removing the stop bead. A patented automatic

FIG. 2.

latch prevents the sash being turned, except at indicated points, thus obviating any danger that might be caused by the sash being revolved through accident. Among the advantages claimed to result by the use of these fixtures, it may be mentioned, perfect ventilation is assured in cold or stormy weather; when closed, window is storm and dust proof; windows are entirely free from rattling, as the device automatically adjusts itself to the shrinking and swelling to which the best of wood material is subject. Among the other advantages are freedom from liability to accident in window cleaning. Step ladders, window seats,

safety apparatus or expert cleaners are not deemed necessary, while ventilation can be had even in rainy weather, as the relative position of both sashes can be reversed, and either or both sashes turned at almost any angle, permitting perfect ventilation at top and bottom and center if desired, as will be noted in Fig. 1. Strips of thoroughly seasoned wood to which the sash is pivoted at center on both sides are fastened to regular sash cord and weight, and move up and down with the sash, entirely concealed from view. Adjustable curved flat springs press bars tightly against sash, making window dust-proof, storm-proof, etc. The device is applicable to either single or double sash. Another device which can be supplied if desired is a safety bolt which prevents any revolution of sash except when withdrawn, together with an automatic adjustable friction pivot designed to hold the sash at any desired point. An automatic roller latch and slide bar holder is made to automatically release the latch and permit the window to revolve when brought to a certain indicated point. The fixtures are made in many styles suitable for the plainest or most ornamental inside finish, trimmed with steel or brass Hardware. It can be furnished nicked, bronzed or oxydized, attached to oak or maple sliding bars all ready for instant application.

Ball-Bearing Feed Grinder.

The Sundries Mfg. Co., South Bend, Ind., are manufacturing a Feed Mill of an entirely new construction, and which will commend itself to the interests of the trade upon investigation. An illustration is herewith given of the same, this being a side view. The manufacturers state that this mill was invented by a practical man for his own use, and after its construction had been thoroughly proved by practical machinists and mechanical engineers, it was brought out for a more general use. It is provided with a shut-off in the feed, which permits it to be reduced or increased in capacity as desired, dependent entirely upon

the amount of power which may be applied. Among its important features may be mentioned the fact that all parts exposed to friction are supplied with ball bearings. The whole mill is made of cast iron, except the hopper, which is of sheet steel. In its construction care is taken that in the operation of the mill it runs very easily, and requires but little power, and is claimed to possess the best cob breaker thus far brought out in the new methods of grinding corn. The manufacturers state that in its operation there is no fear of its choking, as it not only grinds rapidly but finely. In the illustration we give, the cob breaker for grinding

corn cobs is shown in gear, which it is claimed grinds equally as well all small grains. The manufacturers are willing to give control of the sale of this mill in special territory, and would like to receive applications for the same from parties interested.

Omega Odorless Gas Stove.

The W. M. Crane Co., Nos. 1131-1133 Broadway, New York, are noted for the number of gas appliances in the way of heaters, etc., that they are placing upon the market, and to which they desire to call the attention of the

Hardware trade carrying specialties of this description in stock. One of the latest additions to their line we illustrate herewith. It is marketed under the name of the Omega Sanitary Gas Stove, and is claimed by the manufacturers as marking a revolution in gas heating and household sanitation, from the fact that its operations combine three important factors: Economy of fuel, perfect combustion and sterilization. In the Omega they are said to be the result of mechanical combinations produced as the result of extensive scientific research. Economy in the use of fuel while of great importance, is with far too many persons of the first and greatest consideration. It is, however, achieved in the Omega as a result of the second factor—perfect combustion, together with the remarkably simple and highly ingenious manipulation of the air currents. By the generation of intense heat, and the thorough mixing, progressively, of the gas supply with air, perfect combustion is claimed to be secured. By this method it is possible to use forty-five cubic feet of air to every cubic foot of gas, and although the super-heating of the main supply currents before combination with the flame currents is said to obviate the chilling of the burning gases before they are entirely consumed, they prevent the escape of the residue of poisonous products which are a menace to life and health. Consequently sterilization is accomplished, and by this improved method of construction all fear as to the air of the room not being sufficiently purified is entirely banished. As the air of the room is rapidly drawn through the stove it is purified, and the rapid expansion and contraction in volume being kept at a normal degree of humidity, gives a pleasantly moist living atmosphere at a well regulated temperature.

A curious novelty is a clock let into the sidewalk. The dial consists of a glass plate through which are seen large numbers denoting the hour and minutes. The upper line changes every hour, and the lower every minute. The figures are operated by electricity and are controlled by a master clock inside the store. The numbers are carried on celluloid ribbons, which are fed by proper mechanism. —*Scientific American*.

Competition is now the death of competition. The positive relegates the negative.

RECENT TRADE PUBLICATIONS.

PHILADELPHIA LAWN MOWER CO. Pamphlet catalogue of the "Genuine Philadelphia" lawn mowers, consisting of 40 pages, 7x11 inches in size, enabling the company to display in a very attractive manner a number of illustrations of different points of interest in Philadelphia and vicinity, by the aid of excellent half-tone illustrations, showing institutions, historic buildings, hospitals, naval homes, United States arsenals and private residences, together with a number of views in Fairmount Park, all exceedingly attractive in appearance, and in the front of each one of these illustrations is shown one of their numerous styles of mowers, with a suggestion as to its application for the purposes intended. This is a very happy thought in connection with the illustration of a catalogue of this kind, because not only is the eye pleased with the picture, but the application of the mower to the purposes intended is graphically described. This company, backed up by thirty-one years' experience in a large line of lawn mowers, market them in a number of styles designated by letters, which have been well known to the trade for a series of years. In addition to their regular line designated in that manner, they also make the Gold Coin, Drexel, Dewey, the XX, the Two-Man or Pony, and the Pony and Horse Mowers that have been an established product with them for years. They also include in their assortment a horse lawn sweeper, a grass collector, lawn sprinkler, etc., etc., and have also added to their line a roller-bearing lawn mower, style K, with which the catalogue is completed. These goods have been known for years under the name of the "Genuine Philadelphia," and it is doubtful if there is a Hardware store in the United States that is not familiar with that designation. It is a catalogue that every Hardwareman should possess, no matter what line of goods he handles.

CHADBORN & COLDWELL MFG. CO., Newburgh, N. Y. Pamphlet catalogue of 24 pages, covering the line of lawn mowers that has been marketed under the name of the Chadbourn & Coldwell Mfg. Co. from the earliest date in lawn mower history. They call attention to the fact that "having been manufacturing lawn mowers for more than thirty years, we may be relied upon to furnish nothing but strictly high-grade lawn mowers, as the employes in every one of the varied departments through which a lawn mower passes, have become experts in their labor, and in connection with the latest improved machinery, enables us to so organize and systematize the manufacture that it is practically impossible to send out a lawn mower that will not give entire satisfaction." The varied styles of mowers manufactured by the company are marketed under the names of the New Model, New Model High Wheel, Excelsior Roller, New Excelsior Horse, Excelsior Roller Golf, The Rival, The Rival High Wheel, The O. K., and The Royal Blue, which latter is a new ball-bearing mower, to which they call especial attention. This wide variety of mowers covers every possible demand from the Hardware trade in every section of the country, and before ordering for the season's supply, the catalogue should receive consideration by the Hardware trade handling mowers, as some one or more of the various styles might be added even to an assortment already considered complete.

The Excelsior Roller lawn mower, although produced by this company nearly thirty years ago, still retains in many sections a circle of admirers that believe nothing better was ever made, its peculiar construction being such as to

commend it for various purposes which the lighter mowers are not designed to fill. The company has been successful in establishing a large export trade on their line of goods, which has been catered to with intelligence, and is regarded to a large extent as being unrivalled from the fact that the company were pioneers in creating a demand abroad for American lawn mowers.

A. TREDWAY & SONS HARDWARE CO., Dubuque, Iowa. Fall circular No. 25 issued recently consists of a pamphlet of 56 pages, full catalogue size, 9x12 inches, in which are well displayed with good illustrations the usual line of goods suitable for the Fall and Winter seasons, commencing with the line of axes with which they have been identified for years under their own trade marks, as well as those represented by other manufacturers' labels, added to which are the hatchets, hammers, coal hods and cover lifters, stove shovels, stove trucks, waffle irons and fry pans, hot air registers, etc., etc., all of which are applicable and desirable at the present season of the year. Included in the assortment, space is given to the supplies needed by the Hardwaremen who are scattered throughout the region to which their salesmen supply goods, among which may be mentioned sheet iron and steel, galvanized iron, corrugated steel roofing, elbows, dampers, tin plate, etc., etc. This is an up-to-date assortment to send to their trade, and is no doubt found exceedingly useful by those receiving it. Included in the assortment which it contains will be found a large line of ice skates, children's sleds, as well as their latest interesting features in the cutlery and plated-ware line, which are all very nicely represented.

BROWN & SHARPE MFG. CO., Providence, R. I. Pamphlet catalogue of 148 pages, being their catalogue No. 101 of machinists' tools, rules, squares, micrometer calipers, gauges, and other accurate test tools with which the name of this well-known company has been identified for years. Among its contents will be found a full line of steel rules in great variety, flat, square or triangular, steel gear rules, shrink rules, caliper rules, straight edge rules, including draughtsmen's, beveled, draughtsmen's open steel triangles, metallic scales, steel squares, Universal bevels, protractors, etc. Included in the assortment is a large and important variety of micrometer calipers, covering every possible want of almost every country on the face of the globe. There is also to be found among its contents gauges of every description, test indicators and gas heaters. Many useful tables covering quantities, sizes, weights, etc. or materials in the use of which these tools are desirable are found among the contents. This is a very important catalogue for the selection of this class of goods, and no Hardware library will be considered complete unless it contains it.

NATIONAL CUTLERY CO., Lehigh Avenue, American and Third Streets, Philadelphia, Pa. Pamphlet catalogue of twenty pages, covering an important line of first quality steel laid shears and snips, including straight and bent trimmers, barbers' shears, bankers' shears, and forged tinners' snips, with straight and curved blades. Included in the assortment they present a line of goods under the name of the "National Low Price," which includes all the various styles that are also made in the higher grade of goods. These goods are furnished to the trade japanned or nickel-plated, as ordered, and seem to be up to date in every particular.

A. J. JORDAN CUTLERY CO., No. 417 N. Broadway, St. Louis, Mo. Illustrated catalogue and price list of 108 pages, covering the goods manufactured by this company in fine cutlery, solid silver ware, silver-plated ware and including a line of goods in rich American cut glass. This is a very complete catalogue, crowded with illustrations which in number are sufficient to make popular a catalogue three times the size. The goods referred to are shown in exceedingly good style with excellent engravings, and connected with each one is the retail price, which forms quite a help to the retailer, enabling the patrons of this company to get a fair average profit, and facilitates the establishing of certain prices for their goods, which would naturally obtain throughout the section covered by their distribution. In the price-list which accompanies the same, net prices are given on every item shown in the catalogue so that in combination the facility of selling the goods is greatly increased. It is a very desirable catalogue, covering the finer grades of goods which the Hardware trade at the present time are adding more or less to their stocks, and the demand for better goods over the ordinary trash sold in previous seasons is assuming increased strength, and it behooves the retail Hardware dealer to cater to the demand and gradually increase the importance of his finer specialties. This catalogue, we fancy, will greatly assist him in the accomplishment of the desired object.

CHARLES PARKER CO., Meriden, Conn., and No. 96 Chambers Street, New York. Pamphlet catalogue of fifty-four pages, covering their line of patent vises, ratchet and geared drills, etc., adapted to locomotive works, car builders, machinists, gun, sewing machine and carriage manufacturers, jewelers and artisans generally. This is a well-known line to the Hardware trade, having been a product of this company for many years, and their claim is that both in strength and finish their aim has been to steadily improve the line in every point where an improvement could be suggested. Included in the assortment will be found Vulcan patent parallel stationary vises, the same with swivel, Parker's patent parallel plain and swivel vises; also their extra heavy railway vise, Hall's Sudden Grip vise; Hall's and Parker's patent jewelers' vises, the Victor extra heavy vises in great variety, the Victor parallel filers' vise, also with swivel; wood-workers' vises and combination pipe vises. The catalogue also embraces the ordinary oval slide and coach vises in great variety; also die-sinkers' adjustable vises, etc. This is a very complete assortment of these desirable goods, and the catalogue is one that should be called for by the Hardware trade generally if not already received by them.

THEO. ALTENEDER & SONS, No. 945 Ridge Avenue, Philadelphia, Pa. Pamphlet catalogue and price list of 112 pages, of drawing instruments, which catalogue is the eighteenth edition issued by this old house. It is handsomely gotten up with miniature illustrations throughout, showing every possible variety of instruments necessary for the work of the mechanical draughtsman or the amateur. It includes all varieties, from the lowest priced, to the finest assortment put up in mahogany cases, and listing at \$100 and upwards. Embraced in the assortment will be found patent joint compasses and dividers in large variety, steel spring bow instruments, spring hinge ruling pens, lever ruling pens, railroad pens and pencils, beam-compasses, micrometer-adjustment beam-compasses, proportional dividers, etc. The assortment is a very desirable one, and no doubt includes everything that is required for the purposes for which these instruments are designed.

THE L. S. STARRETT CO., Athol, Mass. A pamphlet catalogue of 112 pages, on excellent paper, very finely printed, and with first-class illustrations throughout, covering their line of special tools that has been their product for many

years. They are known in the trade as being high grade, every tool being warranted accurate and satisfactory, their quality being also guaranteed. Their line of goods covers, among a very large assortment, steel rules of every description, including straight and beveled edge, hook and shrink rules, desk rules, centre gauges, combination squares in every variety, bevel protractors, combination sets and inclinometers, also try squares and calipers in large variety, including micrometer appliances of a largely varied description; adjustable jaw-cutting nippers, and Universal bevels. They also make an extensive variety of gauges, including pitch, thickness, depth and inspectors' gauges; jack screws and steel clamps, high-grade hack saws and superior nail sets, and centre punches for machinists' use. The catalogue is a complete one, embracing a wide variety of high-grade tools, well worthy the attention of every Hardware dealer who carries a stock of these mechanical appliances.

GRAND RAPIDS REFRIGERATOR CO., Grand Rapids, Mich. Pamphlet catalogue of 120 pages of the extensive and important line of refrigerators manufactured by this company under the many patterns that are known to be embraced and marketed under the name of the "Leonard Cleanable" refrigerator. The manufacturers call special attention to the complete change of style in their wares for 1900, in which they refer to the fact that "the former heavy sunk carving is changed to dainty designs in raised carvings. The bottom and back of the case is now paneled as well as the front." The Leonard system of refrigerators used in the construction of their goods, is dwelt upon largely in the earlier pages of the catalogue, as being on original lines, and deserving of special mention. Included in the contents of the catalogue are all the ordinary low-priced varieties usually sold, together with a number of more ornamental and attractive styles called for throughout the country by conditions of trade that make more extensive ornamentation desirable. The illustrations are first-class throughout, printed on fine paper in two colors, and it would seem as though it would be difficult not to meet the demands of the dealer and consumer in any part of the country.

MANNING, BOWMAN & CO., Meriden, Conn. Catalogue No. 27, oblong pattern, 11x8 inches in size, handsomely printed on coated paper, beautifully illustrated throughout, showing all the latest patterns recently manufactured in their line of goods in nickel and silver plate, also in seamless Ivory Enameled, Perfection granite iron, planished copper ware, etc. This assortment covers an unusually fine line of tea and coffee pots, chafing dishes, bath room fixtures, English pewter mugs, hotel ware, soda fountain accessories, etc. The superb manner in which this volume is illustrated lessens the difficulty very much indeed for a dealer to select goods suitable for his particular trade in any part of the United States. It is a very handsome catalogue, and should be in the hands of every one handling that line of goods to any extent.

Asiatic Lucidity.

The *Calcutta Times* has this paragraph in one of its hotel advertisements:

"Gentlemen who come in hotel not say anything about their meals they will be charged for, and if they should say beforehand that they are going out to breakfast or dinner, etc., and if they say that they not have anything to eat they will be charged, and if not so they will not be charged, or unless they bring it to the notice of the manager of the place, and should they want to say anything they must order the manager for one, not anyone else, and unless they bring not it to the notice of the manager they will be charged for the least things according to the hotel rate, and no fuss will be allowed afterward about it."

(Trade Correspondence continued from page 39.)

THE ALBANY TRADE.

"Merry Christmas to all," is expressed and responded to more feelingly this year than for several decades. Prosperity, though heralded for some time in advance, came with the opening of the year and has remained as a fixture. That it was a most welcome guest cannot be gainsaid. How long the present condition will last is the question appealing to us as the subject occurs to our minds.

There is no fear that a sudden change will occur. The base of manufactured goods or raw material shows no probability of a "sag." The general increase of wages shows strength, and the universal activity prevailing in trade in building and in public works, to say nothing of the expansion of trade both foreign and in our own colonies, presages a continuance of good times for a long period ahead.

It is common report that the closing year will exhibit largely increased sales, tonnage and profits, and the balance very much in evidence on the right side of the ledger.

The mild, clear weather that has prevailed during this ante-holiday period while probably not as favorable for the country districts, has given unlimited opportunity for sales to the city retailers who carry the customary holiday goods kindred to Hardware. The ice and snow that inevitably must come soon, can be depended upon to unload the stocks of skates and sleighs that perhaps have moved rather sluggishly thus far.

The recent advance in general builders' Hardware is accepted with genuine relish on the part of holders of good stocks, and should the strengthening of prices in some lines of mechanics' tools occur about the first of the year, it would not be a great surprise, as these lines have not yet moved upwardly in equal proportion with some standard goods.

Considerable agitation of the subject of terms of sale and cash discounts has been noticed of late. By some manufacturers who adopted the net 30 day terms it is observed that the return to the original terms of 60 days 2 per cent. 10 days has been resumed with a willingness to reward the prompt payer with a premium for his ready payment.

It is not unlikely in the estimation of many dealers that the old terms of 2 per cent. cash will be readopted. This has never lost its popularity with manufacturers as well as prompt paying merchants and ought to be advocated by all live dealers when conferring with those manufacturers from whom they purchase.

As the year closes, collections grow more satisfactory, many no doubt wishing to commence 1900 with clean pages.

ALBANY HARDWARE & IRON CO.

THE PHILADELPHIA TRADE.

The editor of *Hardware* seems to think that, whether business is going on or not, he should have the usual trade letter, although how we are to write about trade when trade may be said not to exist, it is rather difficult to say. It is the old problem of making bricks without straw.

At present, the thoughts of almost all jobbers are much more on stock-taking than on trade, and as we are up to our necks in that heavy and disagreeable task, and as most of our salesmen are off the road, we are more busy with plans for the future than the filling of orders. We do not, however, mean to say there is actually no trade; on the contrary, considering the unusually mild weather, business is keeping up very fairly, although cold weather would probably increase it nearly 50 per cent.

Salesmen are now in the store, helping with stock and overhauling price books preparatory to the new campaign, which is expected to start soon after January 1st.

The outlook for Spring trade is certainly very good, while prices are still maintained and we still find it impos-

sible to get orders filled promptly. We now have on our books specifications placed as long ago as early last Spring and still unfilled, and the tone of the market is firm in consequence.

The most interesting question at present is that of the proper way in which to price stock. Is stock to be priced at the figures now prevailing, or on a lower basis? This is a matter which each dealer must answer for himself, but it is well to remember that no profits are made until the goods are actually sold, and there is an old proverb about not counting chickens before they are hatched, which is now well to bear in mind.

We wish all our readers a Merry Christmas and a happy and prosperous New Year. BIDDLE HARDWARE CO.

THE DAVENPORT TRADE.

The slump in the New York stock market is having its effect on business. A regular carload buyer of nails has just dropped in and said he would not buy a full carload just now, preferred to pay the difference in price between less than carload and carload lots, as he was in doubt about the present high prices being maintained.

One class of politicians says that the almost-a-panic was caused by Congress passing the currency bill. If we had less speculation and less politics we would have more business, more prosperity and much more steadiness in values of every kind, and especially in staple Hardware.

SICKELS, PRESTON & NUTTING CO.

Markets Worth Cultivating.

A hundred million dollars a year appears to be the present market offered to the people of the United States by Cuba, Porto Rico, Hawaii and the Philippines, provided we are able to supply the normal demand in those islands for foreign products. This estimate is based upon their actual consumption in years of normal conditions. How rapidly this will increase remains to be seen, but if the experience of the past year in Hawaii is an indication of what will happen elsewhere the increase must be very rapid. The exports from the United States to Hawaii in the ten months of 1899 whose record is now complete are more than double those of the corresponding months of 1897 and nearly double those of the corresponding months of 1898, while to Cuba they promise to exceed in 1899 those of any preceding year, even surpassing that of the great reciprocity year 1893, when the exports to that island were double the average of earlier years. More than one-half of the supplies which Cuba, Porto Rico and the Philippines have received from other parts of the world in former years have been furnished them by Spain.

Wire Glass Shutters.

Chief Croker, of the Greater New York Fire Department, has declared himself in favor of the wire glass shutter as preferable to the iron shutter now in common use in business houses. His reasons are that the type of shutter now in use hinders the discovery of a fire till the fire fiend crowds his red head through the roof. When the shutters are broken open they are liable to endanger the lives of the firemen below, by falling in sharp and jagged fragments. On the other hand the wire glass shutter, being semi-transparent, tells the tale of a fire in a prompt and unmistakable fashion, and it cannot be sledge-hammered into falling and life-jeopardizing fragments. There is good horse sense in these suggestions that it would be well for business men to consider, for fire hazards are not to be trifled with.—*Exchange*.

The art of paper-making has reached the point where it is possible to cut down a growing tree and convert it into paper suitable for printing purposes within the short space of twenty-four hours.—*Exchange*.

REVIEW OF THE MARKETS.

Hardware: The year is closing with a good business still being done by the trade, no cessation noticeable in the general trend of business. Prices for the last few weeks have been held up, evidently waiting for the first of January to arrive before much attention is given to a general revision, which will undoubtedly be done. Most of the concerns are engaged in taking inventory, with the hope that the results will be of a character that will be worthy of remembrance. Travelers are nearly all to be found in their various establishments assisting in this enjoyable business, and preparing to arrange things so that immediately after the holidays the orders that are not already booked will be looked after by these hustling missionaries. Collections are reported as being in a very satisfactory state.

Wire Nails: From all appearances it is the intention of the American Steel & Wire Co. to close the business for this year without changing the quotations, which we think is a state of affairs that we prophesied in October would result. The stability in this line so long prevailing has been obtained through this method, and stocks will be in good condition to start with in a proper manner after January first. The demand is not an extravagant one, the orders being booked more particularly to make good current assortments. The present quotations are named as follows, f. o. b. Pittsburgh, terms 30 days net:

To jobbers in carload lots.....	\$2.95
To " in less than carload lots.....	2.97½
To retailers in carload lots.....	3.10
To " in less than carload lots.....	3.20

New York prices are represented by the following quotations held firmly:

To retailers, carload lots on dock.....	\$3.25
less than carloads on dock.....	\$3.40
Small lots from store.....	\$3.40 to 3.50

Cut Nails: The market on cut nails has not shown the strength that characterizes that of wire nails, and quotations have been varying in character according to the size of the specifications. The transactions are by no means large, and the following nominally represents the present state of the market, being f. o. b. Pittsburgh, freight being added to make a net price delivered at destination.

To jobbers in carload lots.....	\$2.60
To " in less than carload lots.....	2.65
To retailers in carload lots.....	2.70
To " in less than carload lots.....	2.85

New York business is not very brisk, with prices nominally as follows:

Carload lots on dock.....	\$2.75
Small lots from store.....	\$2.85

Barb Wire: In connection with other wire products, no change has taken place in the price of barb wire, and the indications are that there will be no necessity for making any. The demand is simply normal for this time of the year, and the manufacturers at the present time are only too glad to have an opportunity of heaping up stock in anticipation of the unusual demand made upon them immediately after the holidays. The regular quotations remain as follows, f.o.b. Pittsburgh, net cash 30 days:

To jobbers in carload lots, Painted.....	\$3.40
" " Galvanized.....	3.55
" in less than carload lots, Painted.....	3.42½
" " Galvanized.....	3.57½
To retailers in carload lots, Painted.....	3.55
" " Galvanized.....	3.70
" in less than carload lots, Painted.....	3.65
" " Galvanized.....	3.80

Smooth Wire: The same conditions referred to on other wire products affect the demand for smooth wire. Purchases are only made for requirements of the present time, no great desire being manifested to stock up largely; the trade consequently is limited in its dimensions. Prices continue as previously quoted, f. o. b. Pittsburgh, terms thirty days, net cash:

To jobbers in carload lots.....	\$2.80
in less than carload lots.....	2.82½
To retailers in carload lots.....	2.95
in less than carload lots.....	3.05

The charge for galvanizing is 50 cents on sizes from 6 to

14 inclusive; on Nos. 15 and 16 it is 85 cents and on Nos. 17 and 18 is \$1.10.

Builders' Hardware, Etc.: The leading manufacturers in builders' Hardware, under date of December 15th have made another advance in prices averaging about 11 per cent., to take effect from that date and includes what may be termed as regular Builders' Hardware, applying to door locks, knobs, door bolts, door butts, and all ornamental Hardware of relative significance, but excepts steel squares, shelf brackets, brass butts, padlocks, jack chain, etc., and also the common cast and wrought butts, cupboard catches, etc. All the manufacturers join and are acting together in making this advance, which will undoubtedly govern the transactions of the future. It is intended that new price lists giving revised lists and discounts shall be issued, and distributed with as great a degree of promptness as possible.

Russell & Erwin Mfg. Co., New Britain, Conn., and New York, make the following announcement, which is in harmony with that made by all the larger manufacturers of corresponding goods:

Gentlemen:—We hereby announce an advance of 11 per cent., to take effect from this date, on Hardware of our manufacture, with the exception of door checks, steel squares, steel shelf brackets, brass butts, meat cutters, padlocks, fire irons, jack chain, iron front axle pulleys, escutcheon pins, wire nails, stove pins, agricultural bolts, sleigh shoe bolts, wood and machine screws, stove and tire bolts and nuts.

New price list, giving revised lists and discounts, will be issued and distributed as promptly as possible.

December 15, 1899.

RUSSELL & ERWIN MFG. CO.

Horseshoes: The Rhode Island Perkins Horse Shoe Co., Providence, R. I., announce a further advance in the price of horseshoes, as indicated in the quotations given below, in which the base price is made 3¼ cents per pound. The new prices are as follows: Terms 30 days or 1 per cent. discount for cash in ten days, freight being equalized to point nearest destination:

	Cents per pound
Extra light, light, medium and heavy pattern horse shoes, No. 2 and larger.....	3¼
Long heel shoes, No. 2 and larger.....	3¼
Favorite shoes, No. 2 and larger.....	3¼
Iron countersunk shoes, No. 2 and larger.....	3¼
Snow, road or trotting shoes, No. 2 and larger.....	3¼
X. L. steel horse shoes, No. 2 and larger.....	4¼
Cow Boy shoes, No. 2 and larger.....	4¼
Cow Boy shoes, plain, No. 2 and larger.....	4¼
Thin steel countersunk shoes, No. 2 and larger.....	4¼
Mule shoes, No. 1 and larger.....	3¼
o and oo mule shoes.....	5¼
Jack shoes.....	6¼
Light, medium and heavy toe weight shoes, No. 2 and larger.....	5 35-100
Extra light and light side weight shoes, No. 2 and larger.....	7 1-10
Calked shoes, No. 2 and larger.....	4¼
Calked mule shoes, No. 1 and larger.....	4¼
Goodenough army and heavy patterns, No. 2 and larger.....	4
Winter pattern, No. 2 and larger.....	4¼

The price of all horseshoes No. 1 and smaller is ¼ cent per pound higher than above. It is understood that the foregoing prices represent also those of the Phenix, American, Bryden, Eagle and Standard horseshoes. Similar prices, with a discount of 5 per cent., are made on the Diamond State, Tredegar, Old Dominion, Shoenberger and Crescent shoes.

Planes: Under date of December 8th, manufacturers of wood planes have advanced their prices about five per cent., making present quotations at about the following discounts: First quality, 45&10 per cent.; second quality, 50&10; fancy, 40&2½. Plane irons are quoted at 35 per cent. from list.

Picture Nails, Molding Hooks, Etc.: T. C. Richards Hardware Co., West Winsted, Conn., announce having advanced prices on picture nails, molding hooks and similar goods of their manufacture about ten per cent. over previous quotations.

Tucker & Dorsey Mfg. Co., Indianapolis, Ind., announce having revised prices on their full line of woodenware, particularly money drawers, and are preparing price lists, giving definite information in regard to the same, it being too large a line of goods to quote in the regular way.

The Glidden Varnish Co., Cleveland, Ohio, U. S. A.

Cordage: Remains nominally without change, since previous issue. Demand being nominal. Quotations for carload lots are as follows, with an advance of a quarter of a cent for less quantities, f. o. b., New York, Boston or Philadelphia:

Manila, 7-16 inch and larger.....	per pound, 15½ cents.
" ¾ inch	" 16 "
" ½ and 5-16 inch	" 16½ "
Sisal, 7-16 inch and larger.....	" 10½ "
" ¾ inch	" 11 "
" ½ and 5-16 inch	" 11½ "
" Lath Yarn	" 10 "

Manila Tarred Rope, 15-thread, 15½ cents. Manila Hay Rope, medium, 15½ cents. "A" grade of Jute Rope 7 cents, "C" grade 6½ cents. Jute Wool Twine, 4 ply only, per pound, 6¼ cents; all other sizes, 7 cents.

Linseed Oil: Dean Linseed Oil Co., quote as follows:

In lots of less than 5 barrels	51 cents per gallon.
In lots of 5 barrels or more	50 cents per gallon.
The five-barrel price only applies to deliveries of that quantity at one time.	
Boiled Linseed Oil, 2 cents per gallon higher than Raw.	
Calcutta Oil, 65 cents per gallon.	

THE PITTSBURGH TRADE.

Trade keeps up well for this season of year, this is especially true of the city and manufacturing and mining places. In the coke districts everything is running full and new mines being opened in the new territory so that their requirements are large.

The present flurry in the New York stock markets seems strange in view of the prosperous condition of our railroad and manufacturing interests. Earnings are very large and every prospect of this state of affairs continuing for at least a year ahead.

Mild weather continues up to this writing and interferes with sale of Winter goods. We are hoping for more seasonable weather during the holidays.

LOGAN-GREGG HARDWARE CO.

THE CLEVELAND TRADE.

If Congress attempts to legislate to control combinations and trusts a clear distinction must be made between them and legitimate business. If one railroad buys another, or one mill buys another, this in no sense can be called a trust, unless the definition of the word is to be radically changed. On what ground is it illegal for one organization to purchase all the mills manufacturing the same line of goods if it results in a monopoly for the time being? It is of common occurrence that there is only one manufacturer of an article, as patents given by the government effect this and it is a monopoly.

It would be exceedingly difficult to determine the incentive that induces one mill to buy others in the same business. They say that it is to save expense and make the product at less cost.

The recent advance in raw material has prevented the late combinations making lower prices whatever may have been their intention, and the advance in price is charged as the result of combinations.

One thing, however, legislation can and should do, viz: to prevent the over issue of stock or making it illegal to offer the stock for sale through the stock exchanges when the stock issued is in excess of the capital invested, and these large combinations should be compelled to make sworn statements of their financial condition in January and July of each year, as the purpose of some of them is suspected to be to make paper to sell to the public instead of goods.

The President's message is none too emphatic on this subject, but it requires trained business ability for such legislation, or it will result in injury to business.

That our export trade compels large organizations to handle is demonstrated by the recent action of the ore producers in making price on ore. The large corporations who have mines and vessels are in condition to destroy the smaller companies who must pay the price on ore. Not only the export, but the home trade can be monopolized by the large companies, so that small companies must seek absorption or bankruptcy. Legislation cannot prevent one riding in a carriage and the other carrying a pack on foot, and it would be a pity if they could so long as the purpose of footing it was to secure the carriage later. High civilization limits the need of legislation; increased demand for paternal legislation indicates decay. People whose rights are always being invaded are weaklings. The system of charity in America and Europe produces paupers. When a large class come to rely upon legislation for protection from wholesome struggle, the decay of civilization is sure to follow. The right to pursue happiness is not the gift of it, and it cannot be given by legislation.

The decision in the Addyston pipe case everybody should have expected—that it created a panic in Wall Street shows a lack of intelligence in investors. That decision should have strengthened industrial stocks in companies organized on legal lines rather than have impaired them.

The regular business of the country based on demand keeps a steady pace and is not injured by flurries in Wall Street. There is no break in demand or price that denotes any radical change.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE CHICAGO TRADE.

We are so busy at the present time figuring on our inventory and the closing up of our year's business that we can find but little time in which to make any comments on the state of trade in Chicago at the present time, excepting to state that our business has been unusually good during the closing weeks of the year, also that prices generally have been pretty well held by both manufacturers and jobbers, with a prospect, as we understand it, of some advances in the near future on goods that have not heretofore been advanced to any great extent. From present indications we will enter into the business of the new year with a larger amount of future orders than we have ever had before.

There has seemed to be an enormous demand for lawn mowers, steel goods, ice cream freezers, poultry netting, screen doors and wire cloth. We understand that many of the screen door manufacturers are short in their supply of wire cloth necessary to be used in the construction of windows and doors, and have had applications for large amounts of cloth from some of these people. We also learn through manufacturers of wire cloth that they are already sold ahead for the entire season and that their goods will be advanced in price before very long. Our aim has been to give every one of our customers an opportunity to get under cover at present prices, and the majority of them have taken advantage of the opportunity presented. Through our traveling salesmen we are receiving the best of reports of the financial condition of our customers throughout the Northwest, and if we can believe reports, the retail dealers have not only been making

money the past twelve months, but are looking forward very confidently to a splendid business for the first six months of the year and the probability that they will need to stock up heavily to take care of their requirements from consumers.

One first-class indication of the status of trade at the present time is the fact that in the closing of our books for the year, they show that our losses from bad debts have been very much smaller than we have experienced for a dozen years, notwithstanding the fact that our sales have been the heaviest in the year just closing that we have enjoyed for twenty-one years. WELLS & NELLEGAR CO.

THE COLUMBUS TRADE.

The weather has been very changeable during the past two weeks—snow, rain, sleet and sunshine. Trade has dropped off in some lines very noticeably, especially in loaded shells. Builders' Hardware is not in as good demand which is always true of that branch of the Hardware business in December. Axes and cross cut saws are in good demand and hard to get. Builders' Hardware has taken another advance of eleven per cent. We do not understand why it is eleven per cent. unless the manufacturer's cost is ten per cent. more and the extra one per cent. is for profit. We have ceased wondering at any advance made by manufacturers these days. They are doing some queer things. We have been "queered" several times, but it will be "queer" if things don't change before 1901. There will be a great many advances the first of the year on small shelf goods such as punches, nail sets and numerous small articles that have not advanced much so far. Some of these goods are still low in price and will bear a reasonable advance.

We are putting in all spare time now shaping stock preparatory to our annual inventory which we believe will make a fair showing for our labors in 1899. We wish all our friends a fat balance sheet, a merry Christmas and a prosperous New Year. THE SMITH BROS. HARDWARE CO.

THE MINNEAPOLIS TRADE.

As long as this good weather continues we will have good business. So far have nothing to complain of, either as to the weather or business. There are some complaints as to prices on staple goods, some dealers apparently not having enough confidence in themselves or the market to stand up to the proper prices based on what the goods are now worth and likely to be worth for many months to come. Many will soon be busy on inventory. We ourselves do not take ours until along in January, beginning the business year February 1st, as we have found this quite an advantage, as it gives us an opportunity to get a great many small accounts cleaned up and out of the way and it is the dull season of the year with us besides. This will be a particularly busy winter with us, however, as in addition to looking after regular trade and taking inventory we have the pleasant prospect of fitting up a new store and moving. We are just beginning to realize that we have a job on our hands. We shall, however, be in much finer quarters and up town where we can be in closer touch with our customers. While this has been an old Hardware establishment for a great many years, the surroundings have changed materially. It is not the center, by any means, as it was 35 years ago.

Regarding future business, we do not believe the higher range of prices is going to shut off business up in this section of the country by any means. While we will acknowledge a bushel of wheat will not buy as much Hardware as it would one or two years ago, the farmers are very prosperous, and we believe as long as they are in this condition they will buy what they want and as cheap as they can, as they did before. As far as we know they were not satisfied with the prices they got for their product or with what they could buy with the money they received for it. All kinds of labor have been well employed here and are now and at good wages. Flour mills have had a good year, while lumbermen have had the best year they have had for a long time, with excellent prospects for the future.

THE KILBOURNE & JACOBS MFG. CO.,

COLUMBUS, OHIO.

Producers of BARROWS, SCRAPERS, ROAD MAKING MACHINERY, STEEL SHAPES, Etc., Etc.

We do not think the Minneapolis people as a whole have anything to complain of. Real estate men would like to see increased values, as we believe they will; in fact conditions to-day are very much brighter in that line than they were eight months ago. There has been considerable building; work that was expected would be stopped on account of winter weather is being rushed along so that many buildings will be enclosed and the interior work will proceed during the winter, giving employment to a great many men who otherwise would be idle.

W. K. MORISON & Co.

THE ST. PAUL TRADE.

The month of November was, with us, an unusually mild one; the record of the weather bureau showing that it averaged 10 degrees warmer than any corresponding month of any previous year since a record has been kept. This meant a considerable curtailment in the sale of such goods as are considered seasonable for this month, notably among which are skates, hand-sleds, snow-shovels, stove-boards, stove-pipe, elbows, heating stoves, etc. As a consequence more or less of these goods will be carried over by many dealers, although within the last three days there has been a marked change in the weather, and we are now enjoying weather that, while not severe, may be considered somewhat seasonable for this latitude. Notwithstanding the drawback of mild weather in November, the result of the business for the month was quite satisfactory, and the prospect is that December will prove equally so.

The year is now so near its end that we are all looking forward to its "round-up," which, with us, culminates in our annual inventory. This is a job that is never hankered after, particularly by those who have the work to do, but when it is over, if the balance is large enough on the right side, we enjoy looking at the figures showing the result.

There is little to be said about what may be considered the "general situation." We apprehend that the condition here is about the same as it is all over the country, and any remarks on it would be considered trite. We will only add that we see no reason why the present condition may not hold during the year of 1900.

C. W. HACKETT HARDWARE CO.

THE SAN FRANCISCO TRADE.

Jobbers are busy stock-taking and retailers are keeping open nights to accommodate the rush of holiday trade, and

the spirit of superabundant contentment and better times coming to stay is suggested by the onlooker.

Christmastide evidences are now in sight all around the town. Shop windows in all lines of trade are tastily and elaborately dressed with goods of holiday suggestiveness, and, according to expert window-dressing artists connected with the jobbing trade, none excel in attractiveness the Market Street retail house windows of Philpot & Armstrong, Osborn Hardware & Tool Co., H E Skinner Co., Palace Hardware Co., and the Alexander-Yost Co.

Wakefield Baker, of Baker & Hamilton, and President of the Pacific Coast Jobbers' and Manufacturers' Association, returned from his Eastern trip the past week. In speaking of the interesting St. Louis session of the Interstate Commerce Commissioners President Baker said: "St. Louis and other Eastern cities want railroad freight rates from the East to this coast based on mileage. They also want carload rates and less than carload rates equalized. The Pacific coast jobbing centers are fighting for the control of the territory out here, which properly belongs to them. Ocean competition determined what rates the overland roads can make. It is the same factor which determines the carload and less than carload rates. The factor of sea competition which we enjoy, is something the Eastern merchants cannot get rid of. Our association has been allowed to intervene as parties defendant with the railroads. The latter have not as much at stake as the merchants on this coast. The St. Louis and other Eastern merchants have introduced practically all of their testimony. In my opinion they have not made out a strong case. The commissioners are to come here early next year to take testimony. It is a very important suit and in all probability will go to the United States Supreme Court before a final decision is reached."

A representative of Stevenson Bros. Co., proprietors of "The Busy Corner," a long-established department store, exclusive of Hardware, at Escondido, San Diego County, was a recent visitor here on a buying trip. This is what he said: "We have just launched into the Hardware business, determined to make it in harmony with the other departments of the Busy Corner, a rousing success. At present we are busy fitting up, receiving and marking off the different lines that belong to a first-class Hardware stock."

L. H. Kohn has returned from his annual outing in the big mountain county of Shasta, finding the windows of his prosperous eight-year-old corner Hardware store, Polk and Sacramento Streets, handsomely trimmed for holiday season.

Shipments from this port the past week included 16 packages of Hardware and 8 cases oil stoves to Manila; 15 packages Hardware, 67 packages machinery, 8 packages firearms and 7 crates bicycles for Japan; 31 packages Hardware, 249 packages machinery and 28 cases arms and ammunition for British Columbia; 455 packages machinery, 2 cases rifles and 2,078 pounds of lead for Mexico; 16 crates bicycles for China; 33 coils cordage for Tahiti; 36 packages machinery for Peru, and for Central America 50 kegs of powder and 43 packages of machinery.

TRADES PRESS ASSOCIATION.

THE GRAPHITE TRADE.

November went out with another record breaker, and now December is well advanced, and from being the off month of the year, bids fair to be in line with the larger months.

The increased cost of everything in the way of supplies—wood, lead, varnish, coloring pigments, rubber and other things necessary to produce pencils—has compelled us to issue supplementary lists of advance in prices, particularly in the cheaper varieties and carpenters' pencils, the latest advance being dated December 6th.

Lubricating graphite was advanced in November, and all invoices for all goods are sent out "subject to change of prices without notice."

We have recently made several shipments on orders from Manila and Cuba, and last month were privileged to ship an order for lubricating graphite to the Dutch government arsenal at Java.

The following article written by Vice-President Walker for our December *Graphite* may be interesting to your readers:

DIXON HOT FOR EXPANSION.

Whether we were for expansion or not before, we don't know, as the darkey said: "Bin too bizzzy to tend to politics." But now the die is cast and we are thick and thin expansionists. Why? Well, last Saturday's mail brought Dixon five different orders from Manila for Dixon's graphite pencils, graphite crucibles and Dixon's graphite lubricants. Now we are glad Dewey went there, glad he sank

the Spanish galleons, glad somebody gave him a house, sorry he bothered what some old women thought about his disposition of it, and glad of anything that will promote trade with the East. The "open door" will swing easier if the hinges are lubricated with Dixon's graphite.

JOSEPH DIXON CRUCIBLE CO.

THE TRADE "ON THE ROAD."

It is very gratifying for a traveling salesman, after a severe illness, to again visit his trade and have them express a sincere feeling of gladness for his recovery.

I have just returned from such a trip, and must say it has been one of the pleasantest trips of my life. My representing a new concern seemed to have been quite a surprise to the trade, for after a connection with one house for six years, the trade seem to expect that a traveller has become a fixture for life. Pensions are something that traveling representatives very rarely, if ever, secure; and this has become an age when a change does a man good, it enables him to get out of old ruts, renews his enthusiasm and increases his hustling abilities.

I have tried in previous years to take care of my trade in every way and to do my part to increase friendship; and it is my desire to impress upon the minds of the buyers whom I expect to call on the interest of Tower & Lyon, that I shall do my best to work in their interest as well as the interest of my firm.

During my trip through New York State I found all Hardware dealers buying very light for immediate delivery, as they all contemplate an early inventory—some are going to commence December 26, 1899. Stocks are fairly good and in better shape as to salable goods than ever before. During the continuance of low prices, the trade have been able to work off goods that were out of date, and to-day they have but few of such goods on hand. Syracuse Hardware & Iron Co., of Syracuse, N. Y., report an exceedingly prosperous year. How could they help but be prosperous when they have such a congenial helmsman at the buying end of the ship as Charles Reussow! They have been at work on their inventory for two weeks and expect to finish by January 1st. All their travelers are lending their assistance in the store, and, wearing white duck suits, they remind a visitor of a squad of Col. Waring's "White Wings."

Almost all the jobbers and large retailers in my territory have been purchasing in large quantities for next Spring at prices previous to the recent advance.

I anticipate leaving New York to visit trade through New England about January 8, 1900. GEO. WATERMAN.

(For further Trade Correspondence see page 34.)

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Branchport, N. Y.—A Hardware store has been opened by Pearce & Huntley, of Penn Yan, to be in charge of E. C. Brown.

Cass Lake, Minn.—Johnston & Toole.

Clarno, Wis.—Ulrich Schar has gone into the Hardware business.

Dana, Ill.—Kelly & Roth have opened their Hardware store.

Groesbeck, Texas.—Oliver-Nussbaum-Scharff Co.; purchase and sale of Hardware and furniture. Capital, \$10,000. Incorporators: D. A. Oliver, S. Nussbaum, L. Scharff, all of Groesbeck.

Highland, Kan.—Allen & Hull is the name of a new Hardware firm.

Iuka, Miss.—Hammerly Hardware Co. Capital, \$3000.

Longview, Ill.—C. A. Peabody has gone into the Hardware and implement business.

Ogden, Utah.—The Ogden Cash store & Implement Co. has been incorporated with a capital stock of \$10,000, and with the following officers and directors: A. A. Steed, president; John D. Fife, vice-president; E. T. Woolley, manager; E. C. Rich, secretary and treasurer; and these, with T. W. Munnford, E. I. Rich and A. R. C. Smith, form the board of directors.

Sault Ste. Marie, Mich.—P. M. Church is arranging to enter the Hardware business.

Williamson, W. Va.—A. H. Beall Hardware Co.; Hardware business. Capital, \$30,000. Incorporators: A. H. Beall, W. M. Bronson, J. K. Roach, J. Strosinder, E. F. Randolph, all of Williamson.

Zanesville, Ohio.—A. Wolf, No. 79 Main Street.

Changes and Improvements.

Brookings, S. D.—The pioneer Hardware firm of Lockwood & Brooke have disposed of their entire Hardware, machinery and carriage business to W. A. Caldwell and J. D. Wilson, who already have taken possession.

Campbell, Minn.—C. C. Pieno succeeds to the Hardware business of Pieno & Cassidy.

Cedar Rapids, Iowa.—E. K. Larimer has enlarged his Hardware store and stock.

Eclipse Cleanable Refrigerator.

"A MERITORIOUS SPECIALTY."

The only removable ice chamber refrigerator in which
the cold dry air is taken to the lowest point in the provision
room, through a removable flue, thus creating a
positive circulation.

The upward current of air through the provision chamber
is so swift that moisture and odors are quickly forced
to the ice, the proper condenser and purifier.

The interior is all metal and all parts accessible for
cleaning. Has an
exceptionally large
ice chamber.

Made in attractive
plain and ornament-
al finishes, neat and
attractive designs
and excellent work-
manship.

The company will mine and manufacture iron, steel and kindred products. The incorporators are Charles A. Porter, Kennedy Crossman, L. S. Filbert, William C. Martin and John P. Peddler.

Changes and Improvements.

Harrisburg, Pa.—The Huber Mfg. Co. have completed negotiations for the purchase of the tract of ground on Market Street, between Ninth and Tenth Streets, and will erect a large warehouse for agricultural machinery and a machine shop for repairs.

Huntsville, Ala.—The Nixon Hardware Co., Bridgeport, Ala., E. W. Nixon, president, contemplate the establishment of a Hardware factory in Huntsville.

Little Falls, N. Y.—The Cheney Hammer Co. has given notice that it has reduced its capital stock from \$20,000 to \$10,000.

New Haven, Conn.—An important real estate transaction was recorded in the town clerk's office by which the Seamless Rubber Co. will be enabled to further enlarge its plant to meet the requirements of its expanding business. The property transferred is from George H. Scranton, of the Scranton & Co., manufacturers of Hardware specialties, to Mabel C. Alden, of Lawrence, N. J., wife of the controlling owner in the company which manages the Seamless Rubber plant. The property has 222 8-10 feet frontage on Congress Avenue, at the corner of Daggett Street, and is covered by a substantial brick factory building.

Omaha, Neb.—Work has been commenced on the excavations for the new warehouse at the corner of Main Street and Seventh Avenue, to be occupied by the Wardner, Bushnell & Glessner Co. As soon as possible the laying of the foundation will be begun.

Owatonna, Minn.—The Owatonna Mfg. Co. has changed its personnel in the withdrawal of D. J. Ames, who is succeeded by W. A. Dynes. The company manufactures the well-known Disbrow churns.

Reading, Pa.—Orr, Painter & Co., Reading Stove Works, have now an established manufacturing center for their Western trade. On and after Jan. 1 they will assume complete control of the Craig-Reynolds Foundry Co., of Dayton, Ohio. The plant covers five acres of ground and consists of a number of large brick buildings. It is thoroughly equipped with all the modern machinery for foundry purposes. About 300 men are employed.

Richmond, Va.—The Watt Plow Co., No. 1452 E. Franklin St., contemplate the erection of a foundry and shop.

Tiffin, Ohio.—The Tiffin Agricultural Works has been sold by receiver for \$50,000. The plant has been in a receiver's hands for nearly seven years. The purchasers are S. F. Shelly, of Defiance; S. P. Shelly, of Toledo, and W. K. Shelly, of Chicago.

SAMPLES
 BY MAIL.

IN our patent loop joint hinge, one part of the loop is made rigid to one-half of the hinge, making the strongest, neatest and best hinge for the purposes mentioned.

Our patent fastening plate and catch which go with the hasp are so perfect in their construction that the catch never gets loose from the plate, as is often the case with others on the market.

When desired, we furnish our hasp and catch with a small hole through each, so that a wire can be inserted and then sealed by use of a lead seal.

IF YOU WANT TO KNOW ASK US

How to file Catalogues, quotations and every class of data, with no more trouble to file than to throw in the waste basket, and as easy to get when wanted as though in your vest pocket.

FOLDING PAPER BOX CO., South Bend, Ind.

"A PROFITABLE MEDIUM TO ADVERTISERS."

Gilbert & Bennett Mfg. Co., Chicago and New York. [Hire Goods]: You have reason to be proud of HARDWARE's success both as a journal of interest and of usefulness to your readers, and as a profitable medium to the numerous advertisers. From the fact that our card has been steadily published in its columns from the first number, it must be concluded that we have found you a satisfactory medium.

"WANT TO DIGEST THEM AT HOME."

Simmons Hardware Co., St. Louis, Mo. [General Hardware]: Enclosed please find \$2.00, being subscription for two copies of your paper for one year, one of which you will please mail to E. C. Simmons, No. 2727 Olive Street, St. Louis, Mo. The other to A. W. Douglas, No. 2845 Lucas Avenue, St. Louis, Mo. They are for use at the store but we want to digest them at home before we bring them here.

No. 49 Queen Victoria St., London, E. C.
FOR SALE BY ALL DEALERS.

ONE BRACKET is practically as good as another. Then why make a specialty of the **BRADLEY**? It costs less to make it than others, and your profit is just so much larger.

YOUR CUSTOMERS will be pleased, for the bracket is light, tasty, beautifully japanned and **WONDERFULLY STRONG.**

Can You Afford-

to carry in stock unknown brands of stove polish that your customers know nothing about, brands they do not call for, the quality of which is inferior, gives them dissatisfaction, and the consequent sale of which brings discredit to your store? Your best judgment answers NO! Then sell **ENAMELINE**, the Modern Stove Polish. Paste, Cake or Liquid. If you are doing business for a profit it will pay you to handle our whole line.

CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chatillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

has our name as makers plainly on the dial, thus:

and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.

A GOOD INVESTMENT.

The Burr Mfg. Co., Cleveland, Ohio. [Safety Lifts, Hoisting Apparatus, etc.] We appreciate the merits of HARDWARE more and more every day. Our advertisement in the same has proved an exceedingly good investment.

HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. *Size of page, 4 x 7 inches.*

FOUR EDITIONS:

A, 200 pages, - - \$1.00 A 2, 400 pages, - - \$1.50
A F, 200 pages with flap, 1.25 A F 2, 400 pages with flap, 1.75

Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. *Page, 4 x 7 inches.*

FOUR EDITIONS:

B, 200 pages, - - \$1.00 B 2, 400 pages, - - \$1.50
B F, 200 pages with flap, 1.25 B F 2, 400 pages with flap, 1.75

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. *Page, 4 1/4 x 7 3/4 inches.*

FOUR EDITIONS:

C, 200 pages, - - \$1.00
C F, 200 pages with flap, - 1.25
C 2, 400 pages, - - 1.50
C F 2, 400 pages with flap, - 1.75

Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. *Page, 5 1/4 x 8 inches.*

FOUR EDITIONS:

D, 200 pages, - - \$2.00
D F, 200 pages with flap, - 2.50
D 2, 400 pages, - - 3.00
D F 2, 400 pages with flap, 3.50

Price Book D.

(4)

MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, turn to **AU** For Chisels, turn to **CH** For Iron, turn to **IRO**
" Parers, Apple " **PA** " Cutlery, " **CUT** " Irons, " **IR'S**

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

1900

HOWEVER scholars and scientists may differ as to whether the year 1900 is the last year of

1900

the old or the beginning of the new century, we think that business men may be assured that it will break all former records in a business way. A few things will doubtless decline in price, but the vast majority of substantial articles which make business cannot decline at present, and the dealers who hesitate at the beginning of the new year are likely to get left without stock. You know we make cutlery in great variety, and are ready for business. We were, however, completely overwhelmed with orders in 1899. It will take a much larger trade to do it in 1900. But do not procrastinate.

1900

ADVERTISERS.

Gilbert & Bennett Mfg. Co., Chicago and New York.
[Wire Goods]: You have reason to be proud of HARDWARE'S success both as a journal of interest and of usefulness to your readers, and as a profitable medium to the numerous advertisers. From the fact that our card has been steadily published in its columns from the first number, it must be concluded that we have found you a satisfactory medium.

We Hold This Refrigerator Up--

As the perfected product of twenty years' experience in manufacturing. We know the Leonard Cleanable will stand every test to prove its superiority. Thousands of satisfied customers will tell you of its merits. You run no risk in buying it, because it is made right. It is made with eight walls to make insulation perfect, and the constant circulation keeps the air pure and cold. Don't be deceived by inferior kinds that may look well—on the outside.

The **Leonard Cleanable Refrigerator**

Has many special features—talking points—which capture the sales. We are very liberal with electrotypes, circulars, etc. Write to us for catalogues and prices. Secure the agency.

HARDWARE

In prosperity prepare for a change. In adversity hope for one.

John W. Hughes, who for many years has represented W. & S. Butcher, Sheffield, England, in this market, has moved the headquarters of this old firm to No. 298 Broadway, where he occupies a portion of the premises controlled by Max Klaas.

Baker & Hamilton, San Francisco, whose Eastern office has for so long a time been in charge of Chas. D. Graham, have removed to the Home Life Insurance Co.'s building, No. 256 Broadway. Since 1865 their New York office has been at No. 88 Wall Street.

Prosperity has this property, it puffs up narrow souls, makes them imagine themselves high and mighty and look down upon the world with contempt; but a truly noble and resolved spirit appears greatest in distress, and then becomes more bright and conspicuous.—*Plutarch*.

The entire stock of goods belonging to R. A. Penick & Son, South Boston, Va., having been destroyed by fire on December 14th last, the firm desire that catalogues and quotations covering a full line of Hardware will be forwarded to them as they intend starting up again as soon as possible.

Charles P. Adams, the former manager of the Monarch Cycle Co., at the Boston branch, has succeeded Mr. Paull as manager of the Eastern headquarters, No. 20 Warren Street, New York, Mr. Paull having been promoted to take charge of the foreign business, at the headquarters of the A. B. Co.

An Italian philosopher expresses in his motto, that time was his estate; an estate indeed which will produce nothing without cultivation, but will always abundantly repay the labors of industry and generally satisfy the most extensive desires if no part of it be suffered to lie waste by negligence to be overrun with noxious plants or laid out for show rather than for use.

Henry C. Kelley, the old-established twine and cordage dealer, at No. 548 Pearl Street, New York, has admitted to a firm connection his old associates in business, T. A. Pierce and Francis E. Hill, so well and pleasurably known to the customers of the house. We wish the new firm, Henry C. Kelley & Co., a successful future, in which every business venture will show a profit.

John H. Graham & Co., No. 113 Chambers Street, New York, have been appointed selling agents for the New Process Twist Drill Co. Drills manufactured by this company are noted as being ground accurately to micrometer caliper gauge; they are highly finished and of superior quality, and they state that all drills not found as represented will be replaced without further charge.

Mr. George T. Brown, who has for the past three years represented the Rochester Stamping Works, Rochester, N. Y., manufacturers of high grade sheet metal goods, has opened a sample room in the Hardware store of Neal & Brinker, No. 18 Warren Street, New York, where he has displayed a full line of samples of the "Rochester Silver-

Nickeled Ware" and other goods made by their well-known works. Mr. Brown is no stranger to the buyers of housefurnishing goods, as he has been selling goods in this market for years past.

Since December 12, 1899 all that part of the export and import business which Markt & Co., Ltd., have heretofore done with the West Indies, Mexico, South and Central America has been transferred to Markt & Struller Co., No. 193 and 194 West Street, New York, and Ricardo Struller, of the late firm of Struller, Meyer & Julia, will take the entire management of the new business thus organized.

Those of our readers who contemplate considering the advisability of adding sewing machines during 1900 to their Hardware stock, will find an interesting article on page 27, written by an expert, who has made this department of the business an exceedingly profitable one. The perusal of this article should have a tendency to strengthen a desire to add this line to other profitable side lines of the business.

G. H. Burnett, of St. John, Newfoundland, one of the oldest contributors to the columns of *Hardware*, after having been connected with the Hardware business of S. Hayward Co., in that city, for twenty years, is about to engage in the same line of trade at No. 45 Germain Street, in the store now occupied by J. J. Seely. Mr. Burnett's long and active experience will stand him in good stead in his new undertaking.

Frederick B. Earle, who was connected with Richardson Bros., Newark, N. J., and their successors, The National Saw Co., for above a quarter of a century, has associated himself with C. E. Jennings & Co., No. 101 Reade Street, New York, and will be prepared to attend to the favors of his host of friends in the Hardware business, for an indefinite period. Thoroughly conversant with every phase of this important industry, we wish him success in his new relation to it.

Clyde E. Brown, with a New London, Conn., Hardware experience covering eight years, has accepted a position with Allerton-Clarke Co., Nos. 97 Chambers and 79 Reade Streets, New York, and will represent their large line of agencies, including Arcade File Works and Lockwood Mfg. Co.'s builders' Hardware, throughout the State of New York. He is an energetic young man, well qualified to make friends of his customers, and create the confidence that inspires good orders.

Henry T. Seymour, for a long time connected with Wiebusch & Hilger, has associated himself with Neal & Brinker, No. 18 Warren Street, New York, intending to devote his attention to the cultivation of the foreign trade, taking charge of their export department; he will also look after the interests of the manufacturers represented by this firm as New York agents. Mr. Seymour's long acquaintance with the details of the department he now assumes eminently qualifies him for the achievement of a success sure to come from intelligent efforts that will be well backed up by the progressive house with which he will henceforth be identified.

HARDWARE

VOL. XX.

JANUARY 10, 1900.

NO. 7.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the **HARDWARE PUBLISHING CO., No. 143 CHAMBERS ST., NEW YORK.**

Subscription, \$1.00 per year.

Subscription, Foreign, \$1.50 per year.

L. E. MITCHELL,	-	-	President.
E. N. ROOT,	-	-	Treasurer.
W. C. BRUNDAGE,	-	-	Business Manager.
HENRY HOPKINS,	-	-	Editor.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

Editorial Trade Review.

Inventories have doubtless all been completed and rough footings, if nothing else, have surely shown the encouraging fact that last year was one for which a Hardware dealer could thank his lucky stars he was alive and full of business vigor. Of course the hope is prominent with every one that the pleasant state of affairs which produced the grand result, will meet with no uncomfortable set back during 1900, although industrial sunshine covering so much and so long a period of time, it has not previously been safe to bet on.

Big stocks are ordered for future business and will doubtless arrive more nearly on time than was possible to accomplish a year ago. So the travelers are getting their samples in shape, their catalogues priced up with the latest discount sheets—and a possible small variation rather than lose the order—and in a few short weeks the volume of trade will be noted as rushing through the usual channels with less obstruction to a steady continuance than one could have hoped for a few months ago.

We notice some of our contemporaries at any time during the past six months, have been apprehending a big drop in some of the high prices prevailing, but month after month passed by without the sickening thud of a demoralizing quotation of any moment and goods have been ordered at advanced figures to be sold at a profit while the demand still keeps up.

The American Steel & Wire Co., after a couple of months' rest, have again braced up the nail market by an advance of \$5 a ton on their products, which amply covers the concession of 1 per cent. for cash in ten days which the sentiment of the delegates in the last National Hardware Convention fairly forced them to agree to, and which they now allow. As all the jobbers will mark up their stocks at once upon the advance, less objection is heard than one would hear if it were a decline to the same extent.

The manufacturers, many of whom spent a good portion of last year in filling orders taken when expanding quotations on raw material were not considered seriously, are now wondering whether they can hang together in sustaining prices, which on their face show a more liberal margin of profit than they have previously been accustomed to. The jobbing trade are willing to support them all they can consistently, as long as the manufacturers will market their products to the retail dealers through the jobber's assistance. And as long as the jobbers will order full stocks for the season's

trade, as they were accustomed to do in days of yore, the wholesalers can have the small trade as their privileged territory in which to complete the distribution.

It will not be as easy this year as it was last to enter up orders at any old price on advancing conditions, praying at the same time that all the goods may not be delivered at once. It is needless to remark, they weren't in 1891, much to the satisfaction of those who may have some of them yet. Lines of goods which through conservative methods have been advanced little or none, will gradually find their trade level and the retailer may possibly be induced to throw out the fear that his competitor is still selling based on the old cost of several years' standing, and be willing to base his cost on current quotations.

Will Present Prosperity Continue?

At last we start on the final year of the century, and under auspices so favorable the prospect would seem to be we are to have a continuance of the encouraging conditions which made the year just ended so memorable in the annals of our industrial history.

The principal hope that inspires the dealer in casting the horoscope of the future business is that the conditions of the present shall be sufficiently permanent in their scope and trend that no ever-present fear of a possible slump shall prove the cloud, no bigger than a man's hand, which shall yet produce the shadows of the future.

Should any indication be given of industrial weakness materially affecting the prices of our various commodities, from the experience of several years only recently placed in the background, would come the well-grounded fear that the end had come and profit sharing had reached its limit and its downfall was imminent.

The constantly-growing accessions to our industrial strength given by new plants, increasing facilities, aggressive consolidations of interests, with designs on an increased product, all have their effect upon the wary merchant who for the first time in years can take a free full breath and pause to wonder if it's safe to prophesy its continuance.

The big profits which so many believe underly the manufacturing projects of the present, have brought into existence but few new and extensive plants that were not under contemplation and construction before the industrial impetus of last year was created, or more than imagined.

The vast manufacturing enterprises already in existence are of a character not to inspire competition of an aggressive vitality from the outside, which can so easily be made unprofitable by a turn of the screw in the opposite direction. These immense consolidations of harmonious interests would certainly break the fall of any adverse conditions which stoppage of the present demands at home and abroad might eventually precipitate; if they were a disorganized crowd of smaller plants, once on the backward stretch from the present top-notch conditions, panic possibilities would surely become prevalent.

The year just ended has been prolific of profit largely in the enhanced value given to full stocks of goods on hand in warehouses of everyone doing an extensive business. The enhanced value was not in every case a realizable asset in the prosperous conditions

surrounding business, but still sufficiently so to provide a surplus profit not earned by hard work, and which cannot be among the promises of the present year, and to that extent must be discounted.

We shall undoubtedly find a safe and profitable business one of the features of the year before us; the amicable relations existing among all the dealers, wholesale as well as retail, being one of the encouraging conditions that will forbid unprofitable cutting of prices, and perfect harmony will surround the marketing of stocks that in well-ordered array will uniformly be found ready for a proper distribution. This very harmonious and unselfish association for business progression will materially assist in the accomplishment of an industrial year of profitable importance.

The safety-valve for our manufacturers will be found in the continuance of our export trade under conditions of increasing importance; and we should not be surprised should any reduced quotations be found necessary to market a largely growing product, that the foreign trade now held by us, at an extremely close margin of profit, will prove to be the first to feel and thus stave off any slump in domestic markets so long as this greater outlet is given us as a balance of power to prevent what might otherwise be considered as an organic weakness, susceptible only to more local conditions.

New Members of the Hardware Club.

At the meeting, on December 15th, of the board of governors of the Hardware Club, of New York, the following gentlemen were unanimously elected to membership in the Club:

Andrew Z. Boyd, No. 37 Warren Street.
Thos. J. Leary, No. 89 Chambers Street.
Robt. D. Kent, No. 13 Maiden Lane.
John C. Rodgers, No. 340 East 125th Street.

Minnesota Retail Hardware Association.

The fourth annual convention of the Minnesota Retail Hardware Association will be held in Duluth on February 14, 15 and 16, at which time a meeting will also be held of the Northwestern Retail Hardware Association, comprising the States of Minnesota, Wisconsin and North Dakota. A souvenir programme of an elaborate character will be sent out to 2500 Hardware dealers in the States of Wisconsin, Minnesota and North Dakota, whether members of the Association or not, the object being to secure the largest possible attendance to further the interests of the Association. The president of the Association, James E. O'Brien, has addressed an interesting circular to the trade within the territory covered by the workings of the Association, dwelling upon the necessity for organized effort on the part of the trade for the accomplishment of their special objects.

Efforts will be made to secure the attendance of representative manufacturers at this convention and spaces will be reserved in the Convention hall for any exhibit which they may desire to make.

Thomas McCracken, No. 323 Boston Block, Minneapolis, is secretary of the Association, and will take pleasure in responding to any inquiries having reference to the coming meeting.

NATIONAL CYCLE MFG. CO., Bay City, Mich. Pamphlet catalogue of 32 pages of National bicycles for 1900. The catalogue is illustrated throughout, showing their various styles of wheels, and illustrating the number of improvements for which this wheel is noted.

Death of S. T. P. Martin.

S. T. P. Martin, of the Dana Hardware Co., Boston, died at his home in Brighton, Mass., December 30th, of pneumonia. He had been in poor health for several years, and had not sufficient vitality to combat the disease. Mr. Martin was born in Brighton in 1848. His father was extensively engaged in the butchering business as then carried on in that city. After leaving school Mr. Martin was employed at the Watertown Arsenal for a short period, but entered the employ of Eaton, Lovett & Wellington in 1863, continuing with their successors until his demise. At the incorporation of the Dana Hardware Co. he was elected a director, and held that office until his death. He was a member of Bethesda Lodge F. & A. M., and a past grand master; he also belonged to the Boston Art Club, and was a member of the Unitarian Church of Brighton. In 1879 he married Miss Belle De Vries, who died about eight years ago, leaving one son who survives him.

At a meeting of the New England Iron and Hardware Association resolutions of respect were unanimously adopted, and a copy sent his family.

He was a man of unusual ability, and his large circle of acquaintances will mourn his untimely death.

Death of Herbert L. Webb.

Herbert L. Webb, the senior member of the firm of H. W. Webb & Sons, Baltimore, Md., died at his residence in that city, on Tuesday, December 26th, in his forty-third year. The cause of his death was Bright's disease. On Thursday, November 23d, he left his store for the last time, to take a train for Philadelphia for the purpose of visiting the Export Exposition, and upon returning home on the following Saturday evening he was thoroughly prostrated, and decided he would take a week's rest, but the disease developed so rapidly that he gradually grew worse until the end came. He was a man of modest and retiring nature, of exemplary habits, and a true and loyal friend; always punctual and attentive to the business which he had embraced upon leaving school. His loss will be keenly felt by his many friends. His wife and five children survive him.

An Important Decision.

As the Van Wagoner & Williams Hardware Co., Cleveland, Ohio, regard the following decision in their favor as a vindication of their course in the legal controversy with the Billings & Spencer Co., we publish with pleasure the following extract from an opinion rendered by Judge Taft in the United States Circuit Court for the Northern District of Ohio, Eastern division.

"The parallelism of the fiber with the longitudinal axes of the arms is something which has been dwelt upon at great length in the expert evidence for the complainant, but the result of the experiments of the expert, when subjected to cross-examination, shows that the increase in conductivity of the commutator, due to this parallelism, is practically unworthy of note. * * * After reading the voluminous record carefully, I am clearly of opinion that the use of the drop-forging for the commutator bars does not produce an article which, in view of the prior art, entitles its first discoverer and user to a patent and monopoly."

As there has been considerable notice taken in electrical and Hardware trade centers, in regard to the patent rights involved in the above controversy, the opinion of the learned jurist will be read with interest.

The man who keeps up with the times, who thinks, reads, studies, adapts and uses good judgment, is the man who succeeds. The man who proceeds along the same line to-day as he did five years ago is a back number, and will surely be distanced by his hustling, wide-awake competitor.—*Side Talks.*

The Optimistic "Man in the Corner."

What will be the complexion of the business of the year to come? Our philosopher says that he is a very wise man who can at this time make any intelligent forecast of next year's events. American history presents no precedents for gauging the immediate future, and there is little upon which to base a prediction. We are told that the general increase in manufacturing capacity is beginning to have its effect, and that while the phenomenal demand continues, the former universal shortage is somewhat relieved, and the feverish activity is abating. It is also certain that the new contracts for ore and its carriage with the increase in cost of labor and the large demand will keep iron up, and prevent the prices of manufactured goods from receding even if there was any good reason for so doing—which does not appear now.

From my corner, I can see no reason why we should not continue indefinitely on the same basis upon which we are now working, with a brief hysterical hiatus next Summer and Autumn, when the quadrennial madness of the Presidential campaign seizes us, and we drop business to save the country. We think now that we won't; that we will be sensible and let cool reason rule our actions; but it is dollars to doughnuts that when the time comes we will adorn ourselves with gewgaws and, in company with the rest of the world, prance about and shout as usual. It is natural enough that we should do so, and we shall rather enjoy it, but it will not help trade. J. B. COMSTOCK.

1812—Happy New Year—1900.

Bruce & Cook, tin plates and metals, Nos. 186-190 Water and Nos. 248-250 Pearl Streets, New York, issue this year the calendar for the eighty-eighth year of their successful business. It is in the same style as usual, a style that is one of its most characteristic features. The following announcement accompanies it, and included in other pages are tables showing weights, sizes, number of sheets in a box, etc., of coke finish tin plates, pickled, cold rolled and annealed taggers' iron, Allaway's and Melyn grade charcoal plates, etc.

Gentlemen: We take pleasure in handing you herewith our calendar for the year 1900, which will be its twenty-sixth annual visit to our friends. We trust that you may find it useful, and that you will be able to give us at least a share of your orders for the goods which we handle, a list of which will be found on its face.

The year 1899, through which we have just passed, has been one of the most remarkable ever experienced, especially in iron, steel, metals and their allied industries. To most people having to do with this class of material, we believe it has been one of unusual prosperity, and we sincerely trust that the same may be continued with you during the year just opening. That prices are high at this time on all such materials cannot be denied, but the enormous demands made upon the country for home consumption, and the increased amounts required for export to other countries, would seem to indicate that, for at least many months to come, somewhere near prevailing prices will rule.

We are carrying a well-assorted line of goods, as you will see by a partial list of stock on hand ready for immediate shipment, as shown on the following pages. This, of course, will be changed from day to day, but when you are needing anything in our line, whether it is shown on the stock list or not, we shall be glad to hear from you, as our facilities for filling orders, we think, cannot be excelled by any house in the country for prompt shipment, in addition to which we can at all times make figures for supplies for future delivery upon receipt of specific inquiries.

With our best wishes for continued prosperity, and trusting to hear from you when in need of anything which we can furnish, Yours respectfully,

BRUCE & COOK,
No. 190 Water Street, New York.

When irritated, the sea cucumber, a species of *holothuria*, can eject all its teeth, its stomach and digestive apparatus, and reduce itself to a simple membranous sac.—*Ex.*

The Hardware Association of the City of New York.

The Hardware Association of the City of New York, with the enclosure of a copy of their constitution and a membership blank, are distributing the following circular to the members of the Hardware jobbing industry, commission houses, manufacturers and all analogous branches. This organized effort on the part of the wholesale dealers and manufacturers should commend its purpose to those eligible to membership, as no better opportunity to protect their interests will ever be given than by a strong organization of this character working in intelligent harmony with each other.

TO THE MEMBERS OF THE HARDWARE AND ALLIED TRADES:

There has recently been formed The Hardware Association of the City of New York by the Hardware jobbers engaged in business in this city, the objects of which are the advancement of all commercial and financial interests of the Hardware and allied trades. Provision has been made in its constitution for membership of Hardware jobbers, Hardware manufacturers, Hardware commission merchants and wholesale jobbers of allied goods. The many encouraging and enthusiastic remarks made by members of our trade, and the hearty commendation by the trade journals, have justified the formation of the Association, for it is realized that at no former time in the history of trades of all kinds has there been felt so strong a demand for organization for self interests as there is at present. Confidence in the integrity of merchants has been stimulated by personal contact, and the welfare of one has been found to be the welfare of all. For these reasons we appeal to you for early membership, believing the movement soon will become a potent force for the betterment of business in our credit, buying and selling departments, and that the Association will become a recognized power among commercial bodies.

We enclose a copy of our constitution and a membership blank.

Respectfully,

Sargent & Co., Russell & Erwin Mfg. Co., Sickels & Nutting Co., Smith, Lyon & Field, C. A. Baynon Co., Robert J. Masbach, White, Van Glahn & Co., Underhill, Clinch & Co., constituent members.

The following are the names of the present officers and executive committee:

President, Alfred D. Clinch, Underhill, Clinch & Co.
Treasurer, Edward C. Van Glahn, White, Van Glahn & Co.

Secretary, Benjamin A. Hawley, Russell & Erwin Mfg. Co.

Executive Committee: Thomas J. Atkins, Sargent & Co.; Robert Sickels, Sickels & Nutting Co.; and the officers.

Bommer's Spring Hinges.

At the National Export Exposition at Philadelphia, Pa., Bommer's Spring Hinges were awarded the highest medal and diploma.

Their exhibit of polished steel hinges created much interest, particularly the bronze plated, antique copper and sand blast finishes, on account of the reasonable prices taken in connection with the beauty of finish and perfect workmanship.

Bommer Bros. also exhibited a number of fine samples of fully polished steel hinges. The interior steel construction, which takes all the wear and friction in their solid bronze hinges, was much admired and appreciated as it makes their real bronze goods as durable as those made entirely from steel.

The method of making sheet lead for tea packing in Formosa is most interesting. The lead is brought from Australia in pigs and after being melted is poured between two large tiles, the required degree of thickness for the sheet being obtained by pressure by the feet. The sheet is afterwards trimmed to suitable sizes and shapes for soldering.—*Exchange.*

Between Paris and Berlin mail matter is now transmitted in thirty-five minutes by the pneumatic process, which is found most advantageous.—*Exchange.*

HARDWARE TOPICS BY THE WAY.

News is a fake until it is news.

You may knife a man generously at Christmas time.

It beats the Dutch how the Dutch thrash the British!

My New Year's greeting: Punch and hammer away.

It never rains but it pours orders upon unjust investment brokers.

If iron continues to rise, it'll soon compete with gold at 16 to 1.

By craning your neck you can't lift up the lost in the multitude.

When a rat is responsible for a fire, you cannot sewer for damages.

The new year holds out the best building prospects of the century.

Something for nothing is nothing for something in wild-cat parlance.

Raw weather may somewhat advance the interests of raw material.

The steel hoop industry "caught on" to the cotton industry in fine style.

Aguinaldo dug the last ditch, but his instruments had to do the shuffling off.

Delayed in automobiltransmission, will soon be a new post-office trade mark.

The process of case-hardening underwent few changes, even in human nature.

The American people may be humbugged when they do not humbug one another.

The Standard Oil Co. may soon apply for a new charter changed into the Standard Earth Co.

Foundrymen are no longer looking ahead. They are too busy getting out of present difficulties.

The military pioneer corps may be advantageously supplanted by automatic shovel companies.

The crucial test of business stability may be boiled and cooked up in the South African crucible.

To judge by orders for steel rails, prosperity has rail-roaded itself miles ahead of the new year.

It requires a corrugated nature to counteract the corrugated liars of the present business world.

Why not auction off Aguinaldo's household? The American people are tiring of licking war stamps.

The Cleveland district is looking down on Pittsburgh, and Pittsburgh is looking up. Which wins?

Figures lie brazenly in paid-up circulations, providing the publisher cannot afford to figure up the truth.

The merchant who always sells at cost and yet grows wealthy, must either steal his goods or his statements.

The business man's Christmas stocking is filled to overflowing with orders that also have a New Year's lining.

Spanish trade directories may be Spanish villages to the American trade and Yankee hieroglyphics to the Spanish trade.

South African developments certainly beat the British. There are no frosts to loosen the burrs on the African chestnuts.

When you see a big down-scale in paint prices advertised, pay the price, but ask no questions. The scale will work out itself.

They will have discovered a diamond mine in the Lake Superior region. Well, if even black diamonds, for the rise is general.

When the outlook is good, don't forget to look out for those who look for the main chance. "Skinners" are busiest in busy times.

Even adjusters are busy adjusting fire claims. Prosperity is "all-fired" conspicuous these days, though often mysteriously spontaneous.

What does honesty in dealing amount to when the product itself is dishonest? No manufacturer can be honest that sends out dishonest metal.

A millennial farmer of the West has ordered a lot of mechanical grasshoppers to be used as scares. Methinks someone will be hopping mad.

Figuratively speaking, the salesman is always loaded with orders. Even the admonitions of his house do not disfigure him until his usefulness ends in a cipher.

The possession of money was held up as the utopian felicity of the human spirit, by a Western rabbi, recently. This goes without saying from the average Jewish standpoint.

The nut factors at Cleveland are unprecedentedly busy. The Upson Co. has even outgrown its factory room, and will soon skirt the whole available hillside of the site it occupies.

A Southern scrap dealer bought in a lost, strayed or stolen heraldry shield and adopted it for his own use. He now claims this is *prima facie* evidence of lineage and legacy titles.

An Oklahoma announcement: Fire broke out in a sawdusted spittoon, but a customer present extinguished the flame with one squirt. Business continues without interruption.

The casting of aluminum is now said to be a found art. A New Yorker claims the redivivus, but there have been similar rumors ever since a man of Cleveland suggested the possibility.

If you find a buckle in galvanized iron, buckle it onto the jobber. Thus you might save the jobber from embarrassment, for the manufacturer is not always the "nigger in the woodpile."

The current year winds up with hopes well materialized, and a good credit balance. Excluding the possibility of a foreign crisis, there need be no fears of a slump in the last round of the century.

The tricycle auto, i. e. a three-wheeled velocipede adapted to both auto and pedal power, to *auxiliarize* one

another, would be a great desideratum until auto-power could be relied upon.

As long as speculators will find the market respond to their investments, they don't begrudge the fellowman's right to existence. Baked, they'll disappear in the nebula, leaving the uncertainty.

All modern establishments are run "on time." It's the basis of all systems. Without specified opening and closing hours the employe might eventually fall into the delusion that he was the "boss" himself.

When a mill or factory shuts down for want of fuel, you may be sure the coal man has denied further credit. Of all alleged causes this is the flimsiest of them all, when traffic is regular, and in strikeless times.

It sometimes looks as if American rail factors were assisting Russia in building its expansion railroad into Uncle Sam's domain. The sly Bruin is "bearing straight" for the new pastures of the happy hunting grounds.

It needs a Solomonic jury nowadays to determine whether the accused is less guilty than the judge, and a divine judge to prejudge the jury's sentiments. Before deciding a case, the Diogenes lantern ought to be passed around for a possible purser.

When England wars in South Africa, the "precious" world is supposed to pay the costs. Foxy Briton! Foolish world! Why don't they adopt the ornaments of the mortgaged Filipino belles until the Boers become the diamond purveyors of the world?

A Gentile and Jew traveler came to blows in a Western hotel as to the question which was the more thoroughbred, undiscovered liar. The Jew was knocked topsy-turvy half a dozen times, but even then protested that the cause of his being downed was due to his superior knack at dodging.

The W. Bingham Co., of Cleveland, is a leader in window displays, and also writes good ads. Their holiday efforts have been very effective from the standpoint that the Hardware store offers a choice as well as practical assortment of gifts which outclass bazaar or department store fripperies in every sensible detail.

Cleveland, Ohio.

JOHN B. RINDFLEISCH.

An Immense Plant.

When the Carnegie Co. shall have completed and put in operation their two big furnaces of 700 tons capacity each daily, that company will have in Allegheny County, Pennsylvania, alone, furnaces capable of producing 2,700,000 gross tons of iron in a year. This is about equal to the whole output of pig iron in the United States, twenty years ago, the product being 2,741,000 tons in 1879. If the output of the country shall be 13,500,000 tons in 1899, the Carnegie company will be able to produce, next year, one-fifth or twenty per cent. of that enormous total.

To keep their furnaces supplied with ore the company will maintain a fleet on the great lakes of sixteen steamers and twenty sailing vessels. The company owns all of the great Frick coking and coaling interests in the Connellsville and Clearfield districts. In addition to the great output of its own furnaces the concern buys several hundred thousand tons of foundry and basic steel pig iron, a large fraction of which is purchased of Southern smelters. It is now probably the foremost producer of steel in the world, though the Federal Steel Co., organized last year, is a close second.—*The Tradesman*.

It isn't the circulating medium that makes the industrial and pleasure wheels go round, but the power behind it.

The New York Credit Men's Association.

The resignation of T. H. Bartindale, as president of the New York Credit Men's Association, was made necessary on account of changing the nature of his business. The reasons were respected by the executive committee of the Association, and the resignation accepted, the following resolutions being adopted:

Resolved: That in accepting the resignation of T. H. Bartindale as president of the New York Credit Men's Association, we at the same time desire to express our appreciation of the valuable services which he has rendered, and our regret that the circumstances seem to make it advisable for him to take such action.

The executive committee tenders to Mr. Bartindale its thanks for his fidelity to the interests of the Association, and for his earnest efforts for its success.

RICHARD P. MESSITER,
CHARLES BIGGS,
ED. E. HUBER,

Committee.

The corrected list of officers for 1900 is as follows:

President,	
A. H. Watson,	
of Watson, Porter, Giles & Co.	
Vice-President,	
Charles E. Meek,	
with National Lead Co.	
Treasurer,	
E. E. Huber,	
of Eberhard Faber.

Chas. Biggs,	F. E. Lally,
Actuary of the Hat Trade	with Crane Co.
Credit Association.	R. P. Messiter,
F. R. Boocock,	of Minot, Hooper & Co.
Treas. H. W. Johns Mfg. Co.	R. B. Minis,
F. A. Brainard,	with Merchants'
of Rand Drill Co.	National Bank.
E. E. Huber,	G. Waldo Smith,
of Eberhard Faber	of Smith & Sills.

The Greatest Inventions of the Century.

The list of twenty-four inventions and discoveries of highest rank made during this century is enumerated by the late Prof. Edward Orton in an address before the American Association for the Advancement of Science, and thus stated in an exchange:

1, Railroads; 2, steamships; 3, the telegraph; 4, the telephone; 9, the phonograph; 10, the Roentgen rays; 11, the spectroscope; 12, anaesthetics; 13, antiseptic surgery; 14, conservation of force; 15, molecular theory of gases; 18, the periodic law in chemistry; 20, the glacial epoch; 21, the antiquity of man; 23, cell theory and embryology; 24, germ theory of disease.

Prof. Orton followed Alfred R. Wallace's classification, except in numbers 5, 6, 7 and 8, which Wallace fitted thus: 5, Lucifer matches; 6, gas illumination; 7, electric lighting; 8, photography.

Prof. Orton added Lord Kelvin's "Vortex Theory of Matter" and the "Nebular Theory." The latter, as in the same range with Wallace's No. 19, "The Meteoric Theory." His No. 16 is the "Velocity of Light Directly Measured," and his No. 17 is "The Use of Dust." He called attention to the obvious fact that the personal equation of the author of such a list would appear in the selection.

A sanitary stove is a stove that consumes rags and other offal without making a glue factory of your home.

Presentation to Newton F. Cressman.

At a banquet held for that purpose at the Bourse building, Philadelphia, on Saturday evening, December 23, 1899, Newton F. Cressman, cashier for the Supplee Hardware Co., Philadelphia, was made the recipient of a very fine testimonial in the shape of a superb watch and fob. It was presented by a number of gentlemen, all devoted friends of Mr. Cressman, and among the most influential of the employes of the Supplee Hardware Co. It had long been thought desirable to give some substantial token of their confidence, esteem and affection which they individually and collectively hold for this gentleman, and the opportunity was taken around Christmas time to make the presentation. The souvenir was a very handsome one, and reflects great credit upon the taste of those having the matter in charge. Upon the case was engraved "Presented to Newton F. Cressman as a token of confidence and esteem from his friends Jim Green, Harry Townsend, Bill Charlton, Fult. Hall, John Charlton, Walter Watt, Geo. May and Joe Clark." The inscription is original in one respect, that the familiar names by which "the boys" are known in their every-day association are retained in the inscription. It was a very interesting occasion. The presentation speech was made by Mr. Watt, and he acquitted himself admirably.

1899 A Record Breaker for The Bissell Carpet Sweeper Co.

The history of the Bissell Carpet Sweeper from its inception in 1875 to the present time, in all its phases and changes, would make a very interesting little volume. None but those closely associated in the business at the present time and who have been associated with it since its start, can really appreciate the rapid advances made from an educational standpoint by this really practical article.

In the early days of experimenting on carpet sweepers, M. R. Bissell was the only one who was thoroughly successful in the many experiments, and although other sweepers had ante-dated his, none of them were pronounced practical until the Bissell first appeared on the market.

Mr. Bissell went through the usual trials and tribulations before his enterprise was successfully launched, but after the present Bissell Carpet Sweeper Co. was organized in 1885, the business began to assume large proportions. Mr. Bissell died about ten years ago, and since his death, his wife, Mrs. Bissell, has been at the head of this large corporation, and managed its affairs most successfully.

The Bissell carpet sweeper factory is beyond all doubt the largest factory of its kind in the world. Its products go to every corner of the civilized earth, and the name Bissell is synonymous with that of carpet sweeper the world over.

Within the past ten years so many valuable improvements have been made to the Bissell Sweeper that the present type of sweeper, as compared with that first introduced in 1875, is as a Brewster buggy would be compared with a farm wagon. The latest improvements, consisting of the cyco bearings, anti-raveling collector device and dust-proof axle tubes, are probably the most important of the many patented features that the Bissell Co. possess. Rapid advances have been made in the demand for Bissell Sweepers within the past five or six years, but none is so apparent as the increase in the popular demand during the year just closed.

1899 has been a record breaker for the Bissell Carpet Sweeper Co., and yet, during the season just passed, several times they have been unable to fill orders promptly on account of inability to obtain malleable iron parts. In the early part of December, so great was the accumulation of orders that this company were compelled to take

their men off the road and decline further orders. Such a condition has never before existed in the business.

In the coming year, the Bissell Carpet Sweeper Co. has made ample provision for the increase in their business that they expect to have. Improvements in finish and mechanical construction are promised, which the company say will be in keeping with their past policies.

The company is managed in a very capable manner at the present time by men of experience, who have been associated with it for many years. Its present officers are as follows; Mrs. M. R. Bissell, president; T. W. Williams, second vice-president; M. Shanahan, treasurer; R. E. Shanahan, secretary.

This concern is already operating very successfully branch houses in New York, London and Paris, and is establishing agencies in all foreign lands.

The World's Largest Blast Furnace Companies.

Some of our readers may be interested in comparing the largest blast furnaces in this country and in Europe. The Austrian Alpine Montan Gesellschaft is said to be the largest single owner of blast furnaces in the world. This concern owns thirty-two furnaces, although most of these are of small size and run on charcoal iron. William Baird & Co., of Glasgow, have twenty-nine furnaces, with a total capacity of about 400,000 tons. The Middlesborough concern of Bolckow, Vaughan & Co. owns twenty-four furnaces, with a total of 750,000 tons capacity, and two other British companies, the Dolway Co. and the Barrow Co. own fourteen plants with an annual capacity of about 250,000 tons each. In the Lorraine region the De Winkels own eighteen furnaces, with a combined capacity of about 730,000 tons.

In the United States the leading concerns, with the number of their blast furnaces and their producing capacity in tons, are as follows:

	Furnaces.	Capacity.
Carnegie Steel Co.....	17	2,200,000
Federal Steel Co.....	19	1,900,000
Tennessee Coal & Iron Co.....	20	1,307,000
National Steel Co.....	12	1,205,000
Virginia Iron, Coal & Coke Co.....	12	560,000
Cambria Iron & Steel Co.....	6	480,000
Lackawanna Iron & Steel Co.....	9	440,000
American Steel & Wire Co.....	5	385,000
Maryland Steel Co.....	4	358,000
Republic Iron & Steel Co.....	5	325,000
Empire Iron & Steel Co.....	10	319,000
Pennsylvania Steel Co.....	5	300,000
Sloss Iron & Steel Co.....	4	225,000
Colorado Fuel & Iron Co.....	3	200,000

The combined annual capacity of the Carnegie Steel Co., the Federal Steel Co., the Tennessee Coal, Iron & Railroad Co. and the National Steel Co., the four largest establishments, is 6,712,000 tons, considerably more than half of the total production of pig iron in 1898. The actual production of these four companies for 1899 will probably be one-half of the total production, so that it may be said that four companies control 50 per cent. of the iron made in the United States.—*American Exporter*.

True Kings.

One of the London stationery journals constructed this ingenious play upon words: The most powerful king on earth is wor-king; the meanest king, shir-king; the most popular king, smo-king; and the leanest one, thin-king; and the slyest one, win-king; and the most garrulous one, tal-king; and the thirstiest one, drin-king. And then there is the hac-king, whose trade's a perfect mine; the dark-skinned monarch, blac-king, who cuts the greatest shine; not to speak of ran-king, whose title's out of question; or famous ruler, ban-king, of good finance digestion.—*American Stationer*.

Wholesale Agent—We have just what you want, an article of great merit. It speaks for itself.

Customer—What is it?

Wholesale Agent—Our four-dollar phonograph.—*Rudford (Chicago) Review*.

Logan-Gregg Hardware Co.'s Annual Supper.

The employees of the Logan-Gregg Hardware Co., Pittsburgh, Pa., assembled to enjoy one of the annual suppers for which they have been noted, on Saturday evening, December 30th, meeting in the sample room of their warehouse, the rear portion of which had been fitted up expressly for the occasion. This enjoyable feast is an annual custom of this concern, dating back, it is stated, to their foundation nearly seventy years ago, and was originally started by being given as a forfeit by the member of the firm or the employe who made the poorest estimate as to the amount of stock on hand when the annual inventory was finished during the holiday season. This feature of the affair was discarded when the number of employees had so largely increased that the firm felt it to be desirable to give the banquet themselves. Sixty-five employees in addition to the members of the firm were present. A very enjoyable menu was provided, and in addition to its discussion, considerable time was given to the providing of the ways and means to increase the business during 1900, many suggestions being offered to those present by which the methods for the new year could be improved, most of them coming from the heads of the various departments. A colored quartette present furnished music during the continuance of the evening, and the colored orator of the company, James H. Bissell, made a very interesting address.

Gray & Dudley Hardware Co.'s Banquet.

The banquet given annually by the Gray & Dudley Hardware Co., Nashville, Tenn., was held on December 23d. The many employees of the company gathered at the office on Market Street, and marched to the Tulane Hotel, led by the Gray & Dudley Hardware Co.'s band of twenty-four pieces, playing popular airs on the way. It has for a number of years been the custom for J. M. Gray, the senior director, to extend an invitation to all of the officers and employees of the company to a banquet when closing the business of the year.

At nine o'clock the brilliantly illuminated and well arranged dining room was thrown open. The tables were handsomely arranged, the decorations consisting of palms, azaleas, chrysanthemums and other flowers, and the other appointments being in characteristic harmony. One hundred persons enjoyed the hospitality of the firm, an elaborate menu being one of the features of the occasion, after the disposal of which the president, R. M. Dudley, acting as toastmaster made a few introductory remarks, congratulating the officers and employees of the company upon having finished the most prosperous year in its history, at the same time taking occasion to thank the employees for the noble manner in which they had supported the officers of the company during the past year, giving them credit for the success of the company being entirely due to those assembled. It has always been the policy of the company to promote the men in their employ in preference to choosing men from the outside when vacancies in their force appeared. A list of names of eighteen of the employees who had been promoted during the last twelve months was read in this connection, emphasizing the fact that this policy be continued in the future as it had been previously. A number of speeches were made by the officers of the company, all of which were listened to with considerable attention. J. T. Jenkins, treasurer of the company, spoke on the subject of "Expansion and Conservatism Reconciled"; W. C. Polard responded to the toast, "My Old Friends and My New Ones," and pleased those assembled exceedingly by the clever manner in which he addressed them. There were a number of other toasts responded to, filled with amusing characteristics of those delivering them, among which were the following:

N. F. Cheairs: "The Road—Why I Left My Happy Home for You." F. L. Martin: "The Cutlery Man, In and Out." Thos. Dale: "The Pleasure of Making Duplicate Invoices." Russ Vanderford: "Retail Department." Ernest Hood: "Our Band." J. A. Chilton: "Our New Building." Jake Boyles: "A Still Hunt for a Trial Balance." W. A. Lee: "Our Boys." C. M. Hood: "Religion in the Hardware Business—Does It Exist?" W. H. Buchanan: "How I Love My Territory." Thos. Carcuff: "Amusements on the Road." Jno. M. Pickard read a poem, entitled "Hardware Melodies."

The evening was passed with good feeling manifest upon every hand, everyone present pronouncing it one of the most enjoyable and successful ever given under the auspices of the company.

Farwell, Ozmun, Kirk & Co.'s Banquet.

The third annual dinner given by Farwell, Ozmun, Kirk & Co., St. Paul, Minn., to their employees, was held at the Hotel Ryan in that city on December 21st, nearly two hundred participating in the festivities. The members of the firm and their traveling force were fully represented. After the enjoyable menu was fully disposed of, and the coffee served, an address of welcome was delivered by the president of the corporation, R. A. Kirk, who spoke in a very interesting manner on subjects that they were all glad to listen to. Following the address, there were a number of informal talks by the guests assembled, on selected topics, and as may be imagined, a very amusing and enjoyable evening was passed under such circumstances. It was understood that the guests had the privilege, as the printed programme of the evening put it, to "sing a song or tell a story is 'local option,' but not even loss of voice or cold feet will be considered a valid excuse for the failure to respond to the request of the president" for any addition to the entertainment. A very attractive musical programme was rendered by a Ladies' Orchestra, under the leader, Miss Nellie Hope. In addition to this, there were numerous sentimental and other vocal selections, "the Barb Wire (Four-Point) Quartette" getting in their fine work at this period. Altogether it was a most successful gathering, and as trade banquets are beginning to prove a social function among the leaders in the business, this can be considered as one worthy of special remembrance.

Norton Emery Wheel Co.'s India Oilstones.

We are advised by the Pike Mfg. Co., Pike Station, N. H., and No. 151 Chambers Street, New York, that they have arranged with the Norton Emery Wheel Co., Worcester, Mass., for the exclusive sale of their well-known India Oilstones. It is their intention to carry a complete stock of India Oilstones at each of their factories and at their New York store, enabling them to fill all requirements in the sharpening stone line with the greatest economy in time and freight. They desire it known that they will gladly quote prices at any time on special shapes and sizes and furnish samples for experimental work.

The descriptive price-list of these goods, recently published, will be forwarded upon application.

Never let a man who is heart and soul with your business leave your employ if there is the slightest chance of retaining him, says the *Drygoodsman*. He is the reserve force of your work and is the supporting army for all aggressive movements. There may be hundreds who can be hired for a great deal less money, but it is like dropping coins into the sea. The man who pushes and pulls, who suggests and carries out, offers and fulfils, is not measured entirely by dollars and cents, and you cannot afford to let him go because another is a little cheaper.

The largest car manufacturing plant is in Pittsburgh.

SEWING MACHINES AND THE HARDWARE TRADE.--V

In considering the sale of sewing machines, I desire to especially impress upon the Hardware dealer's mind that a knowledge of the general construction of sewing machines is not essential to the successful sale of them. The construction of some machines is so simple the carefully worded and illustrated instruction book that goes with each machine, enables anyone to use it without special instructions.

The day is past when sewing machines were classed as a luxury. They have now become a recognized necessity in every family, no household being complete without one. When a family begins housekeeping, along with the bed, stove and so forth, comes a sewing machine, and it would be impossible in these days to keep house without it. The sewing must be done either by the housewife or the seamstress, and in either case a sewing machine a necessity.

Formerly sewing machines were sold through agents and canvassers, while today they are sold through Hardware dealers and other merchants almost exclusively. A Hardware dealer can handle sewing machines to better advantage and with more profit than an agent, because, as a rule, he is permanently established, is well and favorably known in his community and has the confidence of his acquaintances and customers, most of whom would prefer to buy a sewing machine from him rather than from a canvasser or stranger, believing they will get a better article and at a more reasonable price, it also appearing more proper that the dealer who supplies their other wants should also furnish them a sewing machine. There is no side line the possibilities of which can be counted with more certainty. The business is stable. It is beyond the influence of fashion or caprice. Change of season requires no change of stock.

We are sometimes asked if everybody has not already got a sewing machine. No indeed! About the same number are and have been made each year for the past twenty years. Sewing machines, like furniture, wear out. New improvements are being made and new families are coming on, so that the demand is just about equal to the supply from one year's end to the other. The present outlook for a good trade in sewing machines was never more encouraging. Compared with other lines, we see many favorable aspects. Wages are good and the masses are spending money freely. The tendency toward lower prices and cheaper goods that has had a run in all lines of trade, has reached its limit in our line, and we know we have struck bottom. The demand is now, more than in the past, for a sewing machine that carries a substantial guarantee and affords a fair profit.

There is no extra expense in the way of rent, fire, lights nor help, so that any profit is net and clear. Increased income reduces general expenses, and there is nothing a Hardware dealer can add to his already established business that will net a better profit, with as little trouble, as a first class sewing machine. The business does not require much room. A small space set off in the front end of the store, away from the screw counter and away from the nail bin, is all that is needed, keeping in view the fact that a good display is always a good investment as an advertisement, especially with an article that may be considered a side line. You can take charge of the sewing machine department yourself, or, as a great many merchants do, place it in charge of one of the employees, allowing a small commission on each sale as an incentive to take an interest in it.

The Hardware dealer should handle but one make of machine, unless it seems necessary to have both high and low-priced goods, in which case he should have but one of each. However, I am of the opinion that he will do better with one fairly good machine than with the best half dozen. But it must be a good machine. No dealer can do well with poor machines anywhere. He should study the needs of his territory and confine himself to supplying the principal demand rather than to try to catch the stray customer, who wants something much out of the common run.

The extravagant price charged for certain sewing machines has nothing to do with their quality or the cost of making them. Unnecessary and often extravagant expenditures are added to the price without improving the quality in the slightest degree. Besides this, many people are willing to pay an extra price as a premium for the sake of a fashionable name; but there are fewer of these people than formerly. At the present time the great majority of thoughtful people who purchase a sewing machine care more for its actual merits than for its name. They are perfectly willing to pay for quality, but for quality only.

Finally, serve all customers alike; have but one time price and one cash price to all. Don't sell too cheap. Keep prices up on your machines. Then keep your guarantees good and conduct your business so that you deserve the respect of the community, and the confidence and good will of your customers, and you will find the sewing machine business satisfactory and profitable.

Rockford, Ill.

G. H. DIRHOLD.

Where the United States Stands.

From the standpoint of wealth, the United States ranks first among the nations of the world. Great Britain has 75 per cent., France 60 per cent., and Germany 50 per cent. of the wealth of the United States.

In the value of the annual products of its manufacturing industries, the United States also ranks first, the value of those of Great Britain being 44 per cent., Germany 35 per cent., and France 30 per cent. of that of the United States.

In commerce, although the wealthiest and also the largest manufacturing nation, the United States ranks third.

The commerce of the world in 1897, including both imports and exports, amounted in value to about \$18,500,000,000; Great Britain had 18.3 per cent., Germany 10.8 per cent., and the United States 9.7 per cent. of the amount.

A great change has taken place in the course of the trade of the United States since the Centennial Exhibition, held in Philadelphia in 1876.

From 1789 to 1876 the imports exceeded the exports by \$1,084,000,000. Since then the course of trade has been reversed and the exports have been \$4,047,000,000 more than the imports.

As the manufactures of the United States have increased enormously, the manufacturers have been compelled to seek outlets for their surplus products. As a result the exports of manufactures have increased 237 per cent. since 1876, while the exports of all other goods have only increased 75 per cent.

The largest power engine in the world is in the Calumet and Hecla mine.—*Ex.*

Salem Nail Co.

There are few concerns in New York City who have continued for so long a time without interruption, comparatively speaking, as the Salem Nail Co., No. 279 Pearl Street. This is an old and widely known concern. It has been in existence close upon half a century under its present name, and has had a very prosperous career. The flourishing enterprise with which the name is identified was established in 1850 by Admiral Nelson, Abram Nelson being associated later as partner. Both of these gentlemen have joined the "great majority," the last named having died in 1887, at which time the present proprietor, John A. Wilbur, assumed control, and has since carried on the business under the same name with success. The Salem

Yours truly,
John A. Wilbur

Nail Co. are manufacturers of galvanized, tinned and copper nails, tacks and spikes, and their productive facilities are in every way sufficient for all their requirements. Their factory is located at Salem, Mass. It is a well-equipped plant, in which a large force of workmen are employed. They manufacture, in addition to the complete line of common wire and cut nails, which is their largest product, a greater variety of nails, tacks and spikes than any other house in the United States. They claim to be the pioneers in galvanizing and tinning nails, and consequently have the great advantage of a long experience in the manufacture of the same, which has made their goods at home and abroad achieve a reputation for perfect work and durability. One feature connected with their business is of special note, as indicating the extent of their long connection with the Hardware trade in the United States. They have never found it necessary to employ any traveling representatives, selling direct to dealers through the medium of a new idea, original with this company, being the work of Mr. Wilbur himself, who considers it quite a triumph in its way. It is "a quotation card and directory

of nails," and is the only thing of its kind used in the trade within the knowledge of the writer. It is an innovation from the usual methods, and was introduced by the Salem Nail Co. in order to save an important item of expense to their customers. This quotation card is issued to the trade, on which the patrons of the firm indicate the particular kind of goods handled by them. This is returned by the dealer with the information desired marked thereon, in reply to which prices are promptly quoted and samples mailed when practicable. They make a great specialty of slating nails with large firm heads, but are prepared to fill orders for anything in the way of galvanized, tinned, copper and yellow metal nails, tacks and spikes at figures that have always been found of a character to command the confidence of a correspondent. John A. Wilbur, who is the proprietor of the company, is a young man of energy and enterprise, and a natural hustling ability is one of his characteristics. He is thoroughly conversant with the wants of the trade, and a recognized authority on nails of every description, having been in this particular branch of the business a number of years, and has during his lifetime filled many positions of prominence that have kept him constantly up to date. He is fond of original methods of reaching his patrons and interesting them. One of his latest communications is illustrated in the following:

Common Steel Nails

are expensive Nails for doing *good work*,

But When Galvanized

they are durable, they will not rust, and they will outlast any woodwork or ironwork. The same proves true of Boat Spikes, Swedes Tacks and Round Iron Rods. The additional cost is nominal and the rapidly increasing demand clearly indicates that thoughtful Architects, Designers and Builders know that in the end there is economy in the use of Galvanized Nails.

Our stock is complete, our facilities for doing good smooth work are the best, and the capacity of our plant has recently been nearly doubled. Let us quote on your requirements.

—We are also in a position to quote low prices on Copper Nails and Tacks.

SALEM NAIL CO.,
 279 Pearl Street, New York.

STANLEY WORKS, New Britain, Conn., and No. 79 Chambers Street, New York, present one of the most artistic calendars, either in design, execution or applicability, in which a finished sketch by W. Granville Smith, shows a young lady, handsomely dressed, hesitating at the door of a church before entering, on account of a tardy arrival. As the church doors are understood to be hung on "Stanley ball-bearing hinges" the sentiment beneath the illustration is very appropriate: "She is late, but the door swings easily and the hinges will not creak." The entire get-up of the calendar and its artistic expression is of a character in consonance with the high-grade goods with which the name of the Stanley Works has ever been identified.

There are other things to use on pipe threads than red lead, but if you have none of them on hand when a job must be done, do not put the red lead on the inside of the fittings. It should be kept out of the inside of the pipe, every time.—*Exchange*.

The largest sewing machine works in the world are in Elizabethport, N. J.

NEW GOODS AND SPECIALTIES.

The "Kit" or Portable Horizontal Pipe Vise.

Among the various kinds and styles of Vises made and controlled by Tower & Lyon, No. 95 Chambers Street, New York, one of the greatest importance and utility is

the "Kit" or Portable Horizontal Pipe Vise, an illustration of which we give herewith. It possesses the quick adjustment feature in its construction, considered the most effective in modern constructive excellence. While it is possessed of ample strength for any purpose a vise of this description can be applied, it is still extremely portable, weighing only five pounds and but seven inches long; suitable for use in all jobbing or shop work. It has a powerful screw and lever for its weight, is convenient to carry, compact, light and strong; can be added without inconvenience to the other tools in a mechanic's kit, and may be relied upon to take all outside diameters from $\frac{1}{4}$ to 2 inches. The manufacturers have added further to its utility by being able to furnish a full set of special jaws fitted to this vise, so adapted they may be used on all sizes of finished brass and nickel-plated smooth pipe.

C. and F. Drill Holder.

Chandler & Farquhar, No. 36 Federal Street, Boston, Mass., among the many serviceable tools which they are

placing before the Hardware trade, are manufacturing the drill holder which we illustrate herewith. It represents an attachment for converting a breast or hand drill into a bench drill. It can be readily clamped to the table, and

will hold the Millers Falls No. 2 Drill stock, or any similar appliance of corresponding size. It has been meeting with a ready sale in the trade, there being a want already existing for something of this character. It is recommended as being a desirable thing for the Hardware dealer to carry in stock in connection with the tools which this drill holder is claimed to increase the efficiency of. The manufacturers will gladly supply any further information regarding the same.

The Waiter's Corkscrew.

The Williamson W. N. Co., Newark, N. J., in their advertisement in our present issue, illustrate an entirely new

FIG. 1.

corkscrew (see Fig. 1), which they are placing upon the market at the present time, the various operations of which we illustrate in the cuts given herewith. It is marketed under the name of the Waiter's Corkscrew, because almost all the desirable features that a waiter would wish a corkscrew to possess are embodied in this novel tool. Not only will it draw a cork (see Fig. 2), which is the usual necessary function of a corkscrew, but the little metallic appliance connected with the screw enables the waiter to move a metallic crown that may be on the bottle (see Fig. 3), or lift the seal (see Fig. 4), which some bottles are ornamented with. In addition to the above, it will break the wire, as in Fig. 5, on bottles of wine like champagne, etc., which they are compelled to wear on account of the force which is necessarily confined. To say that this one corkscrew will do all these things successfully is to say that it is a very desirable article, and should sell readily. It is manufactured from the best quality of steel, possesses a warranted temper, and every corkscrew is tested at factory against flaws. The handle is highly polished maple, with all the

FIG. 2.

FIG. 3.

FIG. 4.

FIG. 5.

metallic parts nickel-plated, and it is just the right size to fit in a waiter's pocket. The dealer who once places it in stock and calls attention to its combined utility, will undoubtedly add it to his assortment for an indefinite period.

Handy Step Ladder.

The Handy Step Ladder Works, No. 302 Seneca Street, Cleveland, Ohio, are placing before the Hardware trade the Handy Step Ladder, which we illustrate herewith (Fig. 1). It possesses new and unique features which the manufac-

turers claim are original with this step ladder. It can be extended to double its length (See Fig. 2). The malleable castings keep the wood from splitting. There is no strain upon the screws, and the platform shelf works automatically. The upper tread has iron pins going through to pre-

FIG. 1.

FIG. 2.

vent breaking, and flanges in its construction keep the ladder from getting out of joint. These various features would make it seem as though the ladder possessed double capacity for utility, and would naturally recommend it to dealers handling goods of this character. A most important part of these light step ladders is the manifest security which proper construction enables them to give. Care has evidently been taken in the construction of this ladder to make this a prominent feature. They are meeting with a ready and extended sale, the manufacturers state, and they have a daily capacity at their works that enables them to fill orders promptly.

Self-Sharpening H-Studs

Leonhardt & Co., of Schoeneberg-Berlin, Germany, whose advertisement of the above named articles has been in the columns of *Hardware* for a long time, have solved the difficult problem presented for solution for years: In what consists the shoeing of horses in such a manner that they have a good foothold on slippery roads; not only on roads made dangerous by frost, but also on the modern asphalt and wood pavements which are so rapidly spreading in all large cities. It is generally acknowledged that a properly constructed stud is the best thing to always give a firm grip on slippery roads. At the same time many studs have been before the public in past times that after a few hours' wear have been considered of doubtful utility. The usual pointed or chisel-shaped stud soon gets blunt, becomes round and ceases to give any assistance to the horse. In the construction of the stud, an illustration of which we give herewith, the patentee started on the principle that a sharp point is neither necessary or desirable; that what

is really wanted is a sharp edge like that of a skate, which prevents the skater slipping laterally, and it is upon this principle that he has constructed his studs with the H-shaped cross section. As is indicated by their formation, these studs have six inside sharp edges, and the peculiarity of their manufacture is that these edges remain sharp to the very last, effectually preventing the horse from slipping as long as they project from the shoe, no matter how small they may have worn, and even when their general surface has become convex. This is accomplished by the retention throughout of their H-shaped cross-cut, and the inside edges, especially those of the metal, remain so sharp that they may always be relied upon to give a firm hold,

because through the weight of the horse the steel stud is easily pressed into the ice, snow, asphalt, wood, etc., and still enables the horse to move with safety on all kinds of roads. There are some special advantages claimed for these studs over others that may be on the market, among which may be mentioned: They have no sharp points by which the horse might injure itself, and therefore no necessity exists to remove them in the stable, and besides can always be used on any road, and are easily replaced or removed by the driver or groom. This is claimed by the manufacturer to be a great advantage, for horse owners generally know the trouble and loss of time which occurs on occasion of a sudden frost, when the horses have to be walked to the farrier's for roughing. This self-sharpening stud is undoubtedly something that it would behoove those handling blacksmiths' supplies to investigate and ascertain the benefit to be derived from their increased distribution.

Nickeloid Refrigerator.

The Grand Rapids Refrigerator Co., Grand Rapids, Mich., well known as manufacturers of the Leonard Cleanable Refrigerator, are placing upon the market something

superior in the way of refrigerator construction, and which we illustrate herewith. Its most important feature consists of the metal used in lining the interior, which is composed of nickeloid. This is a new production from sheet metal, one side of which is pure nickel and the other zinc. The use of this peculiarly constructed metal enables the manufacturer to give a beautiful nickel finish to the inside of the refrigerator, which is just as fine and attractive as the finish of nickel-plated tea and coffee pots. As the metal is absolutely impervious to the action of grease or acids, it may be relied upon not to rust or corrode in the slightest degree, and it is consequently claimed to be better than a tiled lining, for while being as easily cleaned, it presents no joints by which anything of a deleterious character can accumulate. The metal is warranted not to peel off, the nickel being combined with the zinc in a manner to guarantee this immunity. Neither will it scrape off, and it will not discolor by use. In the construction of this refrigerator the shelves are made adjustable to any height, and these are also formed from the same metal. They are enabled to slide out easily so that if necessary any article on the back of the shelves can be readily removed without disturbing the things in front. In the outer appearance the cases being made of solid oak having quarter-sawn fronts, and provided with a golden antique finish, present a very attractive appearance. In addition to this they have mineral wool insulation, evidently making an article in the refrigerator line that cannot avoid being appreciated on its merits.

Indiana Retail Hardware Association.

The following circular, having reference to the coming meeting of the association has been issued by W. H. Weed, Vincennes, president of the Indiana Retail Hardware Association. It is addressed to the retail Hardware dealers of Indiana and bordering towns in Illinois and Kentucky.

The second annual meeting of the Indiana Retail Hardware Association will be held in Evansville, Ind., February 7 and 8, 1900, and every retail Hardware dealer in the State and those of bordering States are cordially invited to attend, and those not already members, to join the association and take part in the proceedings.

The St. George Hotel will be made headquarters, the Committee on Arrangements having secured special rates for both members and visitors.

A large amount of business will come before the convention, and the programme has been so arranged as to expedite the same as rapidly as possible, and will be of such a nature that the members will not want to miss a single session, will ratify what has been done the previous year, and formulate plans for future developments. You must have realized the benefits that have accrued to other branches of business by organization. These are but an index of what can be accomplished if we will join in our efforts to put our business upon a better basis.

Do not let it be said that you have retarded the work, but give the association your presence and hearty support.

Special railroad rates have been applied for and will undoubtedly be granted. Further announcement containing a complete programme will be made.

All who contemplate attending should write at once to the secretary, W. W. Robb, New Harmony, Ind., as it will greatly assist in forming an estimate of the probable attendance and in arranging the minor details for the convention.

Increasing Exports to Our New Colonies.

Commerce with Cuba, Puerto Rico, and the Hawaiian, Philippine and Samoan Islands during the eleven months ending with November fully justifies the belief that the new relations which those islands sustain to the United States will result in a great increase in our commerce with them and especially in an increase of our exports to them. The total exports from the United States to the four islands or groups of islands will amount in the calendar year 1899 to considerably more than \$40,000,000, the total for eleven months ending with November being \$37,854,110, as compared with less than \$20,000,000 last year. When it is considered that neither Cuba nor Puerto Rico has yet returned to anything like normal conditions and that there has been a condition of actual warfare in the Philippines during the year, the fact that the total exports to the islands in the year exceed those of the palmiest days of reciprocity shows that when normal conditions return our exports to the islands will greatly increase over those of earlier years. Our total exports to Cuba, Puerto Rico, Hawaii, and the Philippine Islands in the years of their greatest prosperity under reciprocity relations of 1893 and 1894 amounted to but about thirty-three million dollars, while, as already indicated, those of 1899 will be considerably in excess of forty million dollars, the total for the month of November having been over four million dollars. This increase is found in the case of each of the islands, the exports to Cuba being in eleven months of 1899, \$22,742,141, against \$8,741,729 in the corresponding months of 1898; to Puerto Rico, \$3,365,292, against \$1,220,014 in 1898; to the Hawaiian Islands, \$10,296,157, against \$5,891,755 in the corresponding months of 1898; to the Philippine Islands, \$1,383,765, against \$137,471 in 1898, and to the Samoan Islands, \$66,755, against \$36,829 in the eleven months of 1898.

Foodstuffs, manufactures, and the articles required for agricultural and business development are the chief exports to these islands and show the most rapid gains. Cars and carriages show a very large gain as do also typewriters, sewing machines, builders' Hardware, agricultural implements, books and maps, thus indicating a general revival

of business activity, there is as well an increased demand for foodstuffs and clothing.

Among the exports of principal articles from United States to Cuba, in the eleven months ending with November, we note the following:

Builders' Hardware, 1899, \$371,724; 1898, \$65,568; 1897, \$58,357. Agricultural implements, 1899, \$104,444; 1898, \$5,789; 1897, \$7,726. Cycles, sewing machines and typewriters, 1899, \$161,040; 1898, \$7,863; 1897, \$14,353.

Our Trade with Russia.

American goods, and especially American manufactures, are making rapid gains in popularity in Russia. This fact is shown not only by the increased total of our exports to that country, but by the warnings which the consular representatives of other nations in Russia are sending to their home governments respecting the popularity of American goods and the success of American merchants in their business methods. British consuls in Russia have recently sent to their Government a series of statements upon this subject, copies of which have just been received by the Treasury Bureau of Statistics, and from which the following extracts are taken:

The British consul at Kieff in his report says: "While Germany is talked about as our greatest rival in the markets of the world, there does not seem to be the same attention paid to the rapidly developing competition of America. The strides America is making are startlingly apparent in the foreign trade. The agricultural machinery trade is practically controlled by America, the trade in duplex and other steam pumps is more or less American, the introduction of improved machine tools is due to America, which is now reaping the benefit of practical ideas combined with utility, and now the supply of fixed steam engines to the foreign markets is being energetically pushed."

The British consul at Odessa writes: "Cycles of English make are held in high esteem, but they are distanced by American machines. Our cousins across the Atlantic can supply good cycles 40 per cent. cheaper than those of English make and can therefore easily undersell the latter. The reason of this difference in price is to be found in the fact that the American bicycles have many of those parts cast which in English machines are turned. The German cycles have a good reputation for durability, and consequently, though little cheaper than English machines, have a fair sale."

Speaking of the popularity of American agricultural machinery in Russia, the British consul-general at Odessa says: "In reapers and binders America still enjoys the monopoly of this market. Hand reapers still command a ready sale, though they are gradually being superseded by self-reapers and binders. During the past year trade in agricultural machinery of English make has been fairly brisk and lucrative, in spite of a failure of the crops in several provinces bordering on the Black Sea, and notwithstanding a rise in prices ranging from 7 to 15 per cent. This activity was undoubtedly due to the abrogation of the heavy customs duty on certain agricultural requisites. There has been an increased demand for portable engines and thrashers of English make, and in this class of machines we may hope to hold our own against foreign rivals." The Consul-general also quotes the British consul at Kieff as saying that: "Grass mowers, reapers, and horserakes—all of American make—found a ready sale. Horse thrashing machines and horse gears were in good demand."

The following shows the exports from the United States to Russia in each fiscal year from 1893 to 1899: 1893, \$2,447,414; 1894, \$6,991,330; 1895, \$6,162,793; 1896, \$8,064,652; 1897, \$8,016,218; 1898, \$7,954,097; 1899, \$10,029,783.

Not a single infectious disease is known in Greenland.

The Southern Hardware Jobbers' Association.

James J. Mandlebaum in consequence of the extra work entailed by the recent loss by fire sustained by the Fones Bros. Hardware Co., Little Rock, Ark., has been compelled to resign his position as president of the Southern Hardware Jobbers' Association, feeling that it would be impossible for him to serve out the remainder of his second term as president under the circumstances, and give it the time and attention so essential to carry on the work in the proper manner. The resignation was accepted by the executive committee with great regret, as the universal feeling was that Mr. Mandlebaum had made one of the most active and progressive presidents the Association has had since its formation. Mr. O. B. Barker, of the Barker-Jennings Hardware Co., Lynchburg, Va., who was the first vice-president, succeeds to the office of president for the unexpired term. He has appointed Mr. C. B. Carter secretary-treasurer, with the Association headquarters in Knoxville, Tenn., the same to be under the supervision of Mr. Carter. It will be remembered that Mr. Carter held this same position from January, 1896, to July of the past year, except that formerly his headquarters were always in the same city with the president of the Association. It is intended that all Association business shall be transacted through the Knoxville office, and consequently all communications appertaining thereto should be addressed to Mr. Carter, and such matters as shall need the attention of the president and executive committee will be promptly referred to them for consideration. In this way the work thrown upon the President of the Association will be greatly lessened, and as it is well known he serves without compensation, it will enable him to throw a little more working responsibility upon the secretary-treasurer, who is a salaried officer.

The International Sprinkler Co.

Merchant & Co., Inc., Philadelphia, New York and Chicago, are in a new field of work. The great number of disastrous fires that have been chronicled during the past business year, entailing such great drains and loss to the insurance companies will make doubly welcome any approved device securing reduction of fire rates, and immunity from fires.

Our attention was recently called to the "International" Sprinkler Co., who manufacture and install a complete system of wet or dry automatic pipe sprinklers. Mr. Clarke Merchant, president of the old established house of Merchant & Co., is also president of the International Sprinkler Co. H. W. Merchant; J. A. McKee; Powell Evans; all of Merchant & Co., Inc. are also officers of the new company. Frank McNamee, superintendent has been for eighteen years identified with this line of work and is recognized as one of the safest and most experienced manufacturers of, and contractors for fire equipment in America, and insurance companies are perfectly satisfied to accept risks which have been equipped by him. This system has been extensively employed in the largest and best class of buildings and has the entire approval of the insurance companies.

The company is fully prepared with experience and capital to make a perfect success in this new field. The rate of insurance on buildings may be reduced from ten per cent. to seventy per cent. by the introduction of the "International" system of automatic sprinklers. This saving is worthy of the consideration of all owners of property—reducing not only the insurance rate but saves loss by fire from the outset as it is guaranteed to stop fires from their incipency, and also saves loss of time and business.

The company state they will be much pleased to hear from any one interested in the subject, and will furnish plans and full information about the equipment of mills, factories, stores with the "International" System of Automatic Sprinklers.

Present Conditions and Consuming Power of Our New Possessions.

Cuba, Puerto Rico, the Hawaiian, Philippine and Samoan Islands, their commerce, conditions and producing and consuming power, is the subject of a monograph just issued by the Treasury Bureau of Statistics in response to the renewed demand for information regarding those islands. In this volume, an effort has been made to picture present physical conditions, as well as the presentation of statistics of commerce, and the prospective producing and consuming power of the islands. Their present consuming power is estimated in round terms at \$100,000,000, about equally divided between the products of agriculture and manufactures. The imports into Cuba in 1892, when normal conditions of prosperity prevailed, were \$52,101,682; those of Puerto Rico, in 1896, \$3,656,578; those of the Hawaiian Islands, in 1898, \$11,650,890; of the Philippine Islands, in 1896, \$28,815,075, while those of the Samoan Islands, in 1895, were \$418,840, the chief commercial value of those islands being as a harbor and port of repair, refuge and supplies.

That the producing capacity of certain of these islands, especially Cuba and the Philippines, may be greatly increased by the creation of improved methods of internal communication cannot be doubted. Of the 35,000,000 acres composing the island of Cuba, not more than 2,000,000 have ever been under cultivation. There are 17,000,000 acres of virgin forest and 9,000,000 acres of fertile plains which have only served up to this time as pastures, and as most of this land is extremely fertile, its producing capabilities, when reached by roads and railways, are almost beyond present conjecture.

All of the principal products of these islands are largely imported into the United States, and seem likely to continue indefinitely among our largest items of importation. Of our total importations of the fiscal year 1899, sugar amounted to \$94,964,120; coffee, \$55,275,470; fibers, \$20,300,093; fruits and nuts, \$18,314,206; crude rubber and tropical products, \$31,875,207; raw silk, with which successful experiments have been made in Cuba and the Philippines, \$32,479,627, while numerous other products of the island, including tea, cabinet woods, gums, indigo and spices, amount to so many millions of dollars. The average annual importation of tropical products into the United States exceeds \$250,000,000, and all or nearly all of them may be produced in the islands in question.

Consumption of foreign products in these islands is about equally divided between manufactures and agricultural products of the temperate zone. Of the exports from the United States to Cuba in 1894, which amounted to \$20,125,321, \$9,440,953 were agricultural products, and of the \$18,616,377 exported from the United States to Cuba in 1899, \$9,799,513 were agricultural products, the principal items being live animals, \$2,367,794; breadstuffs, \$2,306,172; provisions, including beef, hog and dairy products, \$3,540,722; while the most important manufactures were cotton cloths, \$447,839; machinery, \$454,031; boots and shoes, \$214,944; saws and tools, \$166,051; cotton goods other than cloths, \$112,580, and nails, \$66,555. To Puerto Rico agricultural products formed \$1,321,480 of the total of \$2,685,848 exported from the United States in 1899, and averaging about the same proportion in earlier years.

Where one writes with black ink on white paper, and thinks it would be more desirable to have the matter appear white on a black background when printed, all that is necessary is to send the black upon white to a photo-engraver and tell him what is wanted. The price will be double the price of a single photo-engraving, because to accomplish the result desired the engraver makes two plates.—*Exchange.*

CALENDARS AND HOLIDAY SOUVENIRS.

SAMSON CORDAGE WORKS, No. 115 Congress Street, Boston. A desk calendar in red frame, showing one month at a time; decorated across the top by a piece of "Samson Spot Cord," and on the back is printed the sizes and description of sash cord made by them.

ROBINSON & FOX, Exporters, New York, Boston and Newfoundland. A fine hanging calendar that can be seen from any part of the office, the calendar part of the outfit being 13x17 inches, with large figures. It is a very welcome addition to the office furnishings.

ALMON H. FOGG & Co., Houlton, Me., who are jobbers and retailers of Hardware, etc., issue a very handy little calendar that will hang anywhere within reach of the desk, showing the changes of the season, and referring throughout to various goods in the Hardware line handled by them.

STANDARD TOOL CO., Cleveland, Ohio, and No. 94 Reade Street, New York. Card calendar, with monthly calendar sheets attached; convenient size and well printed. On back of the card the various sizes of hand, screw and pipe taps made by them are enumerated, with threads to the inch, etc.

E. D. RUSSELL, Pine Bluff, Ark. An artistic card calendar, with monthly sheets attached, the illustration ornamenting which being a beautiful half-tone reproduction of the painting by Lefler, entitled "Love or Jewels," the fair one in the center of picture being embarrassed by the necessary selection.

THE HORNE & DANZ CO., St. Paul, Minn. Card calendar, with monthly sheets attached, but with the upper division of the card—which is of a color to show it off in an attractive manner—is a very pleasing bit of landscape, worthy of framing, named "Autumn in Virginia." The entire outfit appeals to the eye in a gratifying manner.

ASHTON VALVE CO., No. 271 Franklin Street, Boston. A hanging card calendar with calendar sheets attached, the illustration of the upper part of card being a reproduction from a fine steel plate of "The Summer Girl," making a tempting piece of landscape with a Summer girl in the foreground, calculated to make the observer wonder where he's going next Summer.

MILLER, SLOSS & SCOTT, San Francisco, Cal., are distributing to their friends and customers a leather covered want book, pocket size, which includes a calendar for the year, a number of tables of weights of materials, etc, rates of postage, etc., and showing an illustration of their new store, now in course of construction, which upon completion will be occupied solely by them.

PHILADELPHIA LAWN MOWER CO., Philadelphia, Pa. A handsome calender, consisting of 12 cards, ornamented with the half-tone illustrations referred to in a previous notice of their catalogue, in which, in connection with pictures of their mowers, the various institutions around Philadelphia are admirably illustrated, at the same time giving a reference to every mower shown.

KNAPP & SPENCER CO., Sioux City, Iowa. Dealer's want book, provided with loop to hang up alongside of the desk of the buyer, every page of which notifies the recipient of some specialty controlled by this well-known firm, or giving them some instructions as to the advantage of dealing with this house. It is printed on yellow paper of

good quality, and will undoubtedly be kept and used by the dealer who receives it. This is an admirable form of keeping up the acquaintance of the dealer with whom the jobber has already established a connection.

THE YOUNGSTOWN IRON & STEEL ROOFING CO., Youngstown, Ohio. A hanging calendar, with elegant specimen of artistic coloring ornamenting the upper half of it, from an original painting by Harry Roseland, and entitled "The Bride and the Fortune Teller," being reproduced by color photography. Reference is made to the products of the company in the space surrounding the calendar proper.

HARRINGTON & RICHARDSON ARMS CO., Worcester, Mass. A card calendar, with monthly sheets attached, in which the illustration is from a beautiful steel plate, engraved by Lowell, of Boston, showing two Irish setters with hunting characteristics, and making an appropriate ornamentation in connection with the steel vignette of a hunting scene and engraving of firearms forming the rest of the artistic embellishment.

THE STANDARD WELDING CO., Cleveland, Ohio. An annual calendar in sheets covering a week's space, fastened to a leather-covered back to ensure its permanence; differing from most desk calendars, this is designed to lie flat on the desk. Incidental references to their superior products are noted on the bottom of each slip, and taken all in all it forms a very pleasing advertising feature, worthy of endorsement.

THEODORE HOFELLER & Co, Nos 98-102 Terrace, Buffalo, N. Y. Dealer in metals and paper stock, are distributing to their customers a leather bound pocket memorandum book, which, while giving in detail the goods they are purchasing and selling in their several departments, gives a daily memorandum space, and conveys a lot of genuine information as well, including a yearly calendar, postal rates, etc., and miniature maps of all the States.

HENDRICKS BROS., No. 49 Cliff Street, New York, proprietors of the Belleville Copper Rolling Mills, are sending their friends and customers a leather-covered pocket memorandum book, covering every day in the year. Included in its contents are maps of the several States in reduced size; calendar for 1900, valuable tables of information connected with the metals they deal in, and statistics of the population of the principal towns in the United States.

THE MARLIN FIRE ARMS CO., New Haven, Conn. A small and handy desk calendar with monthly installments; ornamented and made especially attractive by a reproduction in colors of a painting, by Prof. Edward H. Osthaus, as a companion piece to the setter design used by the company last season. The painting shows a city chap enjoying a day's shooting with his Marlin Repeating Shotgun, and a pair of beautiful pointers. To the lover of animals Prof. Osthaus' bird dogs are always masterpieces, and in the present case he has added a background that is exceptionally effective, and the entire painting has an atmosphere often seen on a typical Fall day. The coloring has just enough of the violet hue of the impressionistic school to be pleasing. The mechanical work gives evidence of the rapid advances being made in reproduction by color photography. The company state they will be glad to mail one of these calendars to any reader of *Hardware* sending one stamp to pay postage.

RECENT TRADE PUBLICATIONS.

ECLIPSE REFRIGERATOR WORKS, Burlington, Vt. Pamphlet catalogue of 44 pages, illustrating the Eclipse Cleanable dry air refrigerator, which is shown in a very graphic manner, and in large variety, including all the plain and every-day styles required in some sections of the country, added to which are the high grade, finely ornamented styles that find vogue in large cities.

NORTH BROS. MFG. CO., Philadelphia, Pa. Envelope size catalogue of sixteen pages, under the name of the "Yankee" Tool Book No. 2. This is provided with a very pretty cover well calculated to make a man inspect the contents, which include their full line of "Yankee" Ratchet screw drivers, of the several descriptions which have been noted in our columns at various times; their "Yankee" chuck with drill points, automatic drill and reciprocating drill, all of them quite salable specialties, and the dealer who may happen to be unacquainted with them should write for the catalogue.

HARRINGTON & RICHARDSON ARMS CO., Worcester, Mass. Envelope size catalogue of 20 pages, illustrating their line of revolvers, automatic double-action "Police" Revolver, and their "Premier," "Bicycle" Double-Action Revolvers, Bicycle "Hammerless" and the H. & R. Arms Co. Hammerless, with independent cylinder stop. This is also included among their latest productions as an automatic shell-ejecting revolver. The large line of these first-class goods is well known to the trade, and includes a number of productions much lower in price than their highest grade, and most reputable goods. A price list of parts is also given, covering every possible requirement for repairs.

SHENANGO SPECIALTY WORKS, Sharpsville, Pa. Pamphlet catalogue of 52 pages in which are embraced all their patented specialties manufactured from wire, iron and wood, and shown in its pages in a very extensive variety. Included in the assortment are window guards, elevator guards, store baskets for exhibiting fruit, vegetables, etc., a large variety of basket work, covering a great many special lines, both with stand and arranged to hang; revolving fountain flower stands, wire stair tread, store-front guards, floor mats, wire matting, hammocks, etc. The "Peerless" wire hammock which this concern manufactures largely, is shown and explained on several pages. Wire fencing in large variety is also included in the list of their special work.

TROY NICKEL WORKS, Albany, N. Y. Pamphlet catalogue of sixty pages, covering their entire line of stove trimming specialties, which are marketed under the name of Alaska. A very unique feature connected with this catalogue is the cover, which is formed to illustrate a cake of ice, in the center of which is placed an Alaska lid lifter, and makes a very unique appearance, impressing the class of goods on the mind of the receiver. This is their eighteenth annual catalogue and price list of these goods. Included in the contents will be found stove dampers of every description, kitchen sets, parlor sets, fire shovels, pokers and lid lifters in great variety, tack hammers, stove knobs, oven door handles, etc., each and every one of which illustrating the peculiar "Always Cold" feature which has been so largely advertised by this progressive concern.

STANDARD TOOL CO., Cleveland, Ohio. Pamphlet catalogue of 80 pages, printed on excellent paper, and finely illustrated, the contents of which include their Standard tools in large variety, twist drills, reamers, chucks, spring cotters, taps, flat spring and riveted keys, milling cutters and special tools. Their large and extensive variety of twist drills is well known to the trade, including everything made under that name, and a large variety of special tools adapted for various requirements that is customarily found in a catalogue of this kind. Included in the contents are their fluted taper shank drills, straight shank oil-tube drills, Standard jobbers' reamers, with Morse taper shanks, Standard shell reamers, adjustable Universal solid reamers, etc. This is a very valuable and desirable catalogue of its kind, and includes too many special varieties of Standard tools not to be included in the Hardwareman's assortment of catalogues.

HIBBARD, SPENCER, BARTLETT & CO., Chicago, Ill. Buyer's Want Book for 1900, similar to the one previously published by them as an annual greeting to their trade. These books are mailed about the first of January to customers and dealers throughout the territory covered by their travelers. This is the eighth yearly edition of the volume, and is in a much more extensive and desirable style than any previously issued by the company, being on heavier and better paper, well printed and strongly bound in cloth. It consists of 126 pages, half of which can be used by the buyer for his memoranda of wants, the other half being covered by specialties controlled by this well-known firm. A weekly calendar extends throughout the book, each page being devoted to a separate week. The firm states that while it has not been their purpose to make this in any way a catalogue, it enables them to call attention to some of their seasonable specialties, reminding the dealer of them at the proper time. At the same time it notes the fact that this year they have added paints, oils, varnishes' and painters' supplies to their regular line. The concluding pages are devoted to manufacturers' lists and various tables of useful information which will be appreciated by the dealer who receives it.

GREENE, TWEED & CO., No. 17 Murray Street, New York. Large size pamphlet catalogue of 64 pages, in which are fully illustrated the line of Brass specialties controlled by this firm. The assortment includes box, cabinet and flap hinges in great variety, refrigerator and closet seat hinges, window and screen lifts, molding hooks, coat and hat hooks, door and draw pulls, chest handles, cleats, pulleys, cupboard turns and catches, barrel and ship bolts, escutcheons, hasps, brackets, box corners, numbers, chain door-fasteners, etc. These goods are all handsomely illustrated throughout, in almost every case full-size cuts being shown. List prices are given, and they are made so that one uniform discount covers the entire catalogue, which is an advantage appreciated by those who receive a catalogue of this description. The manufacturers state that the special list of brass goods shown in this catalogue cover goods only that are carried in stock, and can be shipped promptly. Having a large assortment of these goods with which to commence the present year, they make this statement for the information of the trade. Then again, these goods are illustrated in the catalogue in correct numerical order, with each class of goods grouped together, which is another feature that will commend itself to the dealer.

REVIEW OF THE MARKETS.

Hardware: Business begins moderately for the new year. The trade anticipates a number of changes will now take place in goods that have been held at conservative quotations during the past year, and while many goods are already secured at favorable rates, less criticism is given to changes of an upward character than was formerly the case.

Wire Nails: The American Steel & Wire Co., after waiting for some time to enable the dealers to reduce their stocks materially, made an advance in price of 25 cents a keg as a new year's gift to the trade. A change in the terms is given making them now 1 per cent. off for cash in 10 days, instead of the previous 30 days net.

Stocks are regarded as light in the hands of jobbers as well as retailers; and business not especially brisk. Manufacturers' quotations are now as follows, f.o.b. Pittsburgh; terms, 30 days, 1 per cent. off in ten days:

To jobbers in carload lots.....	\$3.20
To " " in less than carload lots.....	3.22½
To retailers in carload lots.....	3.35
To " " in less than carload lots.....	3.45

New York quotations may be stated as follows:

To retailers, carload lots on dock.....	\$3.53
less than carloads on dock.....	\$3.66
Small lots from store.....	\$3.50 to 3.75

Cut Nails: A conference between Eastern and Western manufacturers convened for the purpose of steadying market quotations, was held recently and resulted in establishing the following market prices, manufacturers' quotations being announced as follows: f. o. b. Pittsburgh; terms, 30 days, 1 per cent. off in ten days:

To jobbers in carload lots.....	\$2.50
in less than carload lots.....	2.55
To retailers " ".....	2.65

New York prices may be quoted as follows, with business but nominal at the present time:

To jobbers in carloads on dock.....	\$2.68
in less than carloads on dock.....	2.76
To retailers " ".....	2.86
Small lots from store.....	\$2.85 to 2.90

Barb Wire: The advance and terms in the price of Wire Nails, as noted under Wire Nails, also apply to Barb Wire. Home demand is only ordinary in its requirements, but an improvement is expected by the time the large orders are ready to be placed. Quotations are as follows, f.o.b. Pittsburgh, net cash, or 1 per cent. off in ten days:

To jobbers in carload lots, Painted.....	\$3.65
" " Galvanized.....	3.80
" " in less than carload lots, Painted.....	3.67½
" " Galvanized.....	3.82½
To retailers in carload lots, Painted.....	3.80
" " Galvanized.....	3.95
" " in less than carload lots, Painted.....	3.90
" " Galvanized.....	4.05

Smooth Wire: Smooth Wire was included in the advance of 25 cents. Demand is at present only moderate, but will speedily start up. Quotations are as follows, f. o. b. Pittsburgh, terms thirty days, or 1 per cent. off in ten days:

To jobbers in carload lots.....	\$3.05
To " " in less than carload lots.....	3.07½
To retailers in carload lots.....	3.20
To " " in less than carload lots.....	3.30

The charge for galvanizing is 50 cents on sizes from 6 to 14 inclusive; on Nos. 15 and 16, 85 cents, and on Nos. 17 and 18, \$1.10.

Tire Bolts: Dated December 28, 1899, a new revised price list was adopted on these goods by the associated manufacturers and is subject to a discount of 57 per cent.

TIRE BOLTS.—Revised List Adopted December 28, 1899.

Length.	1/4 & 3-16	1/2	5-16	3/4
1	\$0.60	\$0.95	\$1.40	\$2.20

Screws: Under date of January 1, 1900, the Associated Screw Manufacturers made a general revision in the price

list, and on washtubs of 60 cents per dozen list. The advance being less than 10 per cent. does not cover, they claim, the actual increase in cost of materials.

Emery Cloth: Revised prices have also been made in Emery Cloth, both in sheets and in rolls. It will be noticed that the prices in sheets have been advanced, while those in rolls have been reduced. No change in discounts.

EMERY CLOTH.—Per Ream.					
No. FF to 1½	No. 2.	No. 2½.	No. 3.	No. 3½	Crocus Cloth.
\$20.00	\$22.00	\$26.00	\$28.00	\$30.00	\$20.00

list of Iron Wood Screws, making it is said a slight average advance, but leaving the discounts on the list without change. No change was made in the price list on Brass Wood screws. We give the new list herewith.

Chucks: The Skinner Chuck Co., New Britain, Conn., announce that they are compelled on account of increasing cost of material, to advance the price of their chucks, taking effect January 1st.

Lead Pipe, Sheet Lead, Etc.: Under date January 2d, an advance is announced by the manufacturers of Lead Pipe, Sheet Lead, etc., the list prices on which are now quoted as follows, subject to the regular discount of 20 per cent.:

Lead pipe.....	7 cents per pound.
Sheet lead.....	8 "
Tin lined lead pipe	12½ "

Sandpaper: Under date December 23d, the following revised list prices were announced by Baeder, Adamson & Co., and agreed to by other manufacturers of sandpaper, the increasing cost of materials used in its manufacture necessitating the advance. Discounts remain as before. No change has been made in the Garnet or Ruby papers. The new lists on sand and emery paper are as follows, which are subject to a discount of 50 and 10 per cent.

FIRST QUALITY FLINT PAPER.					
Nos. 000 to 1½	No. 2.	No. 2½.	No. 3.	No. 3½.	No. 4.
\$5.00	\$5.50	\$6.00	\$6.50	\$7.00	\$8.00
SECOND QUALITY SANDPAPER.					
All numbers (0 to 3 and assorted) .. \$4.25 per ream.					
EMERY PAPER—Per Ream.					
Nos. 00 to 1½	No. 2.	No. 2½.	No. 3.	No. 3½.	No. 4.
\$7.00	\$8.00	\$10.00	\$12.00	\$14.00	
EMERY PAPER—Per Roll of 50 yards.—24 Inches Wide					
Nos. 00 to 1½	No. 2.	No. 2½.	No. 3.	No. 3½.	No. 4.
\$7.50	\$9.00	\$11.00	\$13.00	\$15.00	

Indurated Fiber Ware: Cordley & Hayes, No. 172 Duane Street, New York, whose special production is Indurated Fiber Ware, announce an advance in their prices, to take effect on January 1st, on Star Pails of 20 cents per dozen

cents, "C" grade 6½ cents. Jute Wool Twine, 4 ply only, per pound, 6½ cents; all other sizes, 7 cents.

Linseed Oil: Dean Linseed Oil Co., quote as follows:

In lots of less than 5 barrels	51 cents per gallon.
In lots of 5 barrels or more	50 cents per gallon.
The five-barrel price only applies to deliveries of that quantity at one time.	
Boiled Linseed Oil, 2 cents per gallon higher than Raw.	
Calcutta Oil, 65 cents per gallon.	

THE BOSTON TRADE.

The year closed with more evidence of commercial soundness and industrial prosperity than has appeared at any time in the experience of the present generation. Reports show that there have been less failures with a much smaller aggregate of liabilities than for many years. Statements made by manufacturers throughout New England indicate a grand opening for the new year and this means in our factory towns a large consumption and higher prices.

The bright weather of December stimulated business to a degree that packing rooms were full at all times and the usual early closing was an impossibility.

As expected there has been a decided change since the opening of the new year. Everybody seems to be taking their annual inventory, closing books of '99 and getting ready for new business. Travelling men send encouraging reports for Spring trade. Stocks are light in the hands of the retailer and every one is looking forward to an increased consumption during 1900.

Some of the advances which have already been made are harshly criticised, but we believe they are fully warranted and from present indications there are many changes to follow. The advance of \$5.00 per ton means many changes in wire products and we firmly believe that present quotations in these lines will be firmly maintained.

The recent snow has proved a boon to the country trade

and orders are coming in from the lumber section for such goods as they are obliged to have. The advance made in axes, saws, chain, etc., early in the season somewhat restricted business in this line, but it now looks as if we should all sell our full complement.

Wishing yourself and all readers of *Hardware* a Happy and Prosperous New Year,
FRYE, PHIPPS & CO.

THE PHILADELPHIA TRADE.

It is rather early to talk about trade—as stock taking has until recently occupied the minds of all jobbers—while the pricing of salesmen and overhauling of samples for the new year take the place of trade temporarily. In a few days, however, salesmen will once more be on the road and business is expected to be in full swing; meanwhile mail orders are coming in at a gratifying rate, apparently, indicating the country is in need of goods and that new enterprises are being freely started.

There has been considerable discussion of late as to whether high prices do not stop building improvements, etc., and, while this may be true to a certain extent, it must be borne in mind that, on the other hand, prosperity and high prices always go hand in hand, despite the teachings of some political economists who try to make us believe that low prices are a benefit to the community. Every business man knows that low prices always mean hard times, and that an era of prosperity is always accompanied by high prices.

When the country is prosperous, men have courage and faith and start new enterprises freely and risks are undertaken and ventures made which would never have been assumed were it not for the encouragement given by prosperous times. Factories and mills that for years past have been dismantled, or out of repair, now feel able to paint, repair and rebuild their works, and the aggregate of such practice throughout the country is very large, and it is a question whether such new enterprises do not more than offset any stoppage that is caused by our so-called high prices.

The first of the year finds jobbers, and the trade generally, interested to know whether the advancing state of the market would be maintained, and the results in this line since January 1st have been such as to please those who were sanguine that higher prices would prevail. It must be borne in mind that many manufacturers had stocks of material bought at old prices—some manufacturers had their wants covered throughout the year 1899. That year, however, has now passed into history and manufacturers who need material for 1900 find themselves confronted by a market demanding almost twice the price of last year.

This has had the effect of nerving many manufacturers who were sceptical as to the policy of higher prices, and

with the result that greater backbone is shown and many of the manufacturers are firmer in prices than ever before.

A number of advances have been announced on prominent lines of goods, such as Stanley Rule & Level Co.'s goods, steel and iron squares, nails and wire, blacksmith bellows and others, and all indications seem to point towards a maintenance of prices for some time to come. Expectations are based upon the prospect of a good trade for the Spring, and this seems to be fairly assured.

BIDDLE HARDWARE CO.

THE BALTIMORE TRADE.

We have just finished taking inventory of stock prior to closing our books, after an exciting and profitable year's business, and in reviewing the work gone over during the past twelve months can hardly realize the wonderful changes which have taken place in Hardware, not only in the prices of goods but in the changed conditions affecting manufacturer and jobber. The causes leading up to present results are many and have been well discussed although there are a few unprinted words spoken in the councils of large stock companies that are not whispered in the ears of the dealers in that respective line.

A larger margin of profit should be allowed the jobber on many goods than he now enjoys or rather has to submit to, there being but one source of supply as a rule, but there must be a change in this respect or else the jobber will likely seek other investment for his capital.

The sudden drop in industrial stocks last month had a very depressing effect upon a number of Baltimore operators as has been evidenced through bankruptcy and suicide occasioned thereby; fortunately however our merchants do little speculating outside of their legitimate lines, so we can report for this section the existence of a generally healthy and prosperous condition of trade.

Collections are being vigorously pushed and remittances are therefore quite satisfactory. H. W. WEBB & SONS.

THE PITTSBURGH TRADE.

The year opens with the brightest prospects we have known for a long time. Everybody employed at good wages, products of the soil, the mines and the mills in great demand at remunerative prices, confidence of the business public firmly established, and a good prospect of financial legislation that will settle the basis of our money value. There is little doubt that some of the great corporations are abusing their present powerful position to extort higher prices than they should. This seems to be short sighted, for the higher they force prices, the quicker will competition build up, and the sooner the inevitable drop. There are very many goods, however, which are still quite low in price, the makers being conservative in their ideas. One of the things that worries the catalogue

LAWN MOWERS

CHADBORN & COLDWELL MFG. CO.,

Write us for Prices and Catalogue for 1900.

NEWBURGH, N. Y.

maker is the frequent changes of list prices. A catalogue cannot go through the press without having several of such changes while in the printer's hands. However, "it's an ill wind that blows nobody good," and the printer is correspondingly happy. Wishing all our readers a very happy new year,

LOGAN-GREGG HARDWARE CO.

THE DAVENPORT TRADE.

The first earth was removed September 15, 1899, in grading the Davenport, Rock Island & North Western Railroad. On January 1st, 1900, the management announced that the work was completed, that the rolling stock had arrived and that the road was fully equipped and ready for business. This gives Davenport another and shorter outlet to Chicago and the East, and also to the wheat fields of the great Northwest. A good freight business was secured the first day and the success of the road is assured from the very beginning. The officers and owners of the road will be banqueted by the business men of Davenport on Saturday night the 6th inst.

The Tri-City Street Railway Co. have completed their line through the Arsenal, from Davenport to Moline, and are carrying the employes of the Arsenal to and from their work.

The Davenport Canning Co. are making preparations to manufacture their own cans in the near future.

After a quiet holiday week, with most of the salesmen home eating turkey and renewing acquaintance with their families, they are again on the road and orders are coming in from them as usual.

The recent advance in nails and barb wire was accepted as a matter of course, and the new prices were immediately adopted by the Hardware jobbers.

The National Lead Co., without any previous intimation, sent their friends and customers a New Year's card announcing another five dollar per ton advance in white lead. This will be accepted as a valuable New Year's gift to those having a large stock on hand.

It seems everything is advancing in price except money, which is cheaper now than we have ever known it in Iowa.

If prosperity abides as faithfully with the Hardware trade in 1900 as in 1899, *Hardware* will have at least one correspondent that will be content.

SICKELS, PRESTON & NUTTING CO.

THE SAN FRANCISCO TRADE.

This good resolution day—the first of the new year—is here with a copious rainfall, a sample of a goodly number California has had within the last thirty days of 1899. And the trade says it is good; that abundant crops are now practically assured; that these timely rains and all else combined have made money easy, and that collections are good; that in so far as the Pacific Coast is concerned, nothing is to be said except that the prospects for 1900 could not well be improved upon, and that the croaker has disappeared from the land.

In cargoes of general merchandise cleared from this port within the past fortnight were included 38 packages Hardware, 24 packages machinery, 13 crates bicycles and 14 packages electrical goods to China; 21 cases picks, 42 cases shovels, 30 packages machinery, 32 crates bicycles and 83 packages electrical goods to Japan; 125 packages machinery, 50 reels barbed wire, 10 cases cartridges, 60 kegs of powder, 70 packages paint and 100 barrels cement to Central America; 104 packages Hardware, 12 packages machinery, 3700 pounds of tin, 200 kegs and 3870 cases powder, 500 cases dynamite, 14 cases cartridges and 10 cases of fuse to Mexico; 63 packages Hardware and 13 cases arms and ammunition to British Columbia; 63 packages machinery, 77 sewing machines, 3469 packages railroad material valued at \$35,228, and 12,882 pieces machinery valued at \$73,112 to Honolulu; 420 packages Hardware, 177 packages machinery, 40 kegs lead, 120 cases powder, 3214 steel rails and 8733 packages railroad material, 13 packages agricultural implements, 29 packages machinery, 104 kegs nails, 519 pieces pipe, 332 coils of wire, 105 packages glass, 70 kegs white lead, 32 coils rope and one automobile, 17 packages machinery and 44 packages bicycles to Australia; 4 packages machinery and 5 tons pig iron for San Blas; 13 cases machinery to Vladivostock; 180 coils rope to Ecuador, and 96 packages machinery to Chili.

TRADES PRESS ASSOCIATION.

FROM ONE OF OUR OLD CORRESPONDENTS, NOW "ON THE ROAD."

Topeka, Kansas, December 28th, 1899.

To my esteemed customers, greeting:

The writer, three years ago, had the very great pleasure of addressing you, at the end of the year, a congratulatory letter.

AT THE TRAPS OR IN THE FIELD

Laflin & Rand Smokeless Powder will give a better pattern with the same velocity than any other powder made. Further than this you can always depend on its being just the same; hot or cold, wet or dry and in any climate. We guarantee this and invite tests. If you shoot a revolver or rifle you will be interested in our latest output, SPORTING RIFLE SMOKELESS. Write for information.

"A Planing Mill within itself,"—says a Country Carpenter.

No. 45. Nickel Plated Stock and Fence, with Twenty Tools, Bits, etc., \$8.00
SOLD BY ALL HARDWARE DEALERS.

Permit me, as the representative of the Gille Hardware & Iron Co., and its allied Evans Mfg. Co., to once more cordially assure you of our hearty appreciation for the continued and liberal favors you have bestowed upon us, not only during the year just ending, but in the weeks, months and years past.

It has always been our unswerving purpose to deal justly, liberally and always profitably enough, that we might afford to continue in business.

It is a well-known fact, and your individual knowledge will confirm the statement, that the Gille Hardware & Iron Co. has been very conservative, very just and liberal and very slow in the advancing of prices during the past ten months. We have not "gouged" because we could; we have not in all cases taken the full advance, when we have perforce been compelled to advance prices. Our policy has been to "divide," to be "fair," to act as if we were concerned in your profits as well as ours, because we have realized it if others have not, that the retailer would be the last man to profit by unusual, unexpected and oftentimes illegitimate advances.

During the year 1900, now just upon us, may we hope, may I hope, that the cordiality of all our former business relations may continue, multiplied by your additional good will incident upon the prosperous year just passed, and upon our assurances that we shall continue a policy which we believe highly appreciated by our numerous friends.

In a personal way, permit me to extend each and all my valued customers and their employees, my own sincere appreciation for the favors so courteously and cheerfully bestowed, and quite as graciously accepted, I trust.

During the year to come it is my purpose to enlarge my usefulness to my employers, by close application to business methods; to also more deservedly gain your confidence and esteem.

Accept from my employers and myself our heartily sincere wishes for a very happy and prosperous new year.

Faithfully yours,

H. C. RUSHMORE.

Representing the Gille Hardware & Iron Co., and Evans Mfg. Co., Kansas City, Mo.

Keep Your Temper.

Be good-tempered. It pays, in every way; it pays, if you are an employer; it pays, if you are an employee; it is profitable, in every walk of life. And this is taking the most selfish view. You owe it to others to be good-tempered; you owe it to your own manhood, to your own self-respect. In making others comfortable, you are making things agreeable for yourself; you are gaining and keeping good-will, which may be of value and help to you hereafter; you are accumulating a capital of popularity and good report, which may be used to advantage, perhaps, at a critical time. Good temper is a great factor in success.—*Business.*

Disastrous Economy.

"What's that!" shouted the husband, who had concluded to economize, as he heard his wife leave an order through the telephone. "Just countermand that. Do you think that I'm so old or broken down that I can't put casters on that bed? What's the matter with the ones on there now?"

"They're the old-fashioned kind and cut the carpet. I have the new ones, and was just calling a carpenter to put them on. That bed is very old, dear, and the wood is as hard as a bone."

"I don't care if it's as hard as flint. I don't ask odds of any carpenter living, in that kind of work. Where's the tools?"

"We have no gimlet."

"Of course not. If I'd buy a Hardware stock we wouldn't have a carpet tack. But I don't need a gimlet. The screwdriver's enough." Five minutes later he had a big blood blister on his first finger, his face was red as a boiled lobster, and he was ordering the servant girl to run up on the avenue to get him a gimlet. She returned with a 5-center. Between his wrath and the hard wood it was bent double before one hole was bored, and there were white blisters on the palm of his hand.

At this stage he stormed at everybody in sight and hustled his wife off for a gimlet. When he finished by gaslight he had lost \$10 in time, the casters were on crooked, his right hand was disabled, he was so mad that the rest of the family went to bed to escape him, and the girl had left. But he still thinks that he is a martyr, and that his wife does not sympathize as she should with his economical policy.—*Detroit Free Press.*

Money in Fire Damaged Goods.

"One of the greatest boons to insurance companies and merchants whose wares have been partially destroyed by fire is the salvage or wrecking company which steps in immediately after a conflagration and begins the work of rescuing damaged stock from the ruins," said the veteran insurance agent. "Such concerns exist only in New York and three or four other large cities, but the demand for their service is growing so that in time every community of importance will have a salvage company of its own, no doubt.

"Sometimes the salvage concern is employed by the insurance companies and sometimes by the firms which have sustained a severe loss by fire; it depends usually on the terms of settlement between the insurance men and the owners of goods. Where the goods, or that portion of them, pass into the possession of the insurance companies by the terms of settlements made with insurers they are handed over to the salvage company, which 'wrecks' them, as the process of restoring to something like pristine condition is termed, and the goods are sold for the account of the insurance companies which had paid the former owner for total loss. The salvage people receive a certain percentage of the amount realized for their compensation.

"Making goods which have passed through a fire salable necessitates quick action and very skilful handling. The operation must be in charge of men who are entirely conversant with the line of articles damaged. Most often, in the instance of a large fire, the stock will be found in the cellar water-soaked and inhumed in heaps of stones, plaster, fallen beams and all manner of incidental rubbish. But no matter in what condition the goods may be the salvage company noses them out, carries them away to warehouses and stores rented for the purpose, and there are endeavors to restore them as far as practicable to something like their original condition, so that they may be readily converted into cash. Quick-drying plants are provided for clothing, dry goods and similar merchandise. When the goods are thoroughly dry they are surrendered to cleaners and renovators. Fresh tags, bands, new labels, boxes or ornamental wrappers, according to the needs of the case, are provided, and very often goods, which at first glance appeared damaged beyond all possible restoration are forwarded to the auction rooms by the salvage company looking as fresh and good as new. When cloths, silks or fancy dress goods have been so spoiled by water and smoke as to render them useless because no long pieces can be saved, they are trimmed and sliced into small pieces for the use of makers of covered buttons, gaiters, slippers, neckwear and caps, and others who consume short pieces of goods.

"Such perishable goods as groceries are easily ruined by fire, smoke and water, yet the salvage concerns cheer-

fully contract to repair such stocks and there are men in their employ who endeavor to save even a grain of rice. The main thing to be considered by the salvage people in handling a stock of fire-damaged groceries is cleansing it of all odor and signs of smoke. That accomplished there is small difficulty in selling the dry stock, repapered and carefully repacked, for almost as much as it would have brought before the fire. Thus where the salvage industry is conducted for the benefit of the insurance companies which have paid insurers for total losses, the insurance men very often receive back a sum of money which considerably lightens the burden of their losses.

"One stock which is quite capable of appalling even the most experienced salvage man is fire-damaged clothing, and the fellow who takes charge of the work of restoring it for a salvage company must know the business from A to izzard. After the garments have been dried they must be gone over and thoroughly inspected by experienced tailors, who diligently strive to obliterate all evidence of damage. In order to destroy such marks garments are frequently changed in size and style. Perhaps an entire stock of coats occupied such a position in a great fire that a sleeve of each was burned away. That, however, would not make the garments a total loss to the salvage company. The coats would be so patched up as to bring a satisfactory price at the forthcoming 'fire sale' which terminates the offices of the salvage company. Sometimes at these 'fire sales' goods which were miles and miles away from the scene of the fire are mingled with the damaged stock for the purpose of striking an average, and to make them look like wrecked garments they are drenched before the sale.

"Perhaps the real terror of the salvage man is a stock of Hardware damaged by fire. Hardware and cutlery are invariably difficult to handle, because rust makes them unsalable. When they are tumbled and tossed from a burned out establishment, highly polished steel, rifles, shotguns, revolvers, pocket knives, razors, plated ware, saws, chisels, planes and axes appear to be utterly useless and only fit to grace the refuse heap. But shortly after they have been carted off by the salvage company to rooms especially engaged for their rehabilitation these articles take on a vastly different aspect. By means of grindstones, polishing machines, burnishing tools and acid baths the metal is made to look fresh and new. Old handles are replaced with new ones made of rubber, horn, ivory, celluloid or other suitable materials, and all of the small articles common to the Hardware and cutlery trade are fastened on fresh cards or packed in new boxes. Stock which is ruined beyond recovery is disposed of to the junk dealers."—*New York Sun*.

Nicknames of European Nations.

Englishmen have accepted the name of John Bull as suited to the national character. A Scotchman is Sandy; the Irishman derives his name of Paddy from his national patron saint; while an ancient nursery rhyme records the fact that Taffy is a Welshman. English sailors call the Frenchman, in contempt, Johnny Crapaud; but in France he is Jacques Bonhomme, or, as a bourgeois, Monsieur Prudhomme. Cousin Michel is the name by which the German is known to the Continental nations. Mynheer Clossh, an abbreviation of Nicholas, sums up the Hollanders, who are often known simply as the Mynheers; while the Switzer rejoices in the name of Colin Tampon. We have all heard of the Russian Bear and the Unspeakable or Infidel Turk; but these are hardly real nicknames. Don Whiskerandos is almost a national nickname for the Spaniards, dating from Elizabethan times. Italians are known as Lazzaroni, and Danes are called Danskers.—*Ex.*

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Albany, Mo.—C.C. Riggins has gone into the stove and Hardware business.

Bellows Falls, Vt.—Howard Hardware Co.; buying and selling iron, steel, Hardware, etc. Capital, \$35,000. Incorporators: L. G. Howard, of Reading, Mass.; O. E. Howard, F. B. Lyon, G. D. Parker, J. C. Dennison, all of Bellows Falls.

Charlotte, N. C.—The articles of incorporation of the Southern Hardware Co. have been filed with Clerk J. A. Russell. The incorporators are: A. C. Hutchison, Thomas W. Dixon, C. A. Dixon and C. E. Hutchison. The capital stock is \$5000 with privilege of increasing to \$25,000.

Columbia City, Ind.—C. M. Beck has gone into the Hardware business.

Leadville, Colo.—The H. H. Tomkins Hardware Co.; \$50,000; H. H. Tomkins, L. H. Tomkins, John Harvey, Arthur Lumsden, William M. Harvey.

Lincoln, Nebr.—A new wholesale Hardware firm will open for business in this city about the first of the year. It will be comprised of Robert M. Joyce of this city, William Morrison, formerly of Omaha, and J. W. Jakway of Kearney. The retail stock of Baldwin Bros. has been purchased by the new firm.

Maysville, Mo.—George Marr has opened up a new line of Hardware.

Menominee, Mich.—The Oliver Hardware Co. has been organized.

Miles, Minn.—Henry Listerud.

Mount Calm, Tex.—The Mount Calm Hardware Co. Capital stock, \$5000.

New Market, Ia.—A. McFarland has gone into the Hardware business.

New Troy, Mich.—S. E. Fletcher is erecting a building for Hardware.

Norfolk, Va.—M. Levy & Co. have opened a wholesale Hardware store.

Port Orford, Ore.—M. H. Cheever has opened a store for Hardware.

Pullman, Wash.—O. Devenish is arranging to go into the Hardware business.

Richmond, Va.—A charter has been granted to the A. B. Clarke & Son Hardware Co., to do a wholesale and retail business. The capital stock authorized is \$50,000. The principal stockholders are Richmond business men.

San Francisco, Cal.—The Phinney Stove & Hardware Co. Directors: A. Phinney, W. F. Williamson and Etta Phinney, San Francisco; and T. F. Smith and A. M. Albright, Oakland. Capital stock, \$20,000, all subscribed.

Stockbridge, Mich.—J. V. Russell has gone into the Hardware business.

Terre Haute, Ind.—The S. L. Fenner Hardware Co. has been incorporated with a capital stock of \$10,000. The directors and stockholders are S. L. Fenner and Oscar G. Derry.

Texarkana, Ark.—The Benjamin Hard-

ware Co. Capital, \$10,000. Incorporators: J. E. Benjamin, W. C. Hardin, R. A. Hardin, all of Texarkana.

Wabasso, Minn.—Charles Evert is erecting a store for Hardware.

Wagoner, Ind. Ter.—O. F. Millard of Alexandria, La., has bought out E. A. Lee, dealer in shelf and builders' Hardware.

Changes and Improvements.

Bellows Falls, Vt.—The Hardware firm of L. G. & C. E. Howard, which has been so well known as a leading firm in town for many years, will be merged into the Howard Hardware Co. Both of the Howards retain an interest in the business, and their three clerks, F. B. Lyon, G. D. Parker, and J. C. Dennison, will become stockholders in the concern.

Cameron, W. Va.—C. E. Lancaster is closing out his stock of groceries and will put in a line of harness and Hardware.

Hartland, Me. A. D. Linn has recently purchased the Hardware store formerly owned by C. H. Smith and has increased the stock and is doing a large business that is all the time increasing.

Hastings, Nebr.—The Hardware stock of Fred. G. Russell, bankrupt, has been sold at public auction. William Kerr was the purchaser, the consideration being \$3250.

Hornellsville, N. Y.—Wallace Roberts, the Hardware dealer of this city, will soon begin the erection of a three-story brick business block on the corner of Canisteo and Taylor Streets. The building will measure 80x24 feet, and the first two stories will be occupied by Mr. Roberts' handsome stock.

Minneapolis, Minn.—The Andrews block at Third and Washington Avenues N is to be enlarged at a cost of \$5000 and will be used for agricultural implement warehouse purposes. Another story will be added to the block.

Oakland, Nebr.—J. P. Cruikshank of Blair has bought the Racket store and will move here the first of the new year.

Phoenix, Ariz.—The stock of the Henry E. Kemp Hardware Co. has been sold to Ed Metcalf, acting for J. L. B. Alexander, who is said to be acting for a company composed of Henry E. Kemp, George H. Olney and others. The price was \$9,000.

Pittsfield, Me.—T. G. Lancey & Co. are preparing to make numerous improvements in their large Hardware store on Main Street. The partition between their store and the store adjoining will be removed thus making their new store twice as large as formerly. The interior will be fitted up in the latest style and when completed will be one of the best finished Hardware stores in the State.

Reading, Pa.—Improvements to the store of Hertzog & Heilman, Sixth and Bingham Streets, are completed, and the addition has been opened for business. The new three-story building, 30x50 feet, is a model in every way and well planned for the purpose intended. Shelving and counters are arranged along the west and

north sides, on the first floors, which are well stocked with a general line of Hardware. There are four bulk windows, one on the Sixth Street side and three on Binghamman. One is 90x130 inches and is said to be the largest Hardware display window in the city. The store room now has a depth of over seventy feet, and each department is conveniently arranged. There are two double entrances. An elevator of the latest construction is placed on the south side.

Ripley, N. Y.—The firm name Bennett & Hamilton, Hardware dealers, has been changed to Bennett & Collins, Mr. Hamilton having sold out his business interests to Charles D. Collins.

Springfield, Mass.—The Hardware and plumbing firm of Leland & Day have dissolved partnership. Mr. Leland will return to Worcester and Mrs. Day and her husband, who has been employed by C. N. Fitts, will continue the business under the firm name of L. F. & F. S. Day.

Springville, N. Y.—W. E. Razey and A. K. Stanbro have purchased Fred. Bowen's Hardware and tinware store and plumbing business, at Ellicottville, and have taken possession.

Trumansburg, N. Y.—D. D. Bower has bought the interest of H. S. Bates in the Hardware store of Bates & Hadley.

Urbana, Ohio.—The firm of N. P. Cone & Sons, dealers in Hardware and implements, has been dissolved by mutual consent, N. P. Cone retiring. The business in the future will be conducted by N. P. Cone's Sons.

Warwick, N. Y.—The Hardware firm of Finch & Colwell, has been succeeded by Colwell & Lawrence. The new firm is composed of E. S. Colwell and James B. Lawrence.

Burglaries in Hardware Stores.

Ceresco, Nebr.—C. S. Mortlock, cutlery, etc. Chattanooga, Tenn.—Chattanooga Hardware Co., \$15.

Fostoria, O.—Stewart Hardware store.

Newport, R. I.—Taylor & Co., revolvers.

Topeka, Kans.—Topeka Bicycle Co., revolvers.

Fires in Hardware Stores.

Darlington, Ind.—Fire in the Hardware and implement store of George Seybold & Co. has damaged the stock to the extent of \$4000 to \$6000.

East Liverpool, Ohio.—Fire has damaged Watson & Sloan's Hardware store to the amount of \$2500. It was fully insured.

Florence, S. C.—Florence Hardware Co.; stock valued at \$3500; insurance \$2000.

South Boston, Va.—R. A. Penick's Hardware store damaged by fire.

Syracuse, N. Y.—Clancy Bros. Hardware dealers, Nos. 207-209 Pearl Street, stock destroyed by fire. Loss, \$7000. Insurance, \$2000.

The Blount Door Check

is described in a monthly bulletin of good things
issued by a prominent hardware firm as follows:

"In the light of much knowing of many such devices, we deliberately here and now state, that the Blount Door Check is the *only perfect one* at present correcting man's tendency to leave the door ajar. 'Tis practically all in one piece, is simple, positive in action, wont get out of order—in short, it is "far and away" the best door doctor extant."

On request we furnish to the Hardware Trade attractive folders descriptive of the device and bearing the name and address of the Dealer. The name of this Company does not appear upon them.

ALL
THE NEWS.

HARDWARE

HARDWARE
EXCLUSIVELY.

The name of the only Hardware Trade Journal
in America with the motto "All the News; Hard-
ware Exclusively."

It is published on the 10th and 25th of each
month, which is as often as any dealer desires to
receive a trade paper which he intends to read.

Has tabulated records of all new firms and com-
panies and their various changes in the manufac-
turing line. All the new stores and business news
among the jobbers and retailers of the country;
with a Bicycle and Sporting Goods Record covering
the changes daily occurring in that important line.

For the benefit of the retail dealer it has a "Prices
Current" in every issue covering 32 columns of its
pages. A careful consideration given to this de-
partment of the paper may save many dollars to its
subscribers.

It offers to the advertisers advantages possessed
by but few of its competitors in its legitimate field.
In addition to foreign circulation, embracing 74
countries besides our own, it reaches within the
limit of the United States every State and Terri-
tory, where trade and traffic have a foothold.

It has just completed its **twentieth** volume and
is consequently in no experimental stage, waiting
to establish a subscription list.

HARDWARE'S rate card is based on actual value.
It is a paper for the Hardwareman, possessing the
respect of the trade, the confidence of its patrons,
the thanks of its subscribers and the courage of its
convictions.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, over the country are requested to contribute to this page News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Etc.

Bethlehem, Pa.—J. S. May & Co., for the manufacture of roofing, slates and all other slate products. Capital, \$25,000. Directors: George H. Bartlett, J. S. Moyer, Alvah N. Brown, Bethlehem.

Brooklyn, N. Y.—The National Saw Filers' Association to manufacture sharpeners and set saws. Capital, \$50,000. Directors: George W. Bardwell, Willis A. Bardwell, Augustus C. Saxton, and Daniel W. Martin, of Brooklyn.

Carthage, Mo.—A company has been organized to manufacture the "Eagle Heater," the patent for which was recently issued to H. Q. Hood, of this city. The company will be regularly incorporated with \$20,000 capital, all paid in. Louis Hatten will be president of the company; H. L. Bright, secretary, and H. Q. Hood, superintendent.

Chattanooga, Tenn.—A company with a capital stock of \$50,000 has been organized in this city for the purpose of manufacturing agricultural implements and appliances. The Southern Implement Works is the name of the new concern.

Chicago, Ill.—Solid Steel Tool Co. Capital stock, \$5000. Incorporators: Henderson H. Miner, Walter D. Laparle and Carl Carlsen.

Collinsville, Conn.—S. D. Strout is to set up an edge tool manufactory in Wheelock's shop building on Maple Avenue.

Duluth, Minn.—The Marshall Wells Hardware Co.; manufacturing Hardware. Capital, \$1,000,000. Incorporators: A. M. Marshall, A. H. Comstock, F. W. Parsons, H. C. Marshall, all of Duluth; E. P. Stone, of Saginaw, Mich.

Kansas City, Mo.—The Olson Mfg. Co.; manufacturing stoves. Capital, \$5000. Incorporators: N. B. Olson, H. W. Loose, J. S. Loose, all of Kansas City.

Kittery, Me.—The W. S. King Co. has been organized at the office of F. E. Rowell, for the purpose of manufacturing and dealing in a patented scissors and hedge trimmer. Capital stock, \$30,000. President, Charles C. Boshier, Worcester, Mass.; treasurer, Fred. A. Jones, Worcester, Mass.; clerk, F. E. Rowell, Kittery, Me.

Minneapolis, Minn.—The Crescent Mfg. Co. has been incorporated with a capital stock of \$25,000 for the purpose of manufacturing stove and leather polishes.

Moline, Ill.—John Deere Plow Co. Capital, \$150,000.; manufacturing agricultural implements, wagons, etc. Incorporators: Willard L. Velie, John W. Good, William Butterworth.

New York, N. Y.—The Electric Boiler Protection Co.; Hardware business. Capital, \$100,000. Incorporators: W. B. Brauer, J. C. Beebe, J. T. Lynch, L. E. Warren, all of New York City.

Plainville, Conn.—The Clark Caster Co.

has been formed to make casters and parts. The capital stock is \$15,000 in shares of \$100 each.

Sharon, Pa.—The Fruit-Oil Co. has been chartered to engage in the wholesale and retail Hardware business and the manufacture and sale of iron, nails and machinery, with a capital stock of \$100,000.

St. Louis, Mo.—Articles of incorporation have been filed by the Bell Mfg. Co. Its capital stock is \$100,000 and it is said will engage in the manufacture of soaps, metal and wood polishes and paints. Among those who are largely interested in it are: Nicholas M. Bell, William J. Stone, Thomas M. Bell and James McCluskey.

Changes and Improvements.

Boston, Mass.—The property of the Atlas Tack Corporation was offered for sale by public auction recently at the Boston Real Estate Exchange. The sale was made under the terms of the mortgage execution between the Atlas people and the State Street Trust Co. The only bid then offered was from K. L. Harrison, of New York, and the property was knocked down to him for \$200,000. It is understood that he was acting in behalf of H. H. Rogers, of the Standard Oil Co., who holds the bonds of the corporation.

Bridgeport, Conn.—The new three-story brick building to be used as a machine shop of the Buliard Machine Tool Co., is about completed. A new circular brick chimney 150 feet in height and 12 feet base, is finished.

Doylestown, Pa.—The Doylestown Agricultural Works, one of the oldest industries in this borough, owned by W. Sharp Hulsizer, has been purchased by Henry D. Ruos, who will combine the manufacture of bicycles with that of agricultural implements.

Elwood, Ind.—The Wright Shovel Works will remove from Anderson to this city and double their capacity of the plant now here, giving employment to more than 300 men. The plant, increased in size, will be ready for operation the first of the year.

Hamilton, O.—The Hamilton Machine Tool Co., have broken ground for the erection of a magnificent warehouse, 60x90 feet, which is another evidence of the remarkable growth this institution is having under the direction of Charles F. Hilker, president and owner. Bender Bros. are pushing it to completion as rapidly as possible, and it will be a substantial brick building.

Indianapolis, Ind.—The Home Stove Co. have taken out a permit to build a warehouse at the corner of Kentucky Avenue and Sharpe Street. The building is to cost \$6000.

Lancaster, Pa.—The Steinman Hardware Co. has been organized to succeed to a Hardware business that was founded there 140 years ago by the Steinman family.

Milwaukee, Wis.—The well-known Hardware firm of W. H. Munn & Co. will be re-organized as a stock company—the W. H.

Munn Hardware & Mfg. Co. It is proposed to largely increase the business, one of the features being the manufacture of ranges, kitchen and laundry appliances for hotels, restaurants and institutions.

Reading, Pa.—The American Slate Co. have secured control of the following quarries in the Lehigh region; American Bangor, of Bangor; Star and Standard, of East Bangor; Chrome, of North Bangor; Gem and Danielsville, of Danielsville, and Aetna, of Pen Argyl. The company is headed by W. J. Turner, of Philadelphia.

Waynesboro, Pa.—The stockholders of the Landis Tool Co. have voted to increase the capital stock from \$75,000 to \$100,000.

Recent Embarrassments.

Newburgh, N. Y.—An involuntary petition has been filed against the Hudson River Paint Co.

New York, N. Y.—Henry and Edward H. Deike, doing business as D. F. Deike & Son, manufacturers of glue and gelatine at Nos. 602 and 604 West Fifty-Second Street, have filed a petition in bankruptcy, with firm liabilities \$50,246 and firm assets \$31,175.

St. Paul, Canada.—G. C. Snyder, doing business under the name of the Remington Cutlery Co., has assigned upon the demand of Palmer, Parker & Co., of Boston. Liabilities amount to about \$5360.

Recent Fires.

Alton, Ill.—The Beal Bros. mining implement factory has been destroyed by fire, together with its contents. The fire was discovered by the watchman and in a short time the fire crept over the oil-soaked floor and the building was a mass of flames. The loss is estimated at \$50,000 and the insurance at \$26,000.

Branford, Conn.—The roof of the brass foundry of the Branford Lock works has been damaged by fire to the extent of about \$150.

Binghamton, N. Y.—The Jones Scale Works has been destroyed by fire. The scale works is the property of Ex-Lieutenant Governor E. P. Jones, and his son. The work of rebuilding will be rushed through as the firm is behind in its orders. The loss is estimated at \$25,000, covered by insurance.

Little Rock, Ark.—The factory of the Little Rock Wheelbarrow Mfg. Co. on North and Victory Streets has been totally destroyed by fire, entailing a loss of about \$4000.

Woburn, Mass.—Fremont S. Bassett's machine shop and foundry have been burned, causing a loss of \$23,000, on which there was an insurance of \$18,000.

Miscellaneous.

Springfield, Mass.—The annual meeting of the Belcher & Taylor Agricultural Tool Co., was held recently. W. P. McFarland was elected president and George S. Taylor treasurer. W. P. McFarland, J. E. Taylor, J. B. West, C. A. Taylor and Andrew Gale were chosen directors.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Agencies, Etc.

Brooklyn, N. Y.—The Tubular Fly Co. of New York; sporting goods. Capital, \$50,000. Incorporators: G. Wykes, R. B. Cantwell, both of Brooklyn; R. Sterling, C. R. Chapin, both of New York City.

Butler, N. J.—The Noble Rubber Co. has been incorporated by Guy H. Noble, John F. McLean, and John D. Chapman; manufacture rubber goods. Capital stock, \$3000.

Camden, N. J.—The Macpherson Automobile Co. has been incorporated by Harvey F. Carr, D. Truman Stackhouse, Schuyler C. Woodhull; manufacture automobiles. Capital stock, \$20,000.

Camden, N. J.—The Western Automobile Co. has been incorporated by H. M. Martin, A. H. Chetzlan, John H. Curtis and David H. Roblin; to manufacture automobiles and electric motor vehicles. Capital stock, \$6,000,000.

Charleston, W. Va.—The Standard Automobile Co., of Chicago, Ill., has been incorporated under the laws of West Virginia, by M. C. Alford, C. H. Vance, J. Huppaker, H. W. White, and J. M. Wier; manufacturing and dealing in automobiles. Capital stock, \$1,000,000.

Charleston, W. Va.—The Eureka Automobile Co., of San Francisco, has been incorporated under the laws of West Virginia, by C. L. Fair, S. Bennett, G. A. Knight, C. J. Haggerty, and W. H. Kent; manufacturing and dealing in automobiles. Capital stock, \$500,000.

Charlotte, N. C.—Dr. W. J. Cole, of Evansville, Ind., will organize a \$25,000 stock company for the manufacture of his patent bicycle valve in Charlotte.

Chicago, Ill.—The Christy Tire Co. has been incorporated by H. A. Christy, A. D. Eddy and H. H. Dougherty; manufacturing rubber tires, etc. Capital stock, \$100,000.

Chicago, Ill.—The Elastic Hub & Cushion Tire Wheel Co. has been incorporated by S. B. McHenry, M. G. Enright, and J. F. Heatley; manufacturing hubs, tires and wheels. Capital stock, \$50,000.

Indianapolis, Ind.—The Indiana Chain Co. has been incorporated by F. W. Wood, C. C. Shumaker, and D. S. Bray; manufacture chains and stampings. Capital stock, \$50,000.

Milwaukee, Wis.—The Milwaukee Automobile Co. has been incorporated by W. G. Smith, and Herman Pfeil. The company will use the factory formerly operated by the Milwaukee Engineering Co. in the manufacture of bicycles.

Mount Holly, N. J.—The Diebel-Eppler Mfg. Co. has been incorporated by E. Diebel, J. Eppler, and B. W. Story; manufacture bicycles. Capital stock, \$50,000.

Pittsburgh, Pa.—J. P. Kirtland, H. D. McCutcheon and W. S. Armstrong are interested in a company which has been re-

cently organized for the purpose of manufacturing the new Edison bicycle tire shields. It has secured a lease on the plant of the new Kensington Foundry Co., and will enlarge the works, and begin operations immediately.

St. Paul, Minn.—The Goodyear Rubber Co. has been incorporated by F. M. Shepard, F. M. Shepard, Jr., F. S. Minott and J. Suydam; manufacture and sale of rubber goods. Capital stock, \$25,000.

Wilmington, Dela.—The Automobile Storage & Repair Co. has been incorporated by E. R. Allen, F. P. Pace, H. G. Derby; deal in automobiles and motor vehicles. Capital stock, \$50,000.

Changes and Improvements.

Ansonia, Conn.—The Wilcox & Howe Mfg. Co., manufacturers of fifth wheels, bicycle parts and forgings, is to be reorganized. This company has been in the hands of a receiver for two years, and the creditors are now reorganizing same.

Akron, Ohio.—The Rubber Goods Mfg. Co., or rubber trust, has decided to consolidate with the Peoria Rubber Co., of Peoria, Ill., and the India Rubber Co., of this city. The consolidation will be effected at once. The plant at Peoria is being closed out. The machinery will be moved here, and installed in the India plant, as soon as possible. The output of the local concern which is about 800 tires per day, will be increased to more than three times that amount.

Aubrey, Tex.—Ratchford & Mountain, sporting goods, Hardware, etc., business purchased by T. L. Mullins, who will hereafter conduct same.

Burlington, N. J.—Wessells & Gray, partnership dissolved.

Colfax, Iowa.—Kizer Bros. Cycle Co., succeeded W. J. Kizer & Co.

East Hampton, Conn.—The Starr Bros. Bell Co., manufacturers of bicycle, sleigh, and door bells, will shortly bring out a new bell of attractive form and adapted for attachment to the vehicle so as to be operated by the foot.

Fitchburg, Mass.—Nathan & Remington, S. M. Nathan succeeds.

Glens Falls, N. Y.—William A. Tice and Herbert W. Knight have dissolved partnership; Mr. Tice retiring. Mr. Knight will continue business in conjunction with W. J. Guthrie.

Hamilton, Can.—The National Cycle Co., of Indianapolis, Ind., has begun the removal of machinery of the Indiana bicycle plant to this place.

Jersey City, N. J.—Smith & Romaine, DeWitt Romaine succeeds.

Johnstown, Pa.—The Kirk Hardware Co.; wholesale and retail Hardware, sporting goods, etc., business purchased by A. G. Bantley & Bro., who will continue same. The new firm expects to build a new store.

La. Grange, Tex.—J. W. Holloway, sporting goods, Hardware, etc.; M. J. Connell has purchased a half interest in the business

and the style of the firm is now Connell & Holloway.

Le Mars, Iowa.—Haas & Huebsch, Hardware, sporting goods, etc., have enlarged their quarters.

Melrose, Mass.—Smith Bros., No. 8 Essex Street, making additions that will increase their capacity.

New Haven, Conn.—Collett Bros., James Ainscoe retires.

Newman's Grove, Neb.—Battey & Rasmussen, succeed Hinman & South.

New York, N. Y.—The E. & H. T. Anthony Co.; manufacturers of cameras and photographic supplies have sold out their hand camera business to a combination of photographic manufacturers in Rochester, N. Y. The Rochester combination is made up of five well-known manufacturers of camera supplies: The Rochester Optic Co., the Rochester Camera Co., the Ray Camera Co., the Western Camera Co. and the Monroe Camera Co. The combination is capitalized at about \$3,000,000 and is purchasing various manufactories throughout the East.

Pomeroy, Wash.—E. M. Rauch, Hardware, sporting goods, etc., has enlarged his quarters.

Rural Valley, Pa.—Johnston, Beyer & Co., sporting goods, Hardware, etc., new firm, have commenced business.

Uxbridge, Mass.—Joseph Sablom, removed to Gredig's building.

York, Neb.—R. V. Hunter, sporting goods, Hardware, etc., has been succeeded by F. D. Copsey.

Recent Embarrassments.

Boston, Mass.—The John P. Lovell Arms Co., and the John P. Lovell Co., manufacturers of bicycles, fire arms and sporting goods of every description, have made an assignment for the benefit of creditors. The concern has a large store at No. 163 Washington Street, a factory at South Portland, Me., and several branches.

Chicago, Ill.—Albert C. Banker, petition voluntary bankruptcy.

Chicago, Ill.—Charles H. Sterner, petition voluntary bankruptcy.

Salem, Mass.—C. S. Putnam & Co., assigned.

Recent Fires.

New Haven, Conn.—C. O. Wood, store damaged by fire.

Recent Burglaries.

New Whatcom, Wash.—Long Bros.' store entered and robbed of \$60 worth of goods.

Miscellaneous.

Media, Pa.—The Cheyney-Hood Photo Supply Co. at its recent annual meeting, declared a dividend of 8 per cent., and elected the following officers: President, Homer E. Hoopes; vice president and secretary, Justice M. Thompson; general manager and treasurer, J. P. Cheyney. These gentlemen are included in the list of directors, the others being J. W. Hawley, H. M. Wirz, J. W. Allison and George Reynolds.

THE
"HANDY" STEP LADDER

CAN BE EXTENDED TO
DOUBLE ITS LENGTH.

The malleable casings keep the wood from splitting, there is no strain on the screws, and the platform shelf works automatically. The upper tread has iron pins going through to prevent breaking, and flanges keep the ladder from going out of joint. . . .

STERLING SLEIGH BELLS.**N. N. HILL BRASS CO., East Hampton, Conn.****IMPROVED YOUNG AMERICA SCALE.**

It is Made of Steel. White Tile Top. Tin or Brass Scoop Top. Brass Dial

BEST IN THE WORLD.

A most beautiful and attractive scale for all purposes. Beautifully enameled, ornamented and striped. Weighs 20 pounds by ounces. Occupies but little space. Is light and easily moved. It can be regulated by turning the brass screw on top. It is always ready and easily understood. It is a convenient scale to use and has no weights that may be lost. You can look this one in the face to prove its accuracy without looking for weights. Every scale examined before leaving the factory and warranted correct.

CARY'S PATENT HINGE AND HASP

Designed Especially for
 Fruit Crates, Milk,
 Egg, Cracker and
 other styles of
 Boxes, requiring a
 hinged cover.

CARY MFG. CO.,
 19-21 Roosevelt St.,
 NEW YORK.

SAMPLES BY MAIL.

IN our patent loop joint hinge, one part of the loop is made rigid to one-half of the hinge, making the strongest, neatest and best hinge for the purposes mentioned.

Our patent fastening plate and catch which go with the hasp are so perfect in their construction that the catch never gets loose from the plate, as is often the case with others on the market.

When desired, we furnish our hasp and catch with a small hole through each, so that a wire can be inserted and then sealed by use of a lead seal.

IF YOU WANT TO KNOW ASK US

How to file Catalogues, quotations and every class of data, with no more trouble to file than to throw in the waste basket, and as easy to get when wanted as though in your vest pocket.

FOLDING PAPER BOX CO., South Bend, Ind.

"A PROFITABLE MEDIUM TO ADVERTISERS."

Gilbert & Bennett Mfg. Co., Chicago and New York. [Wire Goods]: You have reason to be proud of HARDWARE'S success both as a journal of interest and of usefulness to your readers, and as a profitable medium to the numerous advertisers. From the fact that our card has been steadily published in its columns from the first number, it must be concluded that we have found you a satisfactory medium.

"WANT TO DIGEST THEM AT HOME."

Simmons Hardware Co., St. Louis, Mo. [General Hardware]: Enclosed please find \$2.00, being subscription for two copies of your paper for one year, one of which you will please mail to E. C. Simmons, No. 2727 Olive Street, St. Louis, Mo. The other to A. W. Douglas, No. 2845 Lucas Avenue, St. Louis, Mo. They are for use at the store but we want to digest them at home before we bring them here.

ENAMELINE

W. L. PRESCOTT & CO.
NEW YORK, N. Y.

Can You Afford—

to carry in stock unknown brands of stove polish that your customers know nothing about, brands they do not call for, the quality of which is inferior, gives them dissatisfaction, and the consequent sale of which brings discredit to your store? Your best judgment answers NO! Then sell **ENAMELINE**, the Modern Stove Polish. Paste, Cake or Liquid if you are doing business for a profit it will pay you to handle our whole line.

W. L. PRESCOTT & CO. NEW YORK

U. M. C.

"Smokeless" Shells.

Nitro Powders.

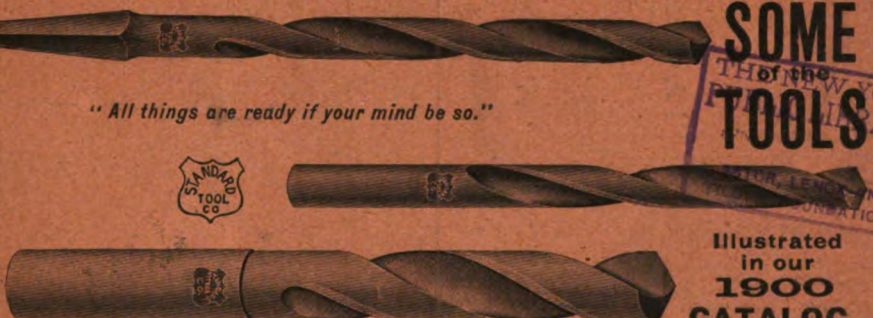

"U. M. C. No. 3" Primers.

All sportsmen know that the hands and arms, in shooting, become accustomed to the recoil produced by any uniform charge—and that the slightest unexpected variation of load will make a perceptible difference in their marksmanship.

It is because of the absolute uniformity of charge in U. M. C. Factory Loaded Shells—and the close attention paid to every detail of construction that they are so deservedly popular—being used more than any other shells of the same grade in the market.

HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. *Size of page, 4 x 7 inches.*

FOUR EDITIONS:

A, 200 pages, - - \$1.00 A 2, 400 pages, - - \$1.50
A F, 200 pages with flap, 1.25 A F 2, 400 pages with flap, 1.75

Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. *Page, 4 x 7 inches.*

FOUR EDITIONS:

B, 200 pages, - - \$1.00 B 2, 400 pages, - - \$1.50
B F, 200 pages with flap, 1.25 B F 2, 400 pages with flap, 1.75

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. *Page, 4 1/4 x 7 1/4 inches.*

FOUR EDITIONS:

C, 200 pages, - - \$1.00
C F, 200 pages with flap, - - 1.25
C 2, 400 pages, - - 1.50
C F 2, 400 pages with flap, - 1.75

Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. *Page, 5 1/4 x 8 inches.*

FOUR EDITIONS:

D, 200 pages, - - \$2.00
D F, 200 pages with flap, - 2.50
D 2, 400 pages, - - 3.00
D F 2, 400 pages with flap, 3.50

Price Book D.

MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, turn to AU For Chisels, turn to CH For Iron, turn to IRO
" Parers, Applo " PA " Cutlery, " CUT " Irons, " IR'S

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

1900

HOWEVER scholars and scientists may differ as to whether the year 1900 is the last year of the old or the beginning of the new century, we think that business men may be assured that it will break all former records in a business way. A few things will doubtless decline in price, but the vast majority of substantial articles which make business cannot decline at present, and the dealers who hesitate at the beginning of the new year are likely to get left without stock. You know we make cutlery in great variety, and are ready for business. We were, however, completely overwhelmed with orders in 1899. It will take a much larger trade to do it in 1900. But do not procrastinate.

Eclipse Refrigerator Works, Burlington, Vermont.

HARDWARE

John H. Graham & Co., No. 113 Chambers Street, New York, have been appointed by the Alden Rubber Co., Akron and Barberton, Ohio, general sales agents for the distribution of their bicycle and vehicle tires, molded and mechanical rubber goods.

The Simmons Hardware Co., of St. Louis, Mo., the leaders in commencing the profit-sharing system among their employes, for the year 1899 have made the largest division of profits since the inception of this important feature of their business. As they do the largest jobbing business in the world, they show in this a characteristic worthy of being followed.

Kilbourne Mfg. Co., manufacturers of wire goods and specialties, Fair Haven, Vt., have opened an office at No. 90 Chambers Street, New York, which will be under the charge of C. E. Peabody. It is their intention to carry a full line of samples of their wire goods for stationers and household use at this address, and those desiring to avail themselves of the facilities thus provided, will be made welcome by Mr. Peabody at any time.

Arthur T. Rutter, who for a long time was associated with the late William S. Fearing, No. 256 Broadway, New York, has succeeded to the business so well established, which he is engaged in carrying on at the old address. Mr. Rutter's sales include sheet brass, German silver, copper, brass and German silver wire, brass and copper tubes, (small tubing a specialty), brass and copper rods, brass ferules, sheet and ingot copper, spelter, tin, antimony, lead, etc.

C. R. McCarey, who for several years has been connected with the house of John H. Graham & Co., New York, intends going to Cuba January 25th, and will assume charge of the Hardware department of the Gomez-O'Brien Co., located at O'Reilly 17, Havana. For this department the house export such lines as plumbers' supplies, sugar plantation machinery, refrigerators and ice making plants, etc. The New York office of the above Cuban company is at No. 234 Broadway.

The Metal Goods Mfg. Co., Cleveland, Ohio, recently organized, are erecting a building 275x50 feet, two stories high, near the corner of Hamilton & Coe Streets. The buildings containing the power plant will be separate from the main building, and in every respect the establishment will be up to date. The buildings are nearly under roof and the firm expects to have its line of Hardware specialties ready early in March. S. D. Latty, general manager of the Kirk-Latty Mfg. Co., will be manager of the new firm.

Of course, in a business of \$160,000,000, it is not to be expected that 20 per cent. profit is possible, or even 10 per cent., but that on an amount so vast, only 1.41 per cent. were obtainable, goes to show how, on so vast a business, even this small dividend is worth considering. It is said that the gross sales of Swift & Co., meat packers of Chicago, reached the amount above named, and that the net

profit for the year 1899 was \$2,252,065. How many concerns in this country could reach this volume of business, and how few would be satisfied with the grand result?

An effort is being made by some of the big department stores to have the postal laws changed so that packages up to 11 pounds in weight may be sent by mail at third-class rates. The limit now is four pounds. As so radical a change would largely increase the mail order business of these establishments, to the detriment of the cross-road dealers and country merchants generally, who would find all the ready cash sent to the cities and "barter" only comprise their trade conditions, the suburban dealers are up in arms against this movement, and will be heard from with no uncertain sound.

Our esteemed contemporary, the *Blacksmith and Wheelwright*, published by M. T. Richardson Co., No. 27 Park Place, New York, recently issued an anniversary number commemorating their "Twentieth Anniversary." It was a most ambitious paper, of 80 pages filled with interesting articles having reference to the business of which this organ of trade is the chief exponent; and crowded to its covers with still more interesting pages of advertising, that more fitly represents the prosperous conditions surrounding the industry which 20 years ago possessed no such evidence of being worthy of this fine specimen of trade literature. May it live to celebrate its 50th anniversary, and show as great an advance in journalistic importance.

J. D. Barber who will be remembered by the Hardware trade as having in previous years represented Landers Frary & Clark, in New York and Pennsylvania, has recently connected himself with Alfred Field & Co., No. 93 Chambers Street, New York, who are known throughout the country as the oldest cutlery house in New York City at the present time, having been established since 1836. Mr. Barber will travel largely through the territory previously covered by him, and will do his utmost to introduce to his old customers and many new ones, the lines of goods controlled by Alfred Field & Co., the selling merits of which have long been unsurpassed. He started on his travels about the 15th inst. through Western Pennsylvania and will reach New York State in March.

The plant of the E. S. Stiles Press Co., of Watertown, N. Y., including patterns, patents, machine tools, etc., has been purchased and will be operated by G. A. Crosby & Co., Chicago, Ill. The plant is now being installed and the purchasers announce that the orders will be accepted for early delivery. The reputation of G. A. Crosby & Co. for the highest grade of workmanship and their many years of experience in the manufacture of presses, dies, and special machinery, guarantees careful and accurate attention to all possible requirements in construction. We learn with much pleasure that E. S. Stiles, the former treasurer of the E. S. Stiles Press Co., has associated himself with G. A. Crosby & Co. and will give his personal attention to all matters pertaining to the old business. This gives a positive assurance that all orders formerly filled by his old company, will receive prompt and satisfactory execution.

HENRY HOPKINS,	Editor.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

Editorial Trade Review.

The season for the wholesale trade opens in a very confident manner. Any efforts made by dealers to keep stocks only uniformly fair would result in shortages of stocks a little later, unless their watchful eye was kept over the matter. Without good stocks there would result loss of profits on sales that might have been. Most of the jobbers at the present time are going carefully over the salesmen's catalogues, marking prices up to date or down to date, as the revision may make necessary. A few goods are easing up in the stiffness of previous quotations, but the preponderance is in favor of an averaging of prices that will show advances on items that have heretofore been very close.

Large orders for nails based on the last advance are not so prevalent, as most of the dealers think the limit of advance is already reached, when comparison is made with old prices and present cost of raw material.

The nail bills in future will be looked after more carefully by the jobber now that they represent so much money standing out on a low rate of profits, and where a retailer's bill is fifty or sixty per cent. nails, he will be urged more closely for settlement if cash discount periods are exceeded. No jobber can afford to let that kind of a dealer speculate in larger lots than his trade demands when he does so with the cash which is due the jobber.

Wholesalers and retailers are selling goods to their customers with greater ease and less caviling about prices than ever before in the recollection of the trade. Some articles of large consumption generally, like barbed wire, may find purchases restricted on account of the advance in prices, but this will result in any event in nominal sales which in amount of cash requirements will compare with purchases of previous years.

The prospects are, and they are worthy of contemplation, that this year will see less cutting of prices and far less temptation to do so, than last year.

Considering the increased capital now necessary to carry on a successful business, collections are reported as being exceedingly good, with few if any failures to throw a cloud over present industrial sunshine.

The contemplated output of many of the manufacturers' products is already on the order books for present and future delivery, factory limitations being reached. Orders are turned down, and quotations braced up by the retirement from the field of another competitor. The fact that the trade this year commences with little desire to sell goods at prices ruling a year ago, even on old stock, will have its effect on

the volume of monthly sales, which cannot do otherwise than show an increase in dollars and cents of gratifying importance. The jobbers will be glad to see old contracts completed if it is only to be sure they will get all the goods to which their early orders entitle them, and also because the manufacturers will then have no complaints to make as to the unprofitableness of some of the trade of last season.

Even the railroads, notwithstanding other indications of prosperity, have deemed it advisable to increase their rates, in order to get a larger share of the prosperous conditions floating around. It would have seemed all right to the jobbing fraternity if they could have had some speculative orders booked ahead for a number of carloads of freight yet to be handled.

The feeling prevailing in some quarters of a possibility of prices declining some time in the future, would seem to make little headway when recent large enterprises, in which iron and steel are greatly represented, shall have been understood. The \$35,000,000 contract for the underground railway system in New York is but one of a number that will make the iron and steel makers able to ask high prices for their product for some time to come. Railroads throughout the country are improving their equipment in every respect, taking advantage of the prosperous conditions that enable them to find the ability to pay for the same. There is every indication that railroad building itself will not extend to any great proportions, but many improvements will be made that will benefit the railroads by giving them improved rolling stock, and new rails to run on, that will have its effect on the iron and steel market. All these indirectly affect Hardware manufacturers, and should naturally indicate that the likelihood for any decline of an important character is still in the dim future.

The Influence of the Hardware Association.

The influence of the trade organizations upon the general welfare of the Hardware industry never assumed such strength as at the present moment. The growth in every State of these formidable bulwarks for successful trade has been remarkable. Conventions annually called have developed resources for prosperous propagation of businesslike methods, which have brought order where chaos previously reigned and made business life worth enjoying.

The combined intelligence of the leaders in this important movement thus brought together, has produced results in which are prominent the most harmonious relations between competitors, a wide distribution of wise methods capable of actuating all dealers alike, and the domination of an unselfish elevation of this conservative business, which possesses more of the attributes of trade training than any other of equal importance. All this has germinated from the smallest beginnings, amid ungenerous misapprehension of aims and motives, until to-day it exemplifies to the entire globe the highest aims that may stimulate trade ambitions and with a purity of purpose which commands the other commercial nations to go and do likewise if they would prosper.

This grand result, so successfully achieved by concert of action and persistent effort, has made it possible for business to be accomplished without the irritating friction so inseparable from the more primitive methods of our grandfathers, so that it becomes in its har-

monious perfection a higher grade of trade unionism affecting incorporated interests instead of individuals. How truly worthy this is of the encouragement and esteem of all who respect commercial probity, business honor and a love for industrial honesty of purpose, as compared with such selfish motives and corrupt advantages which unavoidably affect business relations when formed without a community of interests, which is the motive for organization so prevalent in this concluding year of the nineteenth century.

Selling Sewing Machines.

Our series of articles on "Sewing Machines and the Hardware Trade" have received serious attention by Hardware jobbers in many sections of the country, and we take pleasure in publishing in our present issue the sixth article of the series. This is by the author of the contribution in our previous issue, who designs his articles to apply more particularly to the interests of the Hardware jobber wishing to introduce this new line, and will form a booklet on the subject at a later date with this purpose in view. Under these circumstances the author reserves all rights as to future use, his present intention being to contribute one or more papers to the series.

The Foreign Commerce of the United States.

The foreign commerce of the United States in 1899 amounted to over two billion dollars, and of this enormous sum more than three-fifths were exports and less than two-fifths imports. The exact figures, just issued by the Treasury Bureau of Statistics, are: Imports, \$799,834,620; exports, \$1,275,486,641; excess of exports over imports, \$475,652,021. The excess of exports is larger than in any preceding year except in 1898. Of the exports, manufactures form a larger proportion than ever before, while of the imports, raw materials for the use of our manufacturers form a larger proportion than ever before. Of the exports more than 30 per cent. are manufactures, against 26 per cent. in the fiscal year 1897, 23 per cent. in 1895, 20 per cent. in 1885, 16 per cent. in 1879 and 12 per cent. in 1860. Of the imports, 33 per cent. are articles in a crude condition which enter into the various processes of domestic industry, against 26 per cent. in 1895, 24 per cent. in 1892, 23 per cent. in 1889 and 20 per cent. in 1885. Products of agriculture form 63 per cent. of the exports, against 70 per cent. in 1898, 72 per cent. in 1894, 74 per cent. in 1884 and 83 per cent. in 1880, while agricultural products classified as "articles of food and live animals" form 29 per cent. of the imports, against 30 per cent. in 1896, 31 per cent. in 1886 and 34 per cent. in 1884.

A study of the imports and exports of 1899 compared with those of earlier years presents some interesting facts. From 1869 to 1899 imports doubled while exports quadrupled. The imports in 1869 were \$438,455,894 and the exports \$337,375,988, making an excess of imports over exports amounting to \$101,079,906, while, as above indicated, the excess of exports in 1899 is \$475,652,021. Relatively, the proportion of free and dutiable goods in the list of imports differs very greatly in the figures of 1899 from those of 1869, only \$21,775,643 of the total of \$438,455,894 imported in 1869 being admitted free of duty, while in 1899 \$351,814,004 of the \$799,834,620 imported came in free of duty. Exports of foreign merchandise form a smaller percentage year by year of our total exports, though this is due to the very rapid increase in exportation of domestic merchandise, the value of foreign merchandise exported in 1899 being about double that of 1869, while the exports of domestic merchandise in 1899 were four times as much as in 1869.

Death of Henry Watts Merchant.

The many friends of Mr. Clarke Merchant, president of Merchant & Co., Incorporated, of Philadelphia, will deeply sympathize with him in the loss of his only son, Henry Watts Merchant, who died in Phoenix, Arizona, January 9, in the thirty-seventh year of his age.

Mr. Merchant left Philadelphia about four months ago in a vain search for health in the dry climate of Denver, traveling from thence to Salt Lake City and to Pasadena, from whence came most gratifying reports of improvement. It was therefore a great shock to his relatives and friends to learn of his sudden decease. Mr. Merchant had been associated from boyhood with his father in the tin plate industry, managing the extensive works in Philadelphia and traveling through Europe in the interests of the company.

He was considered as one of the ablest young business men of that community. He was treasurer of Merchant & Co., Inc., and had recently been elected vice president of the International Sprinkler Co. of that city. He was also a member of the Loyal Legion and of the Philadelphia Club. Mr. Merchant is survived by one young daughter, his wife having died several years ago.

New Members of the Hardware Club.

At the meeting, on January 12th, of the board of governors of the Hardware Club, of New York, the following gentlemen were unanimously elected to membership in the Club:

Henry L. Freeland, No. 70 West Street.
Walter P. Hudson, St. Louis, Mo.
John O'Brien, No. 253 Broadway.
Duncan McBean, No. 253 Broadway.
Paul T. Brown, No. 76 Hudson Street.
John B. Watkins, No. 9 Murray Street.
Henry F. Devens, No. 95 Liberty Street.

A Committee on Entertainment.

A very large and representative committee of manufacturers and jobbers, Cleveland, Ohio, has been appointed, and a liberal amount of money raised to entertain the Ohio Hardware Association, which holds its convention in Cleveland on February 28th.

The Cleveland people desire to show their good will towards the Hardware retailers of the State, not only in giving them a good time, but in helping them to strengthen their organization for their mutual benefit.

The following committee has been appointed for this purpose:

C. S. Van Wagoner, Chairman, Van Wagoner & Williams Hardware Co.
W. M. Powell, first vice chairman, Ferrosteel Co.
H. F. Lyman, second vice chairman, Upson-Walton Co.
J. Q. Riddle, treasurer, Lockwood-Taylor Hardware Co.
M. A. Havens, secretary, Chamber of Commerce.

The "Tradesman's" 21st Annual.

We are in receipt of the 21st Annual number of the *Tradesman*, which as usual is filled with a number of special articles extremely interesting and valuable to all who have the interests of the progressive South at heart.

Careful attention should be given to these important contributions to trade literature, as they were written by experts thoroughly posted on the subjects treated by them. The paper as a whole, is a most valuable compendium of the progress of Southern industries ever presented.

A law has been enacted in Germany which requires that all drugs intended for internal use shall be put up in round bottles, while those for external use shall be put up in hexagonal bottles.—*Exchange*.

Reunion of the Du Pont Family.

The descendants of Elenthere Irenee Du Pont de Nemours, founder of the Du Pont powder works, celebrated on January 1st, the one hundredth anniversary of his arrival in this country. The celebration took the form of a family reunion and was held at the residence of Mrs. Lamont Du Pont, Saint Amour, on the Kennett turnpike, near Wilmington, Delaware.

Much interest was attached to the reunion, and DuPonts from New York, Louisville and other places were present, in addition to the numerous members of the family who make up the DuPont colony on the Brandywine. Great preparations were made for the occasion, Mrs. Lamont DuPont enlarging her already extensive mansion by the addition of a huge temporary dining hall. This was handsomely bedecked, the walls being hidden by hangings of white and blue, tall ferns and tropical trees and plants being ranged about in luxurious profusion.

The party, numbering 125, sat down to dinner at a table in the form of the letter U, elegantly appointed and decorated with carnations and roses. For the children a special table was spread in the regular dining room, where twenty were seated. Bishop Leighton Coleman, of the Protestant Episcopal Diocese of Delaware, whose wife was a DuPont, asked the blessing. The family history was read by Pierre S. Du Pont, who also pronounced the benediction.

A jolly feature of the dinner was the eating of "Johnny cakes." It is a family tradition that when Elenthere DuPont landed in Rhode Island he sought the hospitality of a farmer, who served him corn cakes for dinner.

GROWTH OF THE DUPONT FAMILY.

Elenthere Irenee DuPont, together with his father and brother Victor and their families, landed at Newport, R. I., January 1, 1800, and in 1802 Elenthere established the powdermaking industry on the Brandywine. He had learned powdermaking at the government mills in France, but he and his father were strong advocates of a constitutional government, and were in the stormy scenes of the French Revolution, and it was when they despaired of the political future and were ruined in fortune that they turned to this country. From the small beginning in 1802 the powder works have become probably the largest in the country. Their founder died in 1834, of cholera, in Philadelphia.

F. W. Heitmann & Co.'s New Catalogue.

F. W. Heitmann & Co., Houston, Texas, have recently issued the most important catalogue with which the name of this firm has been connected. It is a well printed volume of 434 pages, handsomely illustrated, and printed on excellent paper, and strongly bound in cloth with stiff covers; gilt name on back, and also on cover. The contents, embracing machinery, heavy Hardware and mill supplies, are given in an admirably arranged index, covering 26 pages, in which every item is shown under every possible name; and gives ample evidence, if any were needed, of the extensive line of heavy goods and factory supplies carried in stock by this progressive house. A pair of illustrations which commence the pictorial display within the covers show in two interior views of one of their warehouses, their stock of "wrought well casing and boiler tubes," and "small sizes of wrought gas, steam and water pipe," which Heitmann & Co. claim cannot possibly be surpassed by any similar stock in the entire South.

In addition to the goods mentioned above as being in large display, the catalogue covers wrought pipe fittings in greatly extended variety, and other malleable fittings of equal importance; brass steam fittings and valves in large varieties, including safety, butterfly, lubricator and throttle valves; gauges of every description, including vacuum, hydrostatic, ammonia and water; injectors and inspirators,

etc. The volume is a very ambitious one, and covers an immense field in the several departments indicated by the above slight reference to a portion of its contents. A number of pages are devoted to many useful tables of dimensions, sizes and comparisons always acceptable to the general dealer, whose sources of such information are usually of a limited character.

This catalogue is the first issue of the kind ever published by any Hardware jobbing house in Texas, over one year having been devoted to its compilation and publication. Their design in compiling it was to show strictly such lines of goods as were carried regularly in stock and always on hand for prompt shipment.

In their extensive business, F. W. Heitmann & Co. make a specialty of the heavy Hardware, machinery and machinery supply business; carrying also full lines of tools and some of the heavier articles used in the light Hardware business.

Besides their regular storehouse, they occupy two large warehouses on the railroad track, in which is stored exclusively machinery, wrought pipe, all kinds of roofing, poultry netting, nails, wire and wire rope.

This extensive business was established in the early days of Texas by F. W. Heitmann. Those were the days when all the heavy lines were imported direct from foreign countries. F. W. Heitmann died in 1889, since which time the business has been conducted by his only son, F. A. Heitmann, who continues it under the same style as the old firm, the name of which has never been changed.

American Cutlery Co.

Prosperity in an exceedingly large measure has been enjoyed by the American Cutlery Co., No. 120 Randolph Street, Chicago, Ill., during the year which has just ended. Isaac Hirsch, president of the company, says that 1899 witnessed the largest volume of business which the company has experienced since its inception. At present the concern is obliged to run its engines fourteen hours a day in order to keep pace with the orders which are daily received in the ordinary business.

Expansion of business in the concern's various departments has made it necessary for a new building to be constructed. Plans have been prepared and approved for one of the largest and best equipped factories of this kind in the United States. The company has recently purchased three large lots adjoining its present property and will start immediately to build a factory edifice which, when completed, will have a frontage of 337 feet, and will extend back 120 feet from Mather Street, where the factory is located.

The new building will be six stories high, mill construction. The Mather Street side will be of pressed brick with terra cotta trimmings. The present plans, if adhered to, insure a structure which will be beautiful in its simplicity and appointments. The down-town show rooms of the American Cutlery Co. are located in the best known and most widely advertised building of the city of Chicago—the Masonic Temple. The show rooms are the most attractive in this sky-scraping building, and the line exhibited is unequalled in its extent or in the superior attractiveness of its display.

The Young America Scale, which the American Cutlery Co. announce in this issue is one of the most popular scales on the market, and wide-awake Hardware men will find this device a most desirable and profitable addition to their stock. This scale has a number of special advantages that add largely to its salable merits. Enquiries addressed to the factory, No. 193 Mather Street, Chicago, will receive immediate attention.

The greatest whiskey industry is in the United States, the output being more than 80,000,000 gallons a year.—*Ex.*

THE SIXTH ANNUAL SPORTSMEN'S SHOW.

Preparations for the Sixth Annual Sportsmen's Show, to open March 1st to 17th, at Madison Square Garden, have been going ahead quietly but to such good purpose that the foundations and framework of the enterprise are now practically complete, and within the next few weeks the finer details of the prettiest and most realistic picture ever presented to sportsmen within the limits of a great metropolitan center will be under way.

The judgment shown by the management last year, in changing the character of the show from an exhibit of sportsmen's supplies and equipments, pure and simple, to a magnificent and realistic reproduction of the hunter's camp, surrounded by all of the essential environments of life in the woods and upon the stream, was so warmly endorsed by the public, that this year every effort will be made to build up and improve the exhibit along the same lines. Consequently the interior of the big garden will this year be more attractive than ever before, to all who love the gun, the rod and the rifle; to those who love the scent of the balsam and the fir; and who would rather spend one brief week in the wilds of Maine or the Adirondacks than take a trip to Europe. The coming show will contain all of the desirable features of past shows, and the management have readily adopted every new feature that has suggested itself to them or that has been suggested by others, in the least calculated to broaden the scope and add to the attractiveness of the sixth annual exhibit.

The show of 1899 was a revelation to many who had formed no conception of the magnificent spectacle that met the eye when the doors were thrown open to the public last March. Consequently, some interests that would have added not a few strong features to the exhibit were not represented. These same interests, however, have been among the first to get into line for the show of 1900, and they are of such a character that material and valuable additions to the exhibit are assured.

The general effect of last year's show will be preserved; some details in point of arrangement, however, will be changed. The game park, while it will occupy the same location as in '99, will be more symmetrically and attractively laid out. The display of big game animals will embrace a greater number of really choice specimens than has ever before been brought together in the metropolis. Back of the game park and extending across the arena, is the space set aside for power launches, boats and sportsmen's craft of various styles and designs. This space is 75x10 feet in size, and will contain, collectively, as imposing and interesting an exhibit of small craft as it is possible to conceive. The leading builders of the country have taken space, and models will be shown, well calculated to set every lover of boating to figuring on the state of his finances, and the probable amount he can afford to lay out for this particular luxury this year.

The next feature, as one leaves the boats, is the canoe camp. On a gentle slope of ground at the western end of the artificial lake will be laid out an ideal canoeist's camp, just such an one as attracted hundreds of canoeists to the annual meet of the National Association in the Thousand Islands last year and the year before. This exhibit is in charge of a prominent and popular member of the National Canoeists' Association, and some rare relics of past meets, as well as some splendid specimens of the canoe builders' art, are promised.

The artificial lake will this year be surrounded by a

rustic hedge eighteen inches high, and as the board floor of the Garden will be entirely removed, leaving the surface one of leaf-covered earth, just as one would find it in the woods, the shores of the lake will appear precisely the same as those of a natural pool. In this lake will be conducted the aquatic competitions that proved so popular a feature last year. William B. Curtis, the father of amateur athletics in America, will have sole charge of these competitions, which will attract the most expert swimmers and cleverest water poloists in the country. The hunters' camp, as last year, will be located upon the hill at the eastern end of the lake, and will be an improvement even upon the beautiful production of last year. All who visited the show of '99 will recall the magnificent drop, showing the glaciers and mountain ranges of the far Northwest. The drop this year will represent a superb glimpse of the famous Yosemite Valley, and it is said will be the most magnificent and realistic painting of this famously beautiful spot yet seen in the country.

Upon one side of the artificial lake will be located the aquaria, and as the New York State Fish and Game Commission will make the exhibit, it is safe to say that there will be no lack of material calculated to interest the fisherman. Upon the opposite side of the lake will be seen the exhibits of live game birds and carnivorous game animals. The bird exhibit is again in charge of Mr. Verner de Guise, and he promises the choicest collection of live game birds yet seen at any Sportsmen's show. Elmer E. Shaner will handle the trap shooting events upon the roof, which insures some rare good shooting during the show, and Zettler Bros. will look after the rifle and revolver ranges in the basement.

As to the exhibitors of sportsmen's supplies and equipment, all of the leading exhibitors of last year are in their old spaces, not a few of them having doubled and trebled their space for this year. Many new features are now being negotiated and arranged for, which will make the show of 1900 far superior in attractiveness even to its brilliant predecessor of 1899. These will be announced as plans for their production are perfected.

E. C. Atkins & Co.'s Recent Fire.

In reference to a small fire which occurred in one of the departments of the E. C. Atkins & Co.'s saw factory recently, the extent of which having been greatly exaggerated, the company have deemed it advisable to issue the following circular:

Indianapolis, Ind., January 4, 1900.

NOTICE TO THE TRADE.

As it seems the very small fire that occurred in the wood working department of our plant a few days ago has attracted considerable attention through the press reports, we desire to take this means of advising our friends, and the trade generally, that the production of our saw factory proper was in no way interfered with, and that our handle department was only temporarily interrupted.

We have new machinery already in and are now running night and day with greatly increased capacity, and having a large stock of raw material on hand we expect to be able to serve our trade more satisfactorily than before.

Yours truly,

E. C. ATKINS & CO., Inc.

E. C. ATKINS, President.

Gutenberg invented printing by using movable types, while Mergenthaler, who also marked an epoch in the art of printing by his invention of the linotype machine, virtually discarded them.—*Scientific American*.

Yale & Towne Mfg. Co.

Yale & Towne Mfg. Co., Nos. 9-13 Murray street, New York, own extensive plants both at Stamford and Branford, Conn. The growth of the company's business has been so great that extensive additions to both plants are contemplated, and the plans under consideration are for the consolidation of the Branford business with that of Stamford by building the necessary additional factories which the changes would compel. The Stamford plant, situated only thirty miles from New York, is modern in construction in every respect, and possesses ample room for any expansion that may be considered essential. One of the reasons why a consolidation is thought to be desirable is the fact that the Branford plant is anything but modern and up to-date, is built on the old methods that obtained a quarter of a century ago, and any extension to its present facilities would be far from complete and involve unnecessary expense. The products of the two plants are of similar character, so that the effect of their consolidation would make an economic saving in many departments.

As no changes can possibly be made to advantage within a year, business will be continued as at present for some time to come. As a great many rumors have been afloat in regard to the contemplated changes and improvements which no doubt have made their employees at Branford somewhat restless as to the future, it was deemed advisable to inform the employees that these plans were being considered, and give them all the time that was necessary to provide for what changes might possibly follow. But as the interests of the Branford employees will not be affected to any extent for the present, no fears are entertained but that by the time the change is necessary the employees will be satisfied to transfer to Stamford. As the Branford Lock Works, which is the plant that it is deemed advisable to transfer, have on the payroll from 500 to 600 persons, it can readily be seen how important a change of this kind would be, and how necessary it is to give it some consideration in advance of any contemplated movement. For a number of years the Branford Lock Works have been owned and operated by the Yale & Towne Mfg. Co., and this fact, as much as anything, makes it desirable to consolidate the two plants.

Chas. Millar & Son Co.

The old and successful firm of Chas. Millar & Son, Utica, who have been conducting a wholesale business in Hardware, tanners' and plumbers' supplies, for many years, have recently been incorporated as Charles Millar & Son Co., under the laws of the State of New York, with \$200,000 capital. The business was originally started by Charles Millar in 1861. In 1866 the firm was organized by the admission of Henry W. Millar, and the firm name has never since been changed. In 1890 Mr. Charles Millar died, and on August 4, 1899, John L. Murray, who in 1883 had been admitted as a partner, also died. The business has since been carried on by Henry W. Millar, the sole surviving member of the firm. The latter, in order to relieve himself from some of the close application and attention required in so large a business, and also to secure perhaps a greater degree of permanency, decided to incorporate the business, and in doing so secured the co-operation of the following gentlemen, who will act with him as directors: Charles S. Symonds, Nicholas E. Kernan and John A. Kernan, of Utica, N. Y., and Edward G. Wagner, of Whitesboro, N. Y. The officers of the company, elected by the directors are: Henry W. Millar, president and treasurer; Charles S. Symonds, vice-president; John A. Kernan, secretary; Levi H. Birdseye, manager; Alfred H. Dobson, assistant treasurer. The business in all its branches will be continued by the new company.

Seeger & Guernsey's New Cyclopædia.

The fifth edition of Seeger & Guernsey's *Cyclopædia of the Manufactures and Products of the United States* has just been published. It is a large volume containing some 1500 pages substantially gotten up and comprises well-nigh every article manufactured in the United States with a liberal number of names of the most prominent makers together with their addresses given under each article. The book has become the standard work of its kind and the preceding editions have been in general use by export merchants, railroad purchasing agents, buyers for department and country stores and manufacturers. The information contained in the volume was obtained as far as possible from the manufacturers themselves by means of an elaborate system of correspondence in the course of which a list of each maker's goods was made up by the compilers and submitted to him for revision. The classification is most minute and is similar to that in the previous editions, but the number of articles given is greater by 25 per cent., due to the important increase in manufacturing activity during the last few years. Especially noticeable are the changes in the departments of machinery, electrical apparatus and vehicles, a respectable list being given of manufacturers of automobiles in spite of the fact that that branch of industry is still in its infancy. The price of the book is \$10 and is published by the U. S. Industrial Publishing Co., No. 31 State Street, New York.

Greene, Tweed & Co.'s New General Catalogue.

Greene, Tweed & Co., No. 17 Murray Street, New York, have recently published the most important catalogue to which their name has been attached since the inauguration of their progressive business. It is a handsomely bound volume, with gilt back and side titles, 380 pages of tools and supplies for manufacturers, mills, railroads, engineers, contractors and machinists. It is printed on good heavy paper, well arranged and with complete descriptions of special appliances for the skilled workman in the above mentioned important branches of business. Every page is fully illustrated, and months of care have undoubtedly been given to the compilation and preparation of so desirable a volume for the proper and intelligent prosecution of so important a business as is evident from the well filled pages of the catalogue. It would require more space than we can devote to it to convey even a slight idea of its contents, described in the extensive index; but Greene, Tweed & Co., are known throughout the trade as manufacturers of Blake's Improved Belt studs, Moran's and "Crescent" round belt couplings; "Empire" or Elliott's lace cutters and Lathrop's patent belt awls; "Favorite" reversible ratchet wrenches and Baxter adjustable S wrenches; "Manhattan" and "Palmetto" self-lubricating plumbago packing, "Royal," "Crescent" and "Union" square braided flax packing, "Champion" flat rubber core packing and "Trumpet" round rubber core packing. They are also sole agents for "Champion" chain pipe wrenches and importers of English tanned walrus, buffalo, bull necks, etc.

A motto displayed in a Kansas City department store reads, "We carry nothing beyond its season." If the merchant really does business in this way, and has no out-of-date goods, and carries nothing in stock longer than its season, he is quite sure to draw trade with such a motto. However, if he puts up a sign of that kind, inviting customers to examine his goods, and they find the goods are not strictly in season, and are not exactly as represented by the sign, the merchant will be the loser. Store mottoes are good things and should be used plentifully in all country stores. They should be neat and attractive, neither too large nor small, and there should be no pretense at fancy lettering. Above all other considerations, they should be truthful.—*Merchants' Journal*.

THE MEN OF OUR TOWN.

We mean the Hardwaremen. Of all men they are the ones which we first recognize, inquire about and size-up.

We can boast of four of them in our little town and if you approach any of them and get sufficiently intimate to learn their ideas of the business in general they will all end up with the sentiment "that there isn't much in Hardware anyway; it's a pretty mean business and they wish they were out of it."

Let us get a little more intimate acquaintance with these gentlemen.

NOGGS.

First there is Noggs; a man of medium height, slender build, spare and angular; nose, the most prominent feature on his facial map, which is discernible a block away. His clothes are of sombre shade and glossy and slightly ravelled at his coat, cuffs and trouser leg. His black necktie is of a decidedly greasy and mussed appearance, and altogether he reminds one of an antiquated garden weed gone to seed. He is chairman of the school board, and regularly visits the schools, and now and then by invitation gives a tiresome address to the pupils upon the necessity of truth and other wholesome virtues. He is president of the Young Men's Christian Association, a prominent official in the local prohibition league, a member of the finance committee of the board of aldermen, church warden and man generally respected and sought for advice by those in need of it. He is considered a model citizen—and so he is; no one can point at him the finger of scorn or accuse him of betraying a trust or guilty of a dishonorable act. But to those who believe that "charity begins at home," he has made a mistake, and is rounding out a misspent life. While giving up his time and strength for the public weal his store is not what it should be; and now, at sixty years of age, he finds himself unequal to the task of meeting competition, and therefore business is very low with him, and indications point to the time when some morning Noggs will not take down the shutters nor pull up the blinds, for the sheriff will hold the key of the old-time Hardware store round the corner.

PUFFIN.

Puffin sells groceries as well as Hardware. He is a bachelor of fifty-five, and as he has inherited that Scotch tenacity for the pennies he has a comfortable bank account, and takes no thought of creditors. He has learned to be independent and can afford to treat the traveling men in the gruffest and most surly manner. In fact they all know him well, as he has kept them waiting time and again with the expectation of an order which he as often refused to give. They now seldom visit him, and his dust-covered shelves and rusty shovels attest to the fact that as an enterprising Hardware merchant he is not the man we are looking for.

SPRIGG.

Sprigg is a middle-aged man of ordinary ability. He has been in the Hardware business for twenty years and is worth little more to-day than when he started. He is popular with travelers, affable, and always has an order for them. In fact sometimes he thrusts himself in their way when they would sooner avoid him; especially when his account has exceeded the credit limit with the house. He is more anxious to buy than he is to provide for his maturing paper, and the consequence is he is generally overstocked and loaded up with last year's goods. He carries fully twenty-five per cent. more stock than is necessary,

and is always behind in his payments. He is a prominent member of his political party and occasionally takes the field as stump speaker during election times and does effective work for an amateur. He is a clever salesman and does more business than any other Hardware merchant in town; but—he is not making money.

BERKES.

The neatest, most attractive goods fairly well displayed in window and inside the store, is the store of Berkes. Berkes is a young man, on the sunny side of forty, brought up in the business in his father's store, who died five years ago and left a snug fortune to his family. A business which if watched with only ordinary care would be considered a small Klondike to most mortals. But he wants to sell out and go to South Africa, as our town is too slow for him, and the Hardware business is a dull affair anyway. Money can't be made in Hardware now like it could when his father started out, as they made a profit on what they sold. But there is no money now in selling nails at an advance of twenty-five cents a keg.

We will not be surprised if we hear of some young clerk buying out Berkes and giving an object lesson to these old fossils of "how to run a Hardware store."

LYLE MERTON.

The Bissell Banquet.

On Friday evening, December 29th, the officers of the Bissell Carpet Sweeper Co. and their traveling salesmen, met in the Morton House, Grand Rapids, Mich., and enjoyed a banquet and general good time that will be long remembered by all those who participated.

Short speeches were made during the evening by Maurice Shanahan, R. E. Shanahan and Mrs. Bissell, and in behalf of the salesmen, a very happy response was made by C. B. Howard, the New England representative of the company.

The occasion was much enlivened through the sudden appearance of that inimitable entertainer, Paul P. Davis, who at an opportune moment entered the room where the banqueters were seated, carrying a Bissell sweeper in one hand and a travel-worn valise in the other. Witty conundrums and suggestions were fired at Mr. Davis in rapid succession by the Bissell travelers, to all of which he responded so pointedly and pertinently as to call forth peals of laughter from the entire gathering. Mr. Davis then gave the banqueters some of his brightest stories, which were greatly enjoyed, and which stimulated the Bissell men to their best efforts in story telling.

It was an unique idea of Mrs. Bissell's to have those present occupy seats at the table according to the number of years they had been connected with the company, this fact being designated by neatly prepared cards which were placed at each plate, and lettered with the person's name and the year he commenced service with the company.

The following persons were present at the dinner: Mrs. M. R. Bissell, M. Shanahan, R. E. Shanahan, John Shanahan, F. McR. Deane, W. E. Gill, C. H. Bass, C. B. Howard, E. H. Hudson, C. C. Woodruff, J. S. Knox, J. J. Van Leuven, T. M. Roche, C. F. Powers, L. F. Bauer.

The territory of the United States is so large that she has winter in one section while crops are growing in others. She produces within her limits all crops indigenous to the temperate zones, and can produce anything that is grown in the tropics.—*Exchange*.

Paris Exposition of 1900.

Major Fred Brackett, of Baltimore, Md., was appointed by President McKinley secretary of the United States Commission to the Paris Exposition of 1900, on August 18th, 1898. At the date of his appointment, Major Brackett occupied the important and responsible position of Chief of the Division of Appointments in the United States Treasury Department. As the secretary of the United States Commission to the Paris Exposition is also the disbursing officer of the Commission, Major Brackett was especially well qualified for this place, as he is an expert in the Government's method of keeping accounts and vouchers for the payment of salaries and contingent expenses amounting to over eight million dollars per annum,

MAJOR FRED BRACKETT, SEC'Y UNITED STATES COMMISSION.

passed through the United States Treasury Division, of which Major Brackett had especial charge.

A high tribute was paid Major Brackett when he resigned from the United States Treasury Department, by Secretary of the Treasury Lyman J. Gage, as the following letter will show:

Washington, D. C., August 18, 1898.

My Dear Sir:

It has not been the usage of this Department to accompany the acceptance of resignations by its servants with official words of appreciation. It may be permitted me to say, however, that in releasing you from the important position as Chief of the Division of Appointments, I appreciate the fact that the Department is losing the services of a faithful, painstaking and intelligent officer.

In your new duties as Secretary to the Paris Exposition Commission, you will find a large and useful field, for which your knowledge and experience peculiarly fit you, and you will carry with you the best wishes of the Secretary and his official associates.

Yours truly,

Mr. Fred Brackett, (signed) Lyman J. Gage.
Washington, D. C.

Major Brackett was also for years Chief of a Division in the War Department. In 1866 he was engaged in the lumber business in Minneapolis. He was afterwards Chief Deputy Collector of the Internal Revenue Department.

Later he was one of the builders of the Northern Pacific Railroad, then land agent for the St. Paul, M. & N. Rail-

way Co., then was Chief Clerk of the United States Treasury department under Secretary Windom, and afterwards Special Agent of the United States Treasury.

During 1891 and 1892 Major Brackett, as Special Commissioner of the World's Columbian Exposition, visited England, France, Spain and Portugal in behalf of the United States Government and the Columbian Exposition. Returning from Europe, Major Brackett was ordered to Chicago and appointed a member of the staff of the Director General of the World's Fair, being in charge of the applications for all foreign exhibits. At the close of the Exposition at Chicago, he was appointed by the Russian Government to take charge of the exportation to Russia of all its exhibits at Chicago. After closing this work, Major Brackett was appointed general manager of a proposed Centennial Exposition in Baltimore, Md., which that city expected to open in 1897. Through the efforts of Major Brackett, the merchants and manufacturers of Baltimore pledged about one million dollars to the enterprise, but the financial depression throughout the country in 1896, caused the directors to abandon the project.

Major Brackett was twice secretary of the Inaugural Committee in Washington, D. C., and safely and successfully conducted the inauguration ceremonies for Presidents Harrison and McKinley. For over sixteen years he has been identified with nearly all the public and National events that have taken place in Washington, D. C.

As Major Brackett has been connected with the practical and detail work of expositions since 1883 by this long and varied experience, he is eminently well fitted to fill the important position he now occupies, of secretary to the United States Commission to the Universal Exposition in Paris in 1900, and President McKinley so recognized this when he selected Major Brackett.

American Post Office at Paris Exposition.

George Beavers, of Brooklyn, has been appointed to take charge of the American post office at the Paris Exposition of 1900. Mr. Beavers is chief of the Division of Salary and Allowances of the Post Office Department at Washington and he will go to Paris as a special commissioner of that department. He will sail for France in February and will at once get ready and place in working order the miniature United States Post Office.

The idea of an American post office at the Paris Exposition comes from Commissioner-General Peck, and he will make it a part of the United States exhibit. This post office will be situated in one of the most centrally located parts of the Paris Exposition grounds, and the inventors and manufacturers of special machinery and labor-saving devices for use in our post office system have been requested to furnish working models of their contrivances for exhibition in Paris.

The department will show the cancelling machines, models of pneumatic mail tubes, mail wagons and other novel and original devices that are used exclusively in the United States postal services. A half-dozen expert clerks from Washington will be sent to Paris and placed in charge of the office. All American visitors who desire can have their mail sent to the Exposition Post Office on the exposition grounds.

A. E. King, who was formerly the New York manager for Matthai, Ingram & Co. has been transferred to Baltimore, Md., taking charge of the branch house of the National Enameling & Stamping Co., in whose New York office he has been since his old company was incorporated with them.

The farmers of the United States own their own farms, as a rule, there being no nobility or great landed proprietors such as are found in some other countries.—*Exchange.*

SEWING MACHINES AND THE HARDWARE TRADE.*--VI

That the Hardware dealer may understand at the outset the stand I am going to take and argue from, I state right here that the sewing machine business is a pleasant and profitable one. We estimate results as we do measures—by comparison. Applying this rule to sewing machines and other lines the former will not suffer.

A good store in a good location and other usual methods of drawing trade, are not to be overlooked, but you must bear in mind that your varied stock is a drawing card, and having attracted a customer to your store, it is yourself that makes the sale—not the surroundings. Your expenses in these directions should be in the way of convenience to you, rather than the making of an impression on customers or the public. Leave that kind of work to the regular sewing machine agent. Your business is to fill wants rather than create them. Your case is to sell goods, and because of your ability to do this you can do away with some of the expense the others require.

As stated in my previous article, handle but one make of machine, but let it be a reputable machine and control it in a well defined territory. If you must carry more than one kind choose those of different construction and talking points. It is not worth while to have several makes that closely resemble each other. To carry a large assortment from which your customers should make a selection is no part of your business. Your ability as a salesman should enable you to fit what you have to the wants as they come up. Handle only machines that carry a substantial guarantee with them. The reason for this is obvious. Every dealer must more or less sustain the good reputation of the machines he sells, and while he may not be permanently interested in the sewing machine business, the machine was mainly sold on his say-so; and it behooves him to see that it gives satisfaction. However, there are so many good machines that he will have little trouble in securing a first-class machine and one that the company will live up to in their guarantee.

I do not believe there could be any set rules for the Hardware dealer in making sales, as no two customers can be approached in the same manner. The dealer must study his customer and know when she is ready to trade and to close the sale when the customer is ready. Many things can be said to salesmen in the way of advice, but I know of no definite plan. After all there is nothing like hard work and plenty of it. This will eventually bring results, while any set plans for selling machines must vary according to the characteristics of your customers and the conditions of your territory.

Hold up the prices on your machines. Don't offer your machines at bargain prices. Don't tell your customers that you are only experimenting in this line and that when you have closed out your samples you will be done with sewing machines. Job lots might be popular in other lines, but they have not yet become so in sewing machines. A fair price allows a man to work and to take time to make the purchaser satisfied. Establish a fair price and sell to all your customers at this price, treating all alike.

While the dealer or merchant who sells sewing machines along with other merchandise need not be a practical sewing machine man, at the same time he will do well to become familiar with his machine. Learn all its advantages over others, for all sewing machines have some advantages peculiar to themselves. Learn all the strong "talking points" in your machine. It is always well to be able

to demonstrate that your machine is a better and more desirable one than the machine handled by your competitor.

For illustration, imagine the dealer making a comparison of the "Blank" with some other. He states to a possible customer: "Both machines, to look at, make a fine appearance; neither having much, if any, advantage. Now, we claim ours has by far the less machinery—the fewer parts and most simplicity—which is quite desirable in any machine. Now we will take off the band and look at the under side. With my machine you see one simple bar, while on the other you find several comparatively heavy and clumsy looking. Both machines may, probably will, sew equally well, but ours, owing to the fewer parts, runs easier and with less vibration. Being free from all mechanical complication, it is more easily cared for, never gets out of order, and is always ready for use. The most inexperienced can readily manage it. Has the latest improvements; uses self-threading cylinder shuttle, and makes the double-thread 'lock stitch.' It is adapted to every variety of sewing, from the lightest muslin to the heaviest cloth, and is warranted for ten years."

It is a great mistake for the Hardware dealer or merchant to have sewing machines standing round, with the idea that they will sell themselves. In these days of strong business competition it is effort and hard work that wins, and while the need of sewing machines exists, like everything else, it has to be aroused, and this can best be done by keeping the machines prominently displayed in the front end of your store and talking up the same whenever occasion offers.

I would suggest to the Hardware dealer and merchant to have some one about his store who is competent to use the machine, "show it up" as well as "talk it up." Such a person could easily be found. Most of the young clerks could qualify themselves for the work in a very short time so as to be able to interest and enthuse the prospective customer. After the Hardware dealer has got fairly started and has disposed of several machines he will find the business easier. People do not feel the need of sewing machines like they do of food or clothing, therefore the need of greater activity. Because of this many merchants imagine that the sewing machine business is overdone. This is a mistake. If he will only look around he will find the crowd everywhere.

The writer has never been an alarming success, but the course as outlined above I have myself pursued, both on the road and in the office with at least a moderate success for many years. A great deal of what I have written embodies facts applicable to employees in all departments, as well as to the merchant dealer.

In conclusion bear in mind that what you do will soon become noised about in your territory. If you are selling a good machine at a popular price and treating your customers fairly and honestly you will have a name and reputation that will bring you trade, and there is no side line that with the same effort put forth in selling, the same amount of money invested, will yield a better per cent. of profit or make you more customers than sewing machines.

G. H. DIRHOLD.

Rockford, Ill

In India, 25,000,000 acres are made fruitful by irrigation. In Egypt there are about 6,000,000 acres, and in Europe, about 5,000,000. The United States has about 4,000,000 acres of irrigated lands.—*Exchange*.

KANSAS RETAIL HARDWARE DEALERS' ASSN.

The annual meeting of the Kansas Retail Hardware Dealers' Association was held in Topeka on January 9-10th, at the Hotel Throop. Representatives were present from all parts of the State, and the meeting was largely attended, and was exceedingly enthusiastic, and the proceedings proved as profitable to the members as they were interesting.

The convention upon being called to order by the president, Frank Rudy, of Paola, he made the annual address, which was of an exceedingly interesting character, giving a resume of the labors connected with the organization of the Association, and what had been done since in order to increase their numbers, concluding with thanking the members present for the co-operation they had afforded him, and expressing the belief that confidence in the importance of the organization was of steady growth, and during the year would result in making many new members.

The address of the president was followed by the report of the secretary-treasurer, J. A. Cole, of Topeka. The secretary's report covering the various labors of the year in connection with his important position we give in full herewith.

This, the first report of the Secretary of the Kansas Retail Hardware Dealers' Association, will be very brief, as our members have given me very little work to do up to date. There have been some complaints made by some of the members that certain wholesale houses were selling goods to their customers or were sending goods into their territory to consumers, and in each case I have corresponded with the wholesale house and they have in every instance treated my letters with the greatest consideration and disclaimed any intention of interfering with the business of the retail Hardware merchant and would thereafter be more careful in sending out goods. I have had but one case where a member definitely claimed damage from the jobber, and in this instance, after a full examination, the jobber allowed the amount of damage asked.

Now it may seem to some of our members that there has been but very little done, this, the first year of our existence, but if they will stop to consider they will see where it leads. "A word to the wise is sufficient," and if a wholesale dealer gets caught sending goods to those who are not legitimate Hardware dealers once, he is more careful the next time, thereby helping all of us.

Soon after our organization on February 13 of last year, and acting upon instructions from the president, I sent out nearly 1000 circulars to dealers through the State, in response to which we obtained an addition to our membership of 36 members. I had also letters from quite a number of dealers who stated that they were heartily in accord with this movement, but as they handled Implements with their Hardware and were members of the Implement Dealers' Association, having some 1000 members in this State, they did not think they were justified in joining this one; but I do not think they quite understood our position, for although we are not many, as yet in numbers, we can depend upon the assistance of every Retail Hardware Dealers' Association in the United States, if we should need it and ask for it.

I have answered a good many inquiries in the past year from dealers who wished to know about our association, but they would invariably decide to wait until this year before joining. I hope they have not changed their minds.

I notice that the Missouri Association is offering an inducement to the travelling men to get their customers to join their association and I think the idea is a good one and worthy of our consideration. We have about 1000 retail Hardware dealers in this State and we ought to have a majority of them on our membership list. At the third meeting of the North Dakota Association the secretary reported nearly 60 per cent. of the dealers in that State as members and that they were right after the other 40 per cent.; but it takes more than the secretary to do this. We

want every member to feel that it is his duty to get other members and to send to the secretary any such matters that occur to them that would be of interest to our association.

There are at present 16 organized retail Hardware dealers' associations in the United States and a movement is being made to form a national association. Our president has received an invitation to a meeting in Chicago on February 12 to perfect the organization.

An Auditing Committee was appointed by the chair consisting of J. H. Foucht, North Topeka; Oscar Rohr and W. E. Culver, Topeka, and E. I. King of Logan.

The Committee on Resolutions consisted of J. H. Hamilton, Arkansas City; R. F. Kelterman, Velits, and D. H. Forbes and W. S. Chaney of Topeka.

An extremely interesting paper was then read by J. F. Berger of Anthony on "Credits in the Retail Business; How to Control Them." This was listened to attentively by the members, and as his observations were the result of experience, those present will undoubtedly profit largely by his address.

This was followed by the reading of a paper prepared by S. J. Gilbert of Arkansas City, on "Advertising," giving the results of his experience in that particular department of the Hardware business, and expressing his belief that judicious advertising in the newspapers is the best method of reaching the people. He explained his methods thoroughly, and in a manner that made it easy for those present to adopt them should they find it desirable. As his nine reasons, which covered in his estimation the best methods of advertising business are of a unique character, we give them below.

Good fresh ads. every few days in the paper.

Keep a neat, clean, up-to-date stock well bought.

Remember that old fashioned handshake.

Keep up the fire and don't forget the ice water.

Have your whole life (except your soul) in your store.

Go to church every Sabbath, and take the family.

Keep plenty of money on hand to cash checks and make change.

Be sure and keep money on hand to pay your bills promptly.

Keep up your dues in the Kansas Retail Hardware Dealers' Association. (I inclose my draft for \$3 for dues for 1900.)

A number of letters were then read and a discussion of their contents then followed. Favorable mention was given to the engaging of traveling salesmen to secure members for the Association. Letters were read from the Retail Hardware Associations of Iowa and Illinois bearing upon the subject of forming a national association, and after deliberating upon this important matter, it was considered of sufficient importance to appoint a committee to select a delegate to attend a meeting that was designed to be held in Chicago to consider the advisability and feasibility of forming a national organization of this character.

In the second session the proceedings were opened by reading a letter of greeting from H. A. Cole, president of the Iowa Hardware Dealers' Association, who was compelled to regret his inability to take the place on the programme that had been assigned to him. Mr. Cole, however, took pleasure in congratulating the Association upon their success, and urged in connection therewith that some action be taken with a view towards the formation of a national association. The following resolutions were adopted:

Resolved, that the Kansas Retail Hardware Dealers' Association request our Senators and Congressmen to use their influence and votes against all trusts and combinations.

Resolved, That we are opposed to the trusts and combinations of the present day, and will, as far as possible, deal in goods manufactured outside of them.

Among other matters that of mutual insurance was brought before the convention and very favorably considered, being referred to a committee for further elaboration in a subsequent report. It was the recommendation of the executive committee that the next annual meeting of the Association be called to convene at Kansas City, Kansas, and the date decided upon to be two days previous to the convention of the Implement Dealers' Association. The election of officers for the ensuing year which followed, resulted as follows:

Frank Rudy, Paola, president.

George F. Anderson, St. Marys, vice president.

J. A. Cole, Topeka, secretary-treasurer.

EXECUTIVE COMMITTEE.

James H. Hamilton, Arkansas City.

W. S. Chaney, Topeka.

E. I. King, Logan.

J. F. Berger, Anthony.

Miles Boyle, Garnett.

The Illinois Retail Hardware Dealers Association.

The second annual meeting of the Illinois Retail Hardware Dealers Association will be held in Peoria, February 27th and 28th. The secretary has just sent out to the retail Hardware merchants of the State a circular letter asking them to join the Association and be present at the next annual meeting. The letter was an excellent one prepared by President Miller, going into details as far as possible, so as to outline the objects of organization from the retailer's point of view, and giving a list of subjects that will be taken up and discussed at the coming meeting. The letter is of an executive character that prevents its being published in full in the trade journals, but one of considerable interest; so much so that the mails are bringing in a number of signed applications which accompanied the letter, and also many inquiries regarding more definite information about the Association and its methods. There is every reason to anticipate that the attendance will be extremely large on the opening day, and this second meeting be a greater success than was previously anticipated. The Peoria merchants are perfecting their plans for entertaining the visiting dealers when they come, and an enjoyable time can be assured for all of them. At a meeting of the Peoria Association, which was held on January 17th, it was decided to give a banquet to the visitors on one evening while they are there, and also some amusement for such time as the Association may not be in executive session. The headquarters of the visiting members in Peoria will be the Fey Hotel, as a rate has been made that is considered satisfactory by the Illinois Association by making a reduction on their regular charges for rooms according to location.

The meetings will be held in a hall within a square from the hotel, making the selection of this hotel extremely advantageous in this particular. The programme for the coming meeting has not as yet been perfected, but every assurance is given that many matters of interest will be brought before it, and inducements offered that every legitimate Hardware merchant in the State should be in attendance. The Western Passenger Association, it may be stated, has arranged for the low rate of one and one-third fares for the round trip, for the delegates attending this Convention, and this alone should prove an inducement for the hesitating retailer to be present. The secretary's address is L. M. Reeves, Peoria, and all matters connected with the meeting may be received from him upon request.

The Ohio Hardware Association.

The annual meeting of the Ohio Hardware Association will take place in Cleveland, February 28th and March 1st and 2d. The headquarters will be at the Colonial Hotel. The following circular has been mailed to every Hardware merchant in the State, and as the Ohio Hardware Association has now a membership of nearly 300, the probabilities are that this encouraging number will be largely added to in season to be present at the annual meeting.

The Ohio Hardware Association was organized in 1894, and has now a membership of nearly three hundred.

By referring to the Directory, which is enclosed, it will be noted that the names of those who are members of the Association are indicated by an asterisk (*), and it will be seen that the list comprises the active and progressive dealers of the State.

The benefits that result from an organization like this are manifold: The discussion of trade topics, friendly intercourse between its members, interchange of ideas, enlarged acquaintance, and the many opportunities to assist in remedying the evils that are ever threatening the legitimate trade, are some of the results of our annual sessions; hence our members now look forward with more than ordinary interest to our next annual convention, which is to be held at Cleveland, February 28th, 1900.

Arrangements are now being perfected for this meeting, of which you will be advised later.

We extend to you a cordial invitation to join us, if you are not now a member, and will be pleased to have your application for membership, the annual dues being only \$3 00.

Respectfully,

H. C. WISEMAN, President,
Springfield, Ohio.

JOHN F. BAKER, Sec'y and Treas.,
Dayton, Ohio.

Wisconsin Retail Hardware Association.

The official programme for the fourth annual meeting of the Wisconsin Retail Hardware Association has just been issued. It will take place at the Republican House, Milwaukee, on February 7-8. The programme is included in a very handsome pamphlet made up of forty pages, and is sent out to the Hardware trade in a large manila envelope. In the left-hand corner on the address side is placed the notice: "Don't forget February 7th and 8th." Included in the programme of the convention are given the portraits of the eight officers of the Association; also a reference to its object, the constitution and by-laws and resolutions of the Northwestern Retail Hardware Association. In addition to this is a list of some of the Hardware associations of the country. The programme besides supplies an important list of the membership of the Wisconsin organization, which numbers now nearly 300 and is scattered over at least 150 towns throughout the State.

The annual convention will commence with the meeting of the executive committee on Wednesday, February 7, at 11 A M. In the afternoon a general meeting will be held, at which addresses will be made by President Montgomery, Vice President Sheldon and ex-President Hughes, reports will be read by Secretary Peck and Treasurer Schlegelmilch and papers will be presented by a number of members, including C. Krembs of Stevens Point. On Thursday, after some routine business, the morning session will be devoted to "Talks on Insurance," reading a paper by R. H. Suettinger, entitled "Doing a Cash Business," and opening the question box discussion. The afternoon session will be an open one and a reception will be given to jobbers and manufacturers present, who will severally be invited to address the meeting. Papers will be read by John Hughes and R. L. McNamara, after which there will be a further discussion of the contents of the question box. A feature of this session will be the appointment of a committee to confer or correspond with the Iowa and Illinois associations concerning their union with the Northwestern Association, which now comprises the States of Wisconsin, Minnesota and North Dakota.

NEW GOODS AND SPECIALTIES.

Acetylene Gas for Vehicles.

The Plume & Atwood Mfg. Co., New York and Chicago, have just patented a new Acetylene Gas Generator for use on carriages and other vehicles of this description. These generators are constructed in a form exceedingly compact (Fig. 1), are absolutely self-controlled and can readily be attached to any existing form of carriage lamp. (Fig. 2.) They give a steady white light, and do not smoke or tarnish the reflectors. They are especially designed to fill the present want for a positively reliable carriage light generator; one that can be depended upon under all possible conditions. The illustration given herewith represents the "Banner" No. 1, which is designed by the manufacturers for light private carriages, runabouts, etc. The larger generator is made under the same name, No. 2, and is designed

FIG. 1.

FIG. 2.

for coaches, cabs and larger vehicles. The No. 1 burns a continuous even white light for four hours, but the larger one can be depended upon to run for eight hours. Both are strongly built of brass and finished in black enamel, with nickel trimmings. Either one of these generators can be supplied in full nickel plate, or in plain polished brass, just as desired. These generators are automatic in their action, require no attention after lighting, and if occasion requires, can be charged or emptied in one minute's time.

The "Security" Coaster Cyclometer.

Since the world began mankind has ever been striving to get something for nothing. The wheelmen as a class are no exception and hence any device which performs a part of their labor or, at least, makes labor unnecessary, is welcomed by all. Hence the popularity of the New Departure Coaster Hub which removes at least half the labor of cycling, and now comes, from the same source, a little instrument for telling the exact amount of labor saved with-

out the necessity on his or her part for "ciphering it out." The New Departure Security Coaster Cyclometer is the latest acquisition and a most valuable instrument it is bound to be as it gives the rider "something for nothing" in keeping tabs upon him while he is coasting and telling him at a glance the exact distance which has been covered without work. When pedaling the cyclometer takes no

notice and keeps no record, but the instant the feet are held still the little monitor is alert and full of business, keeping an exact and truthful record of the distance coasted. Many devices have been invented for measuring man's work but it is seldom that one is offered for keeping account of effort saved. In its conception the idea is novel and in creation unique and attractive. The New Departure Coaster Hub and Cyclometer will be heard from with no uncertain sound during the coming season, all the signs of which point to the universal adaption of coaster devices, and as the New Departure is adapted alike to chain and chainless wheels its field is large and its influence for good cannot be overestimated. The device will be marketed by John H. Graham & Co., No. 113 Chambers Street, New York City, the general selling agents for the New Departure Bell Co.

Federal Rod Cutter.

Chandler & Farquhar, No. 36 Federal street, Boston, Mass., are placing before the Hardware trade the Federal Wire Cutter, an illustration of which we give herewith. This is a very useful appliance for the purpose, and is marketed at a very low price. As will be noted in the illustration, the holes for cutting wire are drilled at a small angle so that when the pressure is on the wire to be cut the wire will stand at right angles to the cutter plates, so as to leave the ends true and square. The upright slots in

the cutter plate are for cutting flat metal or round wire when the ends cannot be put through the holes. The gauge to limit the length of the wire to be cut moves out of the way so that the wire after being cut can be easily removed from the hole. If the cutter is held in a vise at an angle of 45 degrees, the wire after being cut will drop

out of itself. The point is made that the cutter plates not being inclosed in a frame will cut off a very short wire to gauge; also that the cutter plates can be readily removed for sharpening by simply taking off the adjusting and check nuts. The cutters can be adjusted as they wear so as to bear firmly against one another by the adjusting and check nuts on the end of the eccentric shaft, as the motion of the lever with cutter plates is positive and carries the cutting plates back to their first position. The tool is a simple one for cutting wire and is made to be readily held in a vise or secured to a table or bench. The manufacturers quote these rod cutters as follows: No. 1, cutting $\frac{1}{8}$ inch to 0, each \$3.00; No. 2, cutting $\frac{1}{4}$ to 0, each \$5.00.

Separable Flower Pot Stand's

The Gilbert & Bennett Mfg. Co., New York, Chicago and Georgetown, Conn., among the number of extremely useful specialties that they have added to their general line for this season, have been selling the G. & B Separable Flower Pot Stands, an illustration of which we give herewith. They are made in a number of styles, but the one shown will convey a very fair idea of their utility. The frames of these stands are constructed of steel, T-shaped, which method assures the greatest strength in all parts, and is a form especially adaptable for securing the shelves and braces with appropriate clamps. Malleable iron clamps for the purpose are provided to connect the parts quickly, and enable them to be secured in first-class shape. The scrolls shown in the illustration are made of heavy steel wire, which is formed in a manner that permits the upper margin to be securely clinched to the heavy steel rod that forms the upper margin. The scrolls do not project outward, so they are never bent out of place, and no small wires are necessary in their use. The stand is consequently very durable and very strong. It is simple in its construction and pleasing in appearance.

Before being marketed, these stands are thoroughly coated with enamel green paint, and further ornamented with gold bronze in an artistic manner. Another feature connected with the stands is the fact that they can be shipped in boxes with all the parts detached. Taking up very little room for this method of shipment, the freight item is comparatively small. Further information and prices of these desirable goods will be furnished by the manufacturers on application.

Bicycle Grindstones.

S. D. Kimbark, Michigan Avenue & Lake Street, Chicago, Ill., is agent for the sale of the Bicycle Grindstone which we illustrate herewith. This is a new feature in the way of grindstones, and one that seems to meet the approval of the trade. Mechanics having tools to sharpen or small work to grind will be interested in the new features

connected with this grindstone. It is provided with ball bearings on the shaft and cranks, which have a tendency to make its operation extremely light and even. The stone is about 22x2 inches, and is of fine quality, every one of which is warranted to run perfectly true. The frame is of hard wood; thoroughly bolted together, and it is marketed at a price that is extremely moderate. Any further details may be obtained by writing the manufacturer, who will respond promptly.

Rapid-Easy Garden and Field Weeder.

The W. J. Clark Co., Salem, Ohio, are placing upon the market the Rapid-Easy garden and field weeder here illustrated, which gives every appearance of being a salable novelty. The blade is eight inches long and two inches wide. It is manufactured of fine shovel steel, is zig zag in shape, and has a double edge, so that it will cut either coming or going. The edges are beveled on top like those of mowing machine knives. The up-turned ends of the blades are two inches in height, and are likewise two-edged, the edges possessing an inside bevel. To the top of the up turned ends of the blade two ends of a bifurcated malleable iron socket for receiving a wooden handle is riveted. The handle is made from hard wood, and is five feet in length. Among the numerous advantages that are mentioned in connection with the Rapid-Easy Weeder are,

that it will easily slip through the ground in either direction, cutting off all the weeds that are close to the surface, or at any desired depth. It can be run close to a row of plants without mutilating them, as the prongs of the socket act in the nature of fenders, while the up-turned ends of the blade serve also as guides, and cut very close to the plants. For export this device is packed in boxes of twelve dozen, measuring 6x2x4 feet, and weighing 486 pounds.

RECENT TRADE PUBLICATIONS.

NEW DEPARTURE BELL CO., Bristol, Conn.; John H. Graham & Co., No. 113 Chambers Street, New York, general selling agents. Envelope size catalogue of 40 pages, covering their line of New Departure bicycle sundries, which for the season of 1900 has been greatly extended, new styles having been added, several improvements of old styles and a variety of new departures in other ways that make this an extremely important catalogue for this line of goods. It is handsomely printed on good paper in two colors which bring out all the novel features in a very attractive manner. Included in its contents in addition to the bicycle bells, to which it is largely devoted, will be found the New Departure automatic coaster hub, bicycle controller and a variety of sundries in the shape of cyclo-meters, pumps, cycle guards, acetylene lamps, etc., etc. This catalogue has a telegraphic code at the end covering several pages, by which the entire line may be ordered readily without great expense or loss of time. This catalogue is published not only in English, but also in the French and German languages, all of the work pertaining to which being done in the advertising department of this company. This is a very novel feature that we do not remember of having been made prominent by any other manufacturer of a line of goods which finds a market in every part of the world. The company deserves credit for increasing the importance of its product by making its catalogue valuable wherever the English, French or German language is spoken.

E. C. ATKINS & Co., Indianapolis, Ind. Pamphlet catalogue of 156 pages, well printed on excellent paper, fully illustrated throughout, covering their entire line of saws, saw tools and mill specialties, embracing in its contents circular saws, with and without inserted teeth; band saws, veneering saws, gang, mill and cross-cut saws in great variety and of every description; wood saw blades, saw tools and saw sets, hand, panel, rip, pruning, butcher and back saws of every possible variety. Included in the contents are shown a line of specialties represented in slaw and kraut cutters, speed indicators, swages, gummers, mill dogs, etc., etc. This is one of the most important catalogues ever issued by this company, and reflects great credit upon its compiler, as he has endeavored to give every possible point of information which such a catalogue should include in its pages. It is neatly and attractively bound with ornamental cover and should be in the possession of every Hardwareman handling this line of goods.

FRANK STURGES, Chicago, Ill. Pamphlet catalogue of thirty-two pages covering milk cans and dairy tinware. This catalogue is gotten up in a very artistic manner, with fine illustrations on every page, printed on excellent paper in two colors, and a full description with list prices of all the goods is given throughout. The manufacturer states that his line of goods he has been studying carefully for many years, and is gratified to know that his efforts are appreciated by the users of these goods, having a corps of experts constantly working on new improvements. He is only too glad to hear from dairymen who may have suggestions regarding some possible improvement, which he would like to entertain at any time. A Hardware dealer to whom dairy supplies form an important part of his stock would do well to secure this catalogue, as it is complete in every particular, and represents a class of goods that are well worthy of support.

NOVELTY MFG. CO., Jackson, Mich. Thirty-two page pamphlet covering their line of oil stoves for cooking and heating and giving all the necessary equipment for the same. This represents a line of Wick Blue-Flame stoves for cooking purposes that they have been manufacturing for a long time. They are excellently illustrated on good paper, with full descriptions, and the line, judging from the prices, style and general equipment, should be a popular one for any Hardware house to handle. They are made in a number of varieties and sizes, running from one hole to three, and under various names. Their aluminum oil heaters, which have been advertised largely in our columns, are shown in the several varieties in which they are made. The catalogue includes a telegraphic code, by which every facility is afforded for quick ordering at limited expense through this means.

NATIONAL SHEAR CO., Newark, N. J. Catalogue and price-list of the Wm. Shollhorn Co. "Star" brand shears, scissors and tinners' snips, which department is controlled by this company. This revised catalogue covers an extensive line manufactured under this brand, the excellence of which has long been known by the Hardware trade, representing as it does a line of finely finished goods of superior quality, modern styles and shapes, and including in its assortment bankers' and paper shears, barbers' shears, dental snips, pruning trimmers and shears and tinners' snips in all varieties known to the trade.

GOULDS MFG. CO., Seneca Falls, N. Y. Pamphlet catalogue of 40 pages entitled, "How and When to Spray and What Pumps to Use." This is issued in the interest of one line of goods of their production, that of spray pumps and nozzles for every service. It is illustrated throughout by showing the various appliances that are now in use for this purpose and manufactured by this company, including several styles of knapsack pumps, spray pumps with cylinders and large size sprayers for spraying kerosene and water for agricultural purposes, making quite a special industry of this one department.

THE GILBERT & BENNETT MFG. CO., New York, Chicago; and Georgetown, Conn. Catalogue of separable flower pot stands. Among our new goods and specialties in this issue will be found an illustration of these goods with appropriate description, and in this catalogue, which is of envelope size and of 16 pages, are given illustrations in variety of the various styles manufactured by this firm, showing in detail besides, the method of securing the brace rods and frames in order to give them the necessary rigidity to increase their utility.

YOUNGSTOWN SPECIALTY MFG. CO., Youngstown, Ohio. Envelope advertising card of four pages, the first of which shows in a circle, cut from the card, an illustration in color of their syrup cans, with the inscription, "This Is Worth Looking Into." On opening the card a further description of these goods is given, and altogether it is an attractive advertising novelty.

AMERICAN BICYCLE CO., Pope Sales Department, Hartford, Conn. Pamphlet catalogue sixteen pages covering the line of Columbia and Hartford bicycles for 1900. It is very artistically gotten up, with fine half tone illustrations, showing the different methods and full description of all the improvements to be found in the Columbia bicycles for the current year.

O. W. BULLOCK & Co., Springfield, Mass. Pamphlet catalogue of 60 pages, covering a line of specialties and improved mechanics' tools such as is rarely found in any other catalogue within our observation. In great variety, well illustrated and nicely printed, are given the following: Solid steel chucks, bench stops, chamferer gauges, saw and nail sets, drive and prick punches, screw drivers in great variety and of every possible style and kind, including gun screw drivers, rubber-topped screw drivers and electricians' revolving head; scratch and saddlers' awls; tracing wheels of every description, with single and double wheel; tack claws and pullers and can openers. Included in the assortment will be found a number of lines in use by manufacturers of higher grade goods, such as opticians' pliers, machinists' tracers and steel point markers, thread gauges, tweezers for electricians and others. The catalogue also includes a variety of handles for most of those tools that require them that is rarely classed among the specialties in a catalogue. This is a very desirable catalogue to add to the Hardwareman's library.

CHISHOLM & MOORE MFG. CO., Cleveland, Ohio. Pamphlet catalogue of 24 pages, covering their line of steel door hangers and rail, elevator door hangers and locks, baggage car door hangers, American Standard rail joints, malleable iron castings, pneumatic riveting machines and pneumatic and hand power chain hoists, cranes and pulleys. This important line of goods is fully illustrated throughout, showing in a graphic manner the various articles and the uses to which they may be applied. This is an important line of specialties and one worthy of the consideration of dealers, who desire information of any kind to which these specialties are applicable.

STORM MFG. CO., Newark, N. J., have added to the list of pictorial embellishments that have been popular for some time of a yard of this or a yard of that, a "yard of old advertisements," in which a number of the electrotypes that they have made noticeable in the columns of various publications are all shown in this form. The natural inference is that any one of these can be obtained by their customers on application for local advertising purposes, and to present the information in this form makes it sufficiently noticeable to be availed of beyond a doubt.

Advertisers' Corner.

If you run a series of display ads and are at a loss for new copy, try a change of form with the same wording. It is an escape from repetition and a good makeshift in time of stress.—*Exchange*.

An advertiser may buy a whole page, fill it with rot, and get less returns from his investment than the advertiser on the next page gets from an inch announcement.—*Advertising World*.

Correspondent—I should like to write for your paper. You want the manuscript sheet blank on one side, don't you?

Managing Editor—On both sides, if you please.—*Fliegende Blätter*.

The trouble with almost all rhyming ads is that they don't rhyme and they don't ad. Once in a while you stumble across one that is bad enough to be good because it is ludicrous, but ordinarily they are simply just plain bad.—*Bates*.

Irate Customer—See here, young man, I bought this hair tonic from you, and it is absolutely worthless.

Clerk—We can't help that, sir.

Irate Customer—But you guaranteed each bottle?

Clerk—Exactly, sir, but we didn't guarantee the tonic.—*Chicago News*.

The way to make money in business is invariably to have the best article of its special kind in the market; not merely as good as some others, but better. There is always a public ready to pay a fair price for the best of anything. Never key a price too high, but on the other hand never key it too low. A reasonable profit is every man's right in business. Small profits are of consequence only when an immense business is done. But with the best article of its kind, what may be termed "a profitable profit" is always possible.—*Ladies' Home Journal*.

A motto I saw not long ago read, "We never try to sell goods you do not want." Many merchants make the mistake of having their clerks force goods upon customers, whether the customer really wants the goods or not, and whether the goods are really satisfactory or not. I have seen customers take goods they did not want and the clerk knew it, and the probability is the proprietor also knew it. The clerk or the proprietor was more persistent than the customer, and they forced the customer to buy. I do not believe it ever pays to force a customer to take things he does not want.—*Merchants' Journal*.

The headline should be a part of the ad and should not be dragged in by the hair. If you can't think of a few striking words with which to begin the first sentence of your ad, begin it with any words that come to your mind. Jump right in and write the ad. Think of the headline afterward. The headline doesn't amount to a great deal anyway; it is what you really say in the ad that tells. Of course, a good headline is a good thing. The more striking it is the better, but a headline is merely for the purpose of drawing attention to the ad, and the principal thought should be given to the ad itself.—*New England Grocer*.

One little drop of rain does not produce much moisture; even two or three, or half a dozen, have little effect. But the constant, continual dripping of the rain drop will thoroughly moisten the earth. Just so with advertising. One little skinny advertisement should not be expected to produce very material results in this age of the world, when so much advertising is being done; but persistently keeping at it, if you have something meritorious, scarcely ever fails. Others have, perhaps, been advertising something similar to yours, long before your advertisement appeared, and people may be using that with satisfaction. Do you expect one little announcement of yours is sufficient to make them change? But if your advertisement is placed before them time after time, they will conclude your article has merit, and may be induced to try it, to see if it might not suit them better than the one they are buying.—*Shoe & Leather Gazette*.

Most retail advertisers have an exaggerated idea of the value of schemes. This is a result of the widespread opinion that results depend on unique methods, that good advertising must create a stir and excite universal comment. The same amount of effort expended in straightforward, legitimate presentation of the merits of their goods or methods would produce far better results. Advertising that causes comment is good advertising if the comment is of the right sort, but advertising that directly sells goods is the kind to use. If you watch the methods of the highly successful advertisers you will find that the only magnets used to draw trade are the attractions presented by the goods offered. Customers who come to you believing they have some substantial reason for coming are the only kind worth having. This sort of custom can only be secured by conducting a worthy business and by letting people know the facts about it in a sensible manner.—*American Druggist*.

REVIEW OF THE MARKETS.

Hardware: Business opens up in a very satisfactory manner, with every indication of an increasing volume as the weeks pass by. Travelers' reports are of the most favorable character, less hesitancy being manifested by dealers in ordering stocks than was the case a year ago at prices far lower than are to-day obtainable. Demand in some lines is exceptionally good, and a possible shortage is feared resulting from an excess of orders on leading goods for Spring trade.

Wire Nails: The transactions in this staple since the announcement of the last advance, have not been of phenomenal importance. The impression held by the trade implies it was an advance not called for by the increased value of raw material, or the conditions of the market. The natural result is, the American Steel & Wire Co. are increasing the amount of their reserve stock, and wire nails are no doubt largely represented in the 250,000 tons of their goods which they told the "Rod mill" strikers they had already heaped up in stock. They anticipate no great demand for domestic wants before February. Present prices are well sustained, and are represented by the following, f. o. b. Pittsburgh; terms, 30 days, 1 per cent. off in ten days:

To jobbers in carload lots.....	\$3.20
To " " in less than carload lots.....	3.22½
To retailers in carload lots.....	3.35
To " " in less than carload lots.....	3.45

New York quotations may be stated as follows:

To retailers, carload lots on dock.....	\$3.53
" " less than carloads on dock.....	\$3.66
Small lots from store.....	\$3.50 to 3.75

Cut Nails.—No great activity is manifested in the cut nail market and sales are not especially large, even at the present moderate scale of prices, in comparison with wire nails. Manufacturers' quotations are announced as follows, f. o. b. Pittsburgh; terms, 30 days, 1 per cent. off in ten days:

To jobbers in carload lots.....	\$2.50
" " in less than carload lots.....	2.55
To retailers " ".....	2.65

New York prices may be quoted as follows, with business but nominal:

To jobbers in carloads on dock.....	\$2.68
" " in less than carloads on dock.....	2.76
To retailers " ".....	2.86
Small lots from store.....	\$2.85 to 2.90

Barb Wire: The present admittedly high prices on barb wire do not stimulate extensive sales of this important staple. All reports concur in the belief that the farmers as a whole will await lower prices before purchasing the Spring supply they thought last summer would be found desirable after January 1. The market is firm, however, and quotations are as follows, f. o. b. Pittsburgh, net cash, or 1 per cent. off in ten days:

To jobbers in carload lots, Painted.....	\$3.65
" " Galvanized.....	3.80
" " in less than carload lots, Painted.....	3.67½
" " Galvanized.....	3.82½
To retailers in carload lots, Painted.....	3.80
" " Galvanized.....	3.80
" " in less than carload lots, Painted.....	3.95
" " Galvanized.....	3.90
" " in less than carload lots, Painted.....	4.05
" " Galvanized.....	4.05

Smooth Wire: The buyers to whom Smooth Wire is the raw material of their line of manufactures are placing a number of orders for immediate wants. The market prices are well sustained with quotations as follows, f. o. b. Pittsburgh, terms thirty days, or 1 per cent. off in ten days:

To jobbers in carload lots.....	\$3.05
To " " in less than carload lots.....	3.07½
To retailers in carload lots.....	3.20
To " " in less than carload lots.....	3.30

The charge for galvanizing is 50 cents on sizes from 6 to 14 inclusive; on Nos. 15 and 16, 85 cents, and on Nos. 17 and 18, \$1.10.

Drop Shot: Under date of January 22d, the following advanced prices were announced for Drop and Chilled Shot:

Drop shot sizes smaller than B, 2½ lb. bags, \$1.50 per bag; 5 lb. bags, 35c per bag.	
Drop shot, B and larger sizes.....	" " 1.75 " " 40c. "
Buck shot.....	" " 1.75 " " 40c. "
Chilled shot.....	" " 1.75 " " 40c. "
Dust shot.....	" " 2.10 " " 50c. "

Terms: Net cash 30 days, or 1 per cent. discount will be allowed for cash remitted within 10 days.

Henry Disston & Sons, Inc., Philadelphia, Pa. Under date of January 1, 1900, a new discount sheet was adopted applying to their catalogue of January, 1899, all former quotations being cancelled, and special discounts remaining as heretofore:

Linseed Oil: Dean Linseed Oil Co., under date of January 10th, quote as follows:

In lots of less than 5 barrels 54 cents per gallon.
In lots of 5 barrels or more 53 cents per gallon.
The five-barrel price only applies to deliveries of that quantity at one time.
Boiled linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil, 65 cents per gallon.

THE BALTIMORE TRADE.

We daily meet with retailers who advise us they are at present afraid to purchase goods, having no confidence in the stability of the market and are daily visited by manufacturers or their representatives who assure us there is no possibility of a decline for many months, yet a number of the latter report recent advances in their respective lines, but will take orders for immediate shipments, of good size, at prices which might suggest, on their part, a desire to unload. There are also a few jobbers, and old men in the Hardware trade, who take a special delight in cutting the prices of leading goods, such as axes, nails, etc., and will not enter into agreement to maintain profitable prices thereon; perhaps they cannot stand so much prosperity which has been sweeping the country and into the pockets mostly of the manufacturers.

Of course, there are always disturbing elements to affect, more or less, the peaceful conduct of business, but a time is close at hand when a fellow should know how he stands on the merchandise standard as well as on that of gold and silver with imperialism thrown in.

At present we have a valuable stock of goods, well assorted and paid for, which we propose to sell for as much money as possible, and as a special inducement, give to each cash purchaser of \$5 worth or more, a desirable souvenir.

January sales so far are very satisfactory and collections as usual the first of the year a little slow.

H. W. WEBB & SONS.

THE PITTSBURGH TRADE.

January trade is good; salesmen are sending in liberal orders and collections are fairly good.

A pleasant feature of closing the books for the past year was the small number of accounts to be charged off to loss account, quite a change from the preceding years.

We are pleased to note that there is a growing disposition on the part of manufacturers to accede to the request of the jobbers for a restoration of the 2 per cent. 10 days cash discount. The jobbers have never changed their selling terms from 60 days or 2 per cent. 10 days, and the loss of the cash discount during the past six months has been a serious matter to them.

LOGAN-GREGG HARDWARE CO.

THE BIRMINGHAM TRADE.

The business starts off well for the first month in the new year and we feel encouraged to think it will hold out well. It is still difficult to obtain goods promptly and the demand is active. The year 1899 broke all records for volume of business and we were inclined to think that subsequent years would not come up to it, but 1900 starts out with many goods much higher, so that the same quantities will greatly increase the volume of trade, and we now would not be surprised if 1900 should make a record from which to compare subsequent years. We will be glad when all old contracts are completed, when we will be better able to see the steadiness of the market and see if the consumption will continue under the higher level of prices.

We note the railroads have changed the classification on many lines of Hardware and propose in this way to get a good share of the prosperity while it lasts. This will increase the cost of many lines at the distributing points in the South where the rates seem already high enough. We desire to see all lines of business have a fair profit for their labor, but desire that it should not go beyond what is fair to all concerned. MOORE & HANDLEY HARDWARE CO.

THE CLEVELAND TRADE.

Now 1899 is closed. It has been an eventful year. The country and its business have both been prosperous. The immense gains has suggested the danger of over-wealth and its corrupting influence. The discussion of this indicates that the moral sentiment is not dormant, for it is that that gives voice and cries out against danger. Unless religious convictions are smothered the sense of brotherhood will increase. The next century is likely to show munificent evidence of the influence of ethics on the character of business men, and if this be so it will prove that richness and wickedness are not necessarily the same. We shall know more of the effect of consolidations and combinations at the end of 1900, and probably "God will still reign and the Government at Washington still live."

The habit of Wall Street calling on the Government to aid them by furnishing money indicates an unhealthy dependence on paternalism. The necessity for this is evidence of our imperfect financial system. The Government should go out of the banking business. So long as they can control the amount of money in circulation the opportunity for speculation by officials will remain. The Secretary of the Treasury can control the prices of stock at his will, and it is a temptation altogether too great to be continued. Millions can be made any week. It is an honor to human nature if it is not being done.

The outcry against the banks is perfectly senseless. So long as they are compelled to secure the public against loss on their issues every impediment in the way of their issuing circulation should be removed. They should be encouraged to furnish all the money the business of the country needs. The surplus not needed in the national treasury should be deposited in the banks who bid the most for its use, giving United States bonds as security. The opportunity to bid for the use of this money should be open to all the banks, and the amount to be retained in the treasury should be provided by law and the secretary compelled to deposit the balance in the banks designated. This would make the secretary an executive officer and the country would save from the enormous strain caused by waiting to know what his action was to be.

Business is often seriously affected by strikes and lock-outs, and some modification of the present conception of property rights is necessary before legislation can be obtained to prevent them. If it is necessary to interfere with somebody's business to prevent nuisances it is an admitted right to do so, and street-car strikes are certainly a first-class nuisance.

Corporate and individual rights should be held subject to the rights of the people. The means of transportation should not be subject to impairment by the quarrels of corporations, associations or individuals. Compulsory arbitration laws can and should prevent this. Stockholders, laborers and the public will be benefited and the expenses and inconveniences be avoided by the eviction of willfulness from controversies. The State should furnish arbitrators and compel obedience to their decisions to save willful sacrifice and public annoyance.

New Zealand has demonstrated that this is practical, giving the business world an example of the greatest value. Demagogue resolutions for political capital will not answer the purpose; what is needed is practical legislation. The introduction and passage of such a measure will secure for its author the gratitude of all classes.

Business continues good. No material decline appears and many manufacturers are making advances to cover the increased cost in material. There is in business circles the usual nervousness that exists during Congressional sessions lest the people behind the guns may suffer more than the evil fired at. The uncertainty in Presidential elections usually injures business, and when it ends in tri-

umph of business principles, and Congress meets, we are still in peril from the vagaries of incipient statesmen.

Invoices are being made at present value with deductions of such percentage at the foot of the invoice as may be thought necessary to cover possible declines.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE OMAHA TRADE.

The closing year of the nineteenth century or the opening one of the twentieth century, whichever may suit your own taste or that of your readers, opens with all indications of an increased flow of business prosperity, and while it is a little early yet to anticipate results, it looks as though there was no possibility of any slackening in either prices or general demand for the first half of the year. What the last half will bring forth depends to a very large extent on conditions now impossible to forecast.

In many lines of goods the present values undoubtedly curtail demand to a very material extent and a glance through warehouses, which a year or two ago were filled and emptied every thirty days and in which now the same stock will lay for weeks and months at a time, is the best evidence that can be offered that these conditions exist, while what falls short in one line is made up in others, so that the average is not only fully maintained but considerably increased.

Travellers have hardly yet been in position to familiarize themselves with the conditions existing in the new year and yet the volume of mail business during the holidays and up to the present time has been largely in excess of anything heretofore experienced, 1892 and 1893 not excepted.

It is to be hoped that those who are in control of prices will appreciate, like the boy who climbed the hill, that the farther up he went the longer slide he had before him, and unless some kind friend fixes a soft dumping place for us at the bottom, some of us are apt to come to grief. An unusually mild winter prevailing throughout this section has perhaps, to an extent, diminished the sale of seasonable goods and in the line of clothing, rubber goods, boots and shoes and heavy dry goods, some serious complaint is made of large stocks in the hands of country merchants and fewer sort-up orders. At the same time, this improves the demand for some lines of Hardware and no complaints can be made in regard to either collections or trade.

RECTOR & WILHELMY CO.

THE COLUMBUS TRADE.

We failed to send you a letter for your last issue because we were in the midst of our inventory and could not think of allowing any outside matters to interfere. As we usually spend about fifteen minutes on the trade reports we send you, you will see that we could not spare the time. The writer's time was occupied one solid week with our salesmen, and every Hardware jobber knows that a task of that kind is enough to drive a man "to bed." You may send your change sheets every week regularly, but when you come to comparing the different salesmen's price-books, you will find a great many errors on miscellaneous goods. Some one has neglected to make changes as they received them and the only way to be sure you are right is to go through the catalogue from cover to cover, on every item, and it will keep salesmen busy for some time to revise prices that were good January 1st, but not good now. Manufacturers made numerous changes the first of the year that were not announced for several days. Hammond's hatchets and Atkins' saws have advanced. New list on tire bolts and several other articles, so it will make it necessary to go over a good share of the work again. Some few goods are lower in price. Among them copper and brass wire and galvanized iron ware, but most changes are an advance. Trade is starting out very satisfactory and our salesmen are sending us good orders daily, both for prompt and future shipments. There is not much doubt

but what there will be a shortage on a great many goods this year, and dealers are trying to get goods in stock early so they will not be short when consumers want them. Wire and nails are not bought by the car-load as they were last year, and we think the majority of retailers will be better off by buying such goods in reasonable quantities as their trade demands. It was not an easy matter for a great many dealers to pay for a car of wire and nails last year promptly, and would be still harder this year. Jobbers cannot afford to extend time on such goods now, as they must pay for wire and nails and many other goods within 30 days. Most of them still give 60 days, which is 30 days more than they get and is all they can stand. It is our opinion that a great many small dealers buy in too large quantities. A great many must sell the stock and get their pay for it before they can meet their bill from the jobber or manufacturer. If they do not sell the goods and get the money within 60 days, somebody has to wait. It looks very much as though the American Steel & Wire Co. were going to have trouble with their workmen. It is to be hoped that the trouble will not be serious, as the demand for wire and nails will soon be increased. We feel certain that the demand for wire will be much less than last year. Farmers will not buy it if they can get along by patching up old fences, and we fear many a corn-field will be raided this summer by the cow with the crumpled horns. Wire is too high, and we hope the American Steel & Wire Co. will have more money than they know what to do with very soon and reduce it to a reasonable price.

THE SMITH BROS. HARDWARE CO.

THE ST. PAUL TRADE.

The dealer in Hardware, either in a wholesale or retail way, who is not satisfied with his business for the year 1899 would be a curiosity to behold. We have not yet met with that individual nor heard of his existence. The calamity howler, if he ever had a place among the Hardware dealers, has evidently had his mouth closed for his voice is not now heard. The outlook into the year 1900 so far is bright and cheerful. The sales for the month of January up to this date are quite largely in excess of those for a corresponding time for last year. Our traveling salesmen who are now in the field, report a good feeling among their customers and are taking orders freely. Carload sales for nails and wire are not as frequent as they were last year but for other lines of goods there is a marked increase.

The weather here at the present time is more like April than January. Farm commodities of all kinds, save wheat, bring a good price. The price for wheat continues very low, and as a consequence a great deal of it is being held by the farmers instead of being marketed. This, in some localities, has a tendency to retard collections, but on the whole we have no complaint to make.

C. W. HACKETT HARDWARE CO.

THE MINNEAPOLIS TRADE.

We really have little to say and not much time to say it in. The weather has been fine so far this winter so that building operations have been progressing about the same as usual.

We think retail dealers as a rule are busy for this time of year; certainly we are. Prices, with the exception of nails and sash weights generally are well maintained. There is not much trouble in getting reasonable margin of profits if proper efforts are made in that direction. The past year has been a good one for Hardware trade as a rule and we anticipate a continuance for the coming year, but could hardly expect as large profits with prices at the point they are at now, still do not believe there will be any general declines.

W. K. MORISON & CO.

THE DENVER TRADE.

Business of the new year has opened in a very promising manner for Colorado. We have had an open winter with

very little cold weather to interfere with building, and many more than the ordinary number of mines and prospects have been able to continue work. In consequence, trade in our line has been above the average volume since October last. With the mines producing more than ever after the record-breaking of 1899, and all other industries in most flourishing condition, we ought to have a very satisfactory year to close the century.

THE GEORGE TRITCH HARDWARE CO.

THE SAN FRANCISCO TRADE.

An air of expectancy prevails! It seems like a hen is on and everybody is keeping quiet! On this afternoon of the 18th day of the month, San Francisco jobbers and retailers alike appear to be on the *qui vive* for news from the largely-attended annual meeting of the Pacific Coast Retail Hardware Dealers' Association, now in convention at Chico, 100 miles north of Sacramento.

Head officials of the Pacific Coast Jobbers' and Manufacturers' Association received notice that a quartet of St. Louis wholesale business men had arrived in Chico, without invitation, to attend the Hardwaremen's Convention, presumably to make an argument, among whom they hope to raise antagonism against the jobbers of the Coast prior to the meeting of the Interstate Commerce Commission, which will open in this city March 15th. This notice, which carried with it an invitation to the Pacific Coast Jobbers' and Manufacturers' Association to send delegates to the Chico convention resulted responsively in yesterday's departure of Wakefield Baker, of Baker & Hamilton; A. L. Scott, of Miller, Sloss & Scott; W. R. Wheeler, with Holbrook, Merrill & Stetson, and H. D. Loveland, superintendent of the Merchants' Mutual Adjusting Agency.

It is thought here that probably all the arguments will be gone over at the present retail Hardwaremen's annual meeting respecting the differential between the carload and less than carload shipment, leaving the question to the sober judgment of the retailers.

TRADES PRESS ASSOCIATION.

The Smith & Hemenway Banquet.

Following the custom of so many leading houses in the trade to "cull out a holiday" in commemoration of the prosperous conditions everywhere prevailing, the Smith & Hemenway Co. (No. 296 Broadway, New York,) on Saturday evening, January 6th, gave their first annual banquet to their employees, using the beautiful room of the Hardware Club, of New York, for this worthy purpose. W. Pierpont White, president of the Utica Drop Forge & Tool Co., acted as toastmaster, and well performed his part; some very happy responses were given by L. P. Smith, president, and J. F. Hemenway, secretary and treasurer of the Smith & Hemenway Co., and others connected with the firm, who were followed by James H. Kennedy, secretary of the Hardware Club and E. H. Darville, representing the *Iron Age*. A large attendance of ladies added much to the enjoyment of the occasion, and the event was one of memorable significance and thoroughly appreciated by all present.

✱

One of the best store mottoes I have seen recently is, "We are not satisfied unless you are." This was hung in a prominent place just inside the street door of a general store in a country town. It was printed in large stencil letters on a sheet of manila paper about 25x50 inches. It was so suspended from the ceiling that it could be read very easily by any one entering the store. It is a good business motto.—*Merchants' Journal*.

The United States is composed of 45 States and 5 Territories, the populations of some of the States exceeding 6,000,000 and with railways that reach every point, although it is over 3,000 miles across her territory.—*Exchange*.

The Ideal Trunk.

Among the additions to a Hardware dealer's stock contemplated by leading manufacturers in the United States, that of trunks is assuming some prominence. This is especially the case when a manufacturer makes an unique design or pattern of trunk that elevates it in the mind of the seller above all the ordinary kinds now on the market. L. Goldsmith & Son, Newark, N. J., who claim to be the only exclusive wholesale manufacturers of trunks in the United States, among the large number of special trunks

that they turn out, are bringing prominently before the trunk buyers of the United States an especially attractive design, which we illustrate in our columns herewith. As this firm devote their entire attention to the manufacture of trunks and possess all the requisite facilities for leading in this particular line, they can safely make a specialty of producing first class trunks at prices that will be attractive to the trade. The trunk that we illustrate is called their Ideal Trunk, the special feature of which is that the bottom is as accessible as the top. It is open in front, fitted complete with sliding drawers to allow the various articles of dress and toilet accessories to be kept entirely separate,

which really makes it as handy as an additional chiffonier, bureau or other facilities for the bestowal of the many separate and indispensable things so apt to accumulate in a room where a trunk is utilized. It is very evident that under these circumstances the contents can be got at with a great deal more of convenience than with the ordinary appliances, and can be arranged also without disadvantageous mixing of the contents. Every compartment is provided with straps, so as to prevent the contents from shifting during transportation. There is but little doubt that some business could be done with a specialty like this in any well organized Hardware and house-furnishing store, and as the above concern publish a catalogue illustrating and describing their entire product in a very graphic manner, it would seem to be desirable that a dealer should send for one, and inform himself as to the possibilities of utilizing some portion of this branch of the business.

Bench Show at the Carpenter's.

The carpenter had put down his tools and gone for his luncheon.

"Life for me is a perfect bore," said the auger.

"I'm a little board myself," said the small plank.

"There's no art in this country," observed the screw-driver. "Everything is screwed in my eyes."

"You don't stick to anything long enough to know what you are driving at," interjected the glue.

"That's just it," said the screw. "He never goes beneath the surface the way that jack plane and I do."

"Tut!" cried the saw. "I go through things just as much as you do. Life's stuffed with sawdust."

"Regular grind," said the grindstone.

"I agree with you," observed the bench. "It don't make any difference how well I do my work, I'm always sat on."

"Let's strike," said the hammer.

"That's it," cried the auger. "You hit the nail on the head that time."

"I'll hit it again," retorted the hammer; and he kept his word, but he hit the wrong nail. That is why the carpenter wears his thumb in a bandage. It was his thumb nail the hammer struck.—*Chicago Bulletin*.

AT THE TRAPS OR IN THE FIELD

Lafin & Rand Smokeless Powder will give a better pattern with the same velocity than any other powder made. Further than this you can always depend on its being just the same; hot or cold, wet or dry and in any climate. We guarantee this and invite tests. If you shoot a revolver or rifle you will be interested in our latest output, SPORTING RIFLE SMOKELESS. Write for information.

Sheffield Cutlery.

Despite talk about foreign competition, no manufacturers of table and pocket cutlery have ever succeeded in rivalling the wonderful work of the Sheffield cutlers. One trophy exhibited by the president of one of the big Sheffield concerns is only 5.8 in. in length by 1.5 of the same measurement in width; yet it is a perfect knife of steel, brass and ivory and has twenty blades. Another, only an inch in length when closed, has seventy blades, each of a different shape. Another, somewhat larger, of course, has 230 blades, each exquisitely etched with portraits of British celebrities, scenery, etc. As far as the number of blades is concerned, the most wonderful knife ever made (one of the regular pocket size) was exhibited by the Sheffield Manufacturers' Union at their exhibition in 1893. It was made of the very

finest steel, brass, gold, and pearl, and had 1840 perfect blades. This curious specimen of cutlery is valued at a sum equal to £125; either of the others mentioned could be bought for £25. In the years past the Sheffield cutlers' triumph was a hundred-blade knife made for George IV., which is still among the curiosities at Windsor Castle.—*Ironmongery.*

How to Treat Persons Overcome by Gas.

In regard to the treatment of persons overcome with gas, several suggestions were made by different speakers at the recent meeting of the American Gaslight Association at Toronto. The most practical were those quoted on the authority of a prominent physician:

1. Take the man at once into the fresh air. Don't crowd around him.
2. Keep him on his back. Don't raise his head or turn him on his side.
3. Loosen his clothing at his neck.
4. Give a little brandy and water, not more than four table-spoonfuls of brandy. Give the ammonia mixture (one part in all, aromatic ammonia, to sixteen parts water) in small quantities at short intervals, a teaspoonful every two or three minutes.
5. Slap the face and chest with the wet end of a towel.
6. Apply warmth and friction if the body or limbs are cold.
7. If the breathing is feeble or irregular artificial respiration should be used, and kept up until there is no doubt it can no longer be of use.
8. Administer oxygen.—*College Record.*

The United States has many excellent seaports on the Atlantic and Pacific Oceans and the Gulf of Mexico.

The largest river in the world is in South America.

Mexican Trade.

Among the delegates from Mexico to the International Commercial Congress at Philadelphia was Mr. Salvador Echegaray, whose paper on the various conditions affecting Mexican trade was listened to with great attention. His remarks, containing, as they do, much valuable information for merchants and exporters of the United States, were substantially as follows:

"The exports of merchandise from the United States to Mexico, which in 1888 were about \$10,000,000, were in the last fiscal year of about \$24,000,000, an increase of 140 per cent.

"Mexico buys from the Americans more than Italy, Russia and Spain, more than China or Japan, and more than every other country in America, with the exception of Canada. As a consumer of American goods Mexico comes next only to six other countries.

"After the United States, England, Germany and France hold important places in our commerce. The first with its cotton goods and its iron; the second with its Hardware and iron goods, and the third with its clothes, silks, carpets and manufactures of hosiery. In our country there are a great number of Germans in the Hardware trade, French men in clothing and Spaniards in groceries. Americans have hardly begun to establish retail commercial houses, and they prefer to establish agencies, buying their goods from the United States. I think that the branches of iron work, furniture, hats, agricultural, stationery, vehicles, saddlery, sanitary plumbing, shoes and some other articles would give excellent results for retail selling.

"American trade in Mexico is inferior to the European in that the American merchants want to do business exclusively on a cash basis, while the Europeans are willing to grant five or more months for payment. The custom, already firmly established by long practice among the large Mexican merchants, is to buy at long terms abroad

and to sell in the same manner to the tradesman. Banking accommodations, which we now begin to enjoy, perhaps will make easy the adoption of the American system; but such a change is by no means certain, as a long habit of many years is opposed to it."

Billy Benson Was There.

Down on Court Street, in the old days stood the old Hooley minstrel hall. Minstrel performances used to be greatly relished by Brooklyn people, who attended largely at every opportunity. Local "gags" were greatly relished and many of them were cleverly worked up. One of the crudest jokes was once played upon Billy Benson. His friends never tire of telling it. It happened one night during a crowded performance. Mr. Benson, with several friends, sat down in front.

The performance was about half over when a messenger came on the stage and handed a telegraph envelope to the interlocutor. He read it and advanced to the front.

"Is Mr. Benson in the house?" he asked.

Mr. Benson immediately rose. "I am Mr. Ben—"

He never finished the sentence. At that instant the performers broke into the tune of the "Upidee" college song and roared it out in full chorus:

Mr. Benson's now in town,
Upidee, upida;
Mr. B. can now sit down,
Upidee, upida,

Situations Wanted

WANTED.—A position with some concern to manufacture golf balls, golf clubs and golf supplies. Fifteen years with the Silvertown Golf Works. Have the formula for the Silvertown Golf Ball; understanding the process thoroughly. Address, W. T. D., Waterbury, Conn. 25

What Is Lyddite?

Referring to the reports that the Boer generals have protested against the use of lyddite as inhuman, the *London Graphic* says: "The high explosive thus called from the name of the small Kentish town and gunnery centre where the experiments with it were made, is nothing else than picric acid brought into a dense state by fusion. Picric acid is a bright yellow substance freely used in peaceful industries for dyeing purposes. It is obtained by the action of nitric acid on phenol or carbolic acid. It burns very violently, and, owing to the tremendous blast produced by the explosion, the destructive effect of a bursting shell filled with it is some eleven times greater than that of a shell filled with powder. Common shells of forged steel filled with lyddite are used with 6 and 9 2-inch breech-loading guns and with howitzers; also with 4 to 6-inch quick-firing guns.

"All lyddite shells are equipped with percussion nose fuses only; hence their explosion takes place on impact in the following fashion: The percussion fuse ignites a picric powder exploder, which in turn ignites the bursting charge of lyddite, the detonation of the fuse and of the two explosives inside the shell being instantaneous. The picric powder exploder, we should add, is inserted in a recess left in the lyddite for that purpose. Lyddite shell is to some extent less barbarous than shrapnel exploded by powder, for though widespread its death-dealing effects are due more to air-concussion than to the wounding effects of the flying fragments. In other words, in the case of a lyddite shell bursting in a group of men, the greater number will be killed, not by pieces of the shell, but by the blow of the suddenly compressed air."

Durability of Timber.

The Railway and Engineering Review has compiled a table showing the durability of various woods, when used as piling and bridge timbers on American railways. It finds that taking the country over oak is used most extensively for piles and white and yellow pine for framed timbers. The testimony shows that the life of oak piling driven in salt water ranges from 9 to 40 years; in fresh water from 8 to 30 years, with average about 20 years; in dry land 8 to 20 years, the average being about 12 years. Cedar lasts about 20 years; chestnut from 12 to 40 years; cypress 7 years; Norway pine 6 years; spruce 4 to 10 years; tamarac 8 to 18 years. Mineral ingredients in the soil have much to do with the life of piling. In bridge timbers protected from weather and kept free from dirt accumulations the life of all wood is reported almost indefinite, ranging from 14 to 50 years and beyond. In unprotected weather the range of life of yellow pine is from 8 to 20 years; of white pine from 8 to 18 years; Norway pine 8 to 10 years;

spruce, 5 to 10 years; fir, 12 to 20 years; white oak 7 to 18 years. Vertical timbers are found to last nearly twice as long as horizontal timbers.

How Scissors are Made.

Though no complexities are involved in the making of these indispensable articles, or much skill required, yet the process of manufacture is very interesting. They are forged from good bar steel heated to redness, each blade being cut off with sufficient metal to form the shank, or that designed to become the cutting part, and bow, or that which later on is fashioned into the holding portion.

For a bow a small hole is punched, and this is afterward expanded to the required size by hammering it on a conical anvil, after which both shank and bow are filed into a more perfect shape, and the hole bored in the middle for the rivet. The blades are next ground, and the handles filed smooth and burnished with oil emery, after which the pairs are fitted together and tested as to their easy working.

They are not yet finished, however. They have to undergo hardening and tempering, and be again adjusted, after which they are finally put together again and polished up for the third time. In comparing the edges of knives and scissors it will be noticed, of course, that the latter are not in any way so sharply ground as the former, and that in cutting scissors crush and bruise more than knives.

Old Utensils.

It is remarkable how few of the minor and less intrinsically valuable articles of household use, common in the time of our grandfathers, have survived to the present day. Occasionally, in remote farms or country cottages, one comes across an antique pair of snuffers, suggesting the bygone era of the tallow dip, a metal warming pan, an ancient copper saucepan, or some other old utensil which carries one's mind back to the "good old days," before the modern systems of heating and lighting and the paraphernalia of scientific cookery made their appearance. So unfamiliar are such things becoming, however, to the present generation that they are already finding a place in museums and collections of curiosities. But the common, every-day household utensils, of tinware and such like, used early in the century, are almost as scarce as hens' teeth. We hardly know what kind of articles in that line our progenitors used in the days before machinery turned house-furnishing goods out by the million. One thing we do know, that they were made laboriously by hand and that they were fashioned to last and not merely to sell.—*Metal Worker*.

First Moveable Type.

Corea was the first of all people to originate moveable metal type, says *Harper's*.

It was in the reign of King T'a-jong that a font of metal type was cast, the first the world had ever seen. The art of xylography had existed for centuries and clay type had also been used in Japan, but Corea was the first to discern the need of the more permanent and durable form of metal type, and so well did she carry out her plan that the type then cast has come down to the present day practically unimpaired. Each type was built on the principle of the arch, being cylindrically concave on the under side. The purpose of this was to secure a firmer hold upon the bed of beeswax which constituted the "form," technically so called. A shallow tray was filled with wax and the type, after being firmly imbedded in it, were "planed" in the ordinary manner. The printer sitting cross-legged before it, applied the liquid ink by means of a soft brush, after which a sheet of paper was lightly laid upon the form. A piece of felt was brushed softly across the paper with the right hand and the left removed the printed page. In this way it was possible to strike off some 1500 impressions a day.

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Camden, N. J.—Vallee Bros. Electrical Co., Hardware and electrical supplies. Capital \$300,000. Incorporators: C. A. Vallee, G. W. Vallee, F. D. Sweetser, W. H. Grove.

Corydon, Ia.—The E. A. Rae Co. has filed articles of incorporation with the Secretary of State. Its capital is \$100,000. It will do an implement and Hardware business.

Coshocton, Ohio.—Gray Hardware Co., Hardware business. Capital, \$20,000. Incorporators: G. M. Gray, Adele D. Gray, T. A. Gray, J. C. Gray, Katie F. Johnson.

Denver, Colo.—Victor Mines Supply & Hardware Co.; \$50,000; John Gray, Frank J. Campbell, Mark D. Greve, Solomon Camp, and Charles Walden; Victor and Teller County, with branch in Denver.

Lincoln, Nebr.—Lincoln Hardware Co., Hardware business. Capital, \$50,000. Incorporators: W. E. Jakway, W. G. Morrison, R. M. Joyce.

Marietta, O.—The Strecher Bros. Co. has incorporated with \$100,000 capital stock to carry on and do wholesale business in leather, saddlery, Hardware, etc., and manufacture harness. C. F. Strecher, B. F. Strecher, Charles S. Schaal and W. S. Plummer are the incorporators.

Paris, Tex.—Allen-Willis Hardware Co. Capital stock, \$20,000. Incorporated by M. F. Allen, T. F. Willis, E. S. Conner and others.

Philadelphia, Pa.—J. Kinkerter and R. L. Sheppard have formed a partnership under the name of Kinkerter & Sheppard to carry on the Hardware business of the late Joseph L. Kinkerter at No. 4669 Frankford Avenue, assuming his debts and the bills due him.

Pierre, S. Dak.—Articles of incorporation have been filed for the Eggerton-Gaylord Hardware Co., with a capital of \$500,000. Incorporators: Victor E. Manwell, Leroy C. Murray and L. C. Smith.

San Francisco, Cal.—Lewis E. Spear & Co., Hardware. Directors: Lewis E. Spear, of Alameda, H. P. Wilson, W. H. Martin, A. F. Spear and G. A. Martin, of San Francisco. Capital stock, \$50,000; all subscribed.

St. Louis, Mo.—The William H. Hahn Hardware Co. have filed articles of incorporation with a capital stock of \$7,000. The incorporators are William H. Hahn, H. H. Dustmann and Adam Bauer.

Syracuse, N. Y.—The R. C. McClure Co., to deal in Hardware. Capital, \$50,000. Directors: Robert C. McClure, John McClure, Chase; John H. Costello, Syracuse.

Changes and Improvements.

Belle Centre, Ohio.—R. F. Harrod and E. E. Carnes have purchased the Hardware stock of M. S. Harrod & Son, and will conduct the business in the same room.

Boone, Ia.—The Hardware business operated by the firm of Black & Co. has been sold to Geo. W. Roe, who for many years

has been an employe in Crary Bros.' Hardware store.

Chester, Pa.—Benjamin F. Riley, the enterprising Hardware merchant, of No. 605 Edgmont Avenue, has purchased of G. W. Howard the triangular piece of ground at Wall and Welsh Streets, and an architect is now preparing plans for the immediate erection of a handsome three-story brick building thereon.

Clay Center, N. Y.—It is announced that the mammoth Hardware and wagon and buggy house of Vincent Bros., will be dissolved this month.

Derry, N. H.—Fred S. Pillsbury has sold his entire Hardware and paint business to Henry W. May and William F. Neal, and the latter have taken possession of Mr. Pillsbury's old stand.

Elizabeth City, N. C.—The Hardware firm of Sawyer & Aydlett has dissolved partnership. Mr. Aydlett having purchased the interest of Mr. Sawyer.

Fort Wayne, Ind.—Henry Pfeiffer & Son have taken charge of the store of J. C. Peters & Co. The latter firm, one of the oldest and best known in the city, retire from the retail Hardware business. Pfeiffer & Son will conduct the business at the old stand, on East Columbia street.

Litchfield, Conn.—John Marcy has bought the South Farms Hardware store on West Street, of W. T. Marsh.

Morristown, N. J.—William E. Day, a clerk in the Hardware store of George E. Voorhees, has purchased an interest in a similar business conducted by A. G. Phillips. The business will be continued at the same place under the name of Phillips & Day.

Muskegon, Mich.—John A. Miller, the well-known Hardwareman who has been in business here for over twenty-five years, has purchased the W. W. Owen block at No. 121 West Western Avenue, and will move his stock therein.

Nashville, Tenn.—H. G. Lipscomb & Co., wholesale Hardware, have removed from their former location on Market Street to the new store erected on Market Street by Mrs. Charles Nelson.

North Rose, N. Y.—The large Hardware store owned by Hill & Julareau, has been sold to Oren Scutt and John Gray.

Norwich, N. Y.—The firm of Terwilliger & Hill has been dissolved.

Pomeroy, Wash.—Willis & Stevenson, Hardware, have dissolved, Mr. Stevenson succeeding to the business.

Redwood, N. Y.—Fred White has become a partner with his father in the Hardware business. The new firm will be known as E. J. White & Son.

Rome, N. Y.—The firm of Raffauf & Bael, Hardware dealers, has been dissolved. The business will be continued by Mr. Raffauf.

Scranton, Pa.—At a meeting of the stockholders of the Lackawanna Hardware Co., it was decided to go out of business just as soon as the stock can be disposed of.

Somerville, N. J.—Milton Labaw makes

announcement of his purchase of the J. M. Whitenack & Co. Hardware store.

South Norwalk, Conn.—Charles Black, who has conducted a stove and Hardware store on the Washington Street bridge for some time, has discontinued the business.

Business Embarrassments.

Baltimore, Md.—Arthur D. Foster has been appointed receiver for the brass-fitting and Hardware business of Robert E. Kirk, No. 114 South Calvert Street.

East Aurora, N. Y.—James C. Castle, dealer in agricultural implements in this village, has filed a voluntary petition in bankruptcy. The liabilities are \$10,626.12 and the assets \$7,804.30.

Logan, Utah.—W. H. White, Hardware, has made an assignment. Liabilities, \$3071.63; assets, \$2497.56.

Ottawa, Ohio.—J. H. Duling & Bro., dealers in agricultural implements, have made an assignment to John F. Cover. The assets, consisting of stock and notes, are roughly estimated at about \$4000 and the total liabilities at about \$5500.

Burglaries in Hardware Stores.

Atlanta, Ga.—Heinz & Son, revolvers.

Florence, Colo.—Wilson Hardware store, cutlery.

Lansdale, Pa.—J. Irwin Ambler, \$20.

Stanwood, Wash.—M. A. Goodykoontz, \$100.

Fires in Hardware Stores.

Algoma, Wis.—C. B. Tift's Hardware store burned. Loss, \$12,000 on stock and building. Insurance, \$3500 on building and \$5500 on stock and fixtures.

Comanche, Tex.—A fire in the Hardware store of Wm. Barnes consumed the entire stock and building; insured; loss about \$2000.

Fairmont, W. Va.—Leonard & Co.'s Hardware store has been destroyed by fire.

Franklin, N. H.—R. G. Burleigh & Co.'s Hardware store, has been destroyed by fire. Loss, \$17,000.

Ishpeming, Mich.—Minden block, occupied by the Jochim Hardware Co., badly damaged by fire. Loss on stock and building, \$5000.

Miami, Fla.—Frank T. Budge's Hardware store has been destroyed by fire. Loss, \$35,000; insurance, \$20,000.

North Indianapolis, Ind.—Benj. F. Schmidt's Hardware store has been damaged by fire.

North Platte, Neb.—The Hardware, furniture and implement establishment of Victor Meyer of this city has been totally destroyed by fire.

Philadelphia, Pa.—Joseph Osterman's Hardware store at No. 4411 Main Street, Manayunk, has been destroyed by fire.

Ridgetown, Ont.—Green's Hardware store has been destroyed by fire.

Tulsa, Ind. Ter.—Davis & Bowdin's Hardware store has been destroyed by fire.

Wortham, Tex.—T. Longbotham's Hardware store has been destroyed by fire.

ALL
THE NEWS.

HARDWARE

HARDWARE
EXCLUSIVELY.

The name of the only Hardware Trade Journal in America with the motto “All the News; Hardware Exclusively.”

It is published on the 10th and 25th of each month, which is as often as any dealer desires to receive a trade paper which he intends to read.

Has tabulated records of all new firms and companies and their various changes in the manufacturing line. All the new stores and business news among the jobbers and retailers of the country; with a Bicycle and Sporting Goods Record covering the changes daily occurring in that important line.

For the benefit of the retail dealer it has a “Prices Current” in every issue covering 32 columns of its pages. A careful consideration given to this department of the paper may save many dollars to its subscribers.

It offers to the advertisers advantages possessed by but few of its competitors in its legitimate field. In addition to foreign circulation, embracing 74 countries besides our own, it reaches within the limit of the United States every State and Territory, where trade and traffic have a foothold.

It has just completed its twentieth volume and is consequently in no experimental stage, waiting to establish a subscription list.

HARDWARE'S rate card is based on actual value. It is a paper for the Hardwareman, possessing the respect of the trade, the confidence of its patrons, the thanks of its subscribers and the courage of its convictions.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, over the country are requested to contribute to this page News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Etc.

Albany, N. Y.—Manhattan Weather Strip Co., New York City, manufacturing weather strips. Capital, \$10,000. Incorporators: S. Henry, H. H. Henry, both of Brooklyn; M. Snowden, J. Bergfalk, of New York City.

Athol, Mass.—L. S. Starrett Co., machinery and tool manufacturers. Capital stock, \$100,000, par value shares \$100. L. S. Starrett is president and treasurer.

Bridgewater, Mass.—George A. Bryant of Bridgewater, and Elbridge W. White of East Bridgewater, have formed a partnership under the style of Bryant & White, for the purpose of manufacturing tacks at the "Old Forge" water privilege in East Bridgewater.

Camden, N. J.—The Philadelphia Pneumatic Tool Co. have filed articles of incorporation. The object of this corporation is the manufacture of pneumatic tools. The capital stock of the company is \$100,000, and the amount paid in is \$1000. The incorporators are: J. William Tierney, George W. Borton and J. Howard Miekli.

Carthage, Mo.—M. S. Parsons Implement Co., manufacturing machinery. Capital, \$10,000. Incorporators: M. S. Parsons, M. E. Parsons, W. L. Culbertson, M. E. Zane, R. E. Lovins, all of Carthage.

Clinton, Ia.—Articles of incorporation of the United States Lock Co. have been filed here by D. J. Batchelder, Jacob H. Peter and Alexander Cramend. The capital stock is \$100,000, with \$90,000 paid up.

Dover, Del.—The United States Rattan Co., of New York, has been incorporated for the manufacture and sale of rattan and reed goods. Capital \$100,000.

Hartford, Conn.—The articles of incorporation of the Hartford Machine & Tool Co. have been filed in the Town Clerk's office.

Huntsville, Ala.—The Southern Handle Co., M. R. Grace, manager, has selected a site in West Huntsville for its new \$60,000 handle factory, and building will be begun as soon as weather permits. The factory will be located on the street across from the furniture factory on the electric railway.

Minneapolis, Minn.—The Crescent Stove Polish Co., which will manufacture stove polish and utensils to be used in the blacking of stoves, has been incorporated. The offices are in this city.

Newark, N. J.—Driver-Harris Wire Co.; manufacture wire. Capital, \$30,000. Incorporators: W. B. Driver, F. L. Driver, both of New York City; F. R. Harris, of Waterbury, Conn.; J. E. Bugby, of Newark.

Niagara Falls, N. Y.—Hayes Grate & Mantle Co. Capital, \$30,000. Directors: Henry O. Hayes, J. Challis Jones and John Dobbie, of Niagara Falls.

Philadelphia, Pa.—United States Aluminum Co., manufacturing aluminum ware

and other articles. Capital, \$25,000. Incorporators: D. Netter, J. Marcus, C. M. Zimmerman, J. Netter, H. H. Netter, all of Philadelphia, and others.

Pierre, S. D.—Articles of incorporation have been filed for the Arnold Flexible Bracket Co., with a capital of \$200,000. Incorporators: M. D. Orr, A. S. Healy and L. C. Smith.

Pittsburgh, Pa.—The American Pipe & Foundry Co. has been organized with a capital of \$250,000. The new company will manufacture soil and plumbers' pipe, and will remodel the Berlin Iron & Lead Works and William G. Price Co.'s plants at Jeanette, Pa.

Plainville, Conn.—A new company has been organized to carry on the manufacture of iron and brass casters. W. L. Cowles, George D. Clark, and Dwight Clark are equally interested in the venture, and the capital stock will be \$25,000. Articles of incorporation have been filed with the Secretary of State.

Pontiac, Mich.—The Howland Mfg. Co. has been organized. They will erect a new building and make farming implements.

Rock Hill, S. C.—Southern Harrow Co. Capital, \$50,000. Incorporators: J. B. Johnson, E. E. Poag, J. R. Parron, all of Rock Hill.

Saginaw, Mich.—Michigan Wheelbarrow & Truck Co., manufacturing wheelbarrows, trucks, etc. Capital, \$25,000. Incorporators: G. A. Alderton, A. C. Melze, both of Saginaw; B. Stebbins, of Lansing.

Scranton, Pa.—The charter of the Black Diamond Powder Co. has been incorporated with Recorder Fred Warnke. George G. Brooks, Thomas R. Brooks, W. L. Connell, John H. Brooks, G. T. Davis, Edward James, and William Davis, of Scranton, and F. C. Reese, of Pottsville, are the incorporators. The capital stock is \$50,000.

Springfield, O.—Patric Furnace Co., manufacturing heating apparatus. Capital, \$40,000. Incorporators: O. W. Rodgers, R. R. McGregor, A. S. Rodgers, C. F. Smith, R. H. Rodgers.

Changes and Improvements.

Chicago, Ill.—R. Robinson & Sons, name changed to Robinson Furnace Co.; object changed to manufacture stoves, ranges, furnaces, and heaters; and capital stock decreased from \$80,000 to \$30,000.

Cincinnati, Ohio.—The Wais & Root Punch & Shear Co., increase of capital stock from \$50,000 to \$75,000.

Detroit, Mich.—The Cass Farm Improvement Co. has sold to the Boyer Machine Co., of St. Louis, Mo., for \$19,000, a piece of vacant land 185x330 feet, at the intersection of Second Avenue and the Belt line. The purchasers, who have an extensive factory in St. Louis, will move their plant to Detroit, increasing their facilities and output, and bringing with them about 200 skilled workmen now employed in their St. Louis plant.

Erie, Pa.—The Odin Stove Co. are negotiating for the purchase of the old Lloyd & Sterrett shop on West Twelfth Street, for a stove manufactory. The present quarters on Twelfth Street near Chestnut are declared to be too small and the firm need more room than is afforded by that location.

Lacolle, Pa.—Force & Briggs are establishing a pin and bracket manufactory in this town. The buildings are taking form, and the boilers and a portion of the machinery have already been shipped, and it is expected that the plant will be in operation in a short time.

New Haven, Conn.—Fire Marshal Gladwin has issued a permit for the erection of a one-story brick factory building to cost \$1200 by the New Haven Spring Co. The factory will be located on the lot on Collis Street which the Spring Co. recently purchased from William Kaerhle.

Oswego Falls, N. Y.—The new Foster Knife Works is now nearly completed and most of the machinery in operation. There are about thirty hands employed in the works, most of whom came here from Phoenix.

Reading, Pa.—The agricultural implement works of Schaeffer, Merkel & Co., at Fleetwood have been sold at assignee's sale to Herman F. L. Rummel, of Reading, for \$22,000.

St. Louis, Mo.—The Twin Burner Vapor Stove Co. have filed a statement of increase of capital stock from \$15,000 to \$45,000.

Wakefield, Mass.—Morrison & Stoddard, who purchased D. H. Philbrook's business, Foundry Street, have rented a portion of the lower floor in Wakefield's block and will continue the manufacture of screens, etc.

Youngstown, Ohio.—The Youngstown Stove & Range Co. will build a plant in Haselton and make improvements that will cost from \$15,000 to \$20,000. The company's new plant will be located on land adjoining the plant of the Youngstown Iron & Steel Roofing Co. The main building will be 100x50 feet and two stories high. The company expects to occupy its new quarters by April 1.

Recent Embarrassments.

Auburn, Me.—The Whitman Agricultural Works, manufacturers of farm machinery, have made a general assignment to J. P. Hutchinson, of this city. Liabilities about \$50,000.

Recent Fires.

Buffalo, N. Y.—Fire of unknown origin started in the smelting room of the Sidney Shepard & Co. plant at No. 191 Clinton Street, a few days ago. One of the firm said that in all probability the damage would not exceed \$500. Two rooms were, apparently, completely wrecked, and the water did its share toward destruction.

Miscellaneous.

Albany, N. Y.—At a meeting of the Empire Implement Mfg. Co. they elected the following directors: Frederick R. Green, Martin J. Dwyer and James A. Robinson.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Agencies, Etc.

Cleveland, Ohio.—The Baker Motor Vehicle Co. has been organized with R. C. White, president; Fred. White, vice-president, and Walter Baker, general manager. The Whites are connected with the White Sewing machine Co., while Walter Baker is at the head of the American Ball-bearings Co., and has long been identified with the motor-vehicle experiments in this city. The company will build electric carriages in a new factory, already under way.

Collinsville, Conn.—Horne Bros., erecting factory to make bicycle parts.

Dover, Del.—Kidder Motor Vehicle Co. has been incorporated to deal in motors and motor vehicles. Capital, \$500,000. Incorporators: T. A. Barnes, C. R. Bishop, both of New Haven, Conn; J. Virdin, of Dover.

Erie, Pa.—Jacob Roth is proprietor of the new Roth Cycle Works, recently established at the old Quaker warerooms at No. 1018 State Street. This new industry gives employment to ten experienced bicycle builders and the factory, which is very complete, occupies 5000 feet of floor space. The product of Mr. Roth's factory is the new "Pennsylvania" bicycle.

Glenville, Ohio.—Charles Darrall has rented his store to F. A. Henderson, No. 146 Hoyt Avenue, for a bicycle store and repair shop.

Haverhill, Mass.—E. P. Blake Co. has been incorporated.

Lewiston, Me.—The Gledhill Chainless Lever Bicycle Co. has been organized for the purpose of owning and controlling a certain invention for improvement of velocipedes and letters patent of T. N. Gledhill for same with \$10,000 capital stock. The officers are: George W. Raymond, of Lewiston; treasurer, T. N. Gledhill, of Lewiston.

Mount Holly, N. J.—Diebel-Eppler Mfg. Co., manufacture bicycles. Capital, \$50,000. Incorporators: W. Diebel, J. Eppler, of Philadelphia, Pa.; B. W. Story, of Mount Holly.

New York, N. Y.—Alexander Whitley, sporting goods. Capital, \$30,000. Incorporators: A. Whitley, A. P. Perkins, W. L. Trussell, all of New York City.

New York, N. Y.—Nason-Ryder Co., to deal in sporting goods. Capital \$10,000. Directors: Waldo E. Nason and Watson L. Savage, New York City; Edward B. Ryder, Plainfield, N. J.

New York, N. Y.—M. L. Bridgman, formerly in charge of the Pope Co.'s establishment near Central Park, has organized the New York Vending Co. This company controls a slot machine for tire inflation in New York State. It is understood the company will operate the metropolitan market itself, and sell rights in other parts of the State. Associated with Mr. Bridgman are E. K. Austin, C. H. Luscomb, George R. Bidwell, S. C. Croft and Orren C. Frost.

Trenton, N. J.—The Philadelphia & Atlantic City Automobile Co. has been incorporated by P. A. Dempsey, M. A. Dempsey, H. H. Hetzel, C. A. Bowman and John L. Semple; to buy, sell and operate automobiles anywhere, but it is said that the real object is to establish a line of automobiles in Atlantic City. Capital stock, \$1,000,000.

Changes and Improvements.

Bridgeton, N. J.—Miller Bicycle Works will occupy Creamer & Sparks' factory building.

Chicago, Ill.—The headquarters of the American Electric Vehicle Co., according to announcement, will be removed to New York City. The offices and factory here will be vacated, and the company will establish itself in a large plant in New Jersey, near New York, the factory to have a capacity of five vehicles a day.

Chicago, Ill.—The Chicago Handle-Bar Co. have bought the stock and machinery of the League Handle-Bar Co. Also the entire business, stock, plant, and good will of Geo. G. Spencer, of Chicago. The new company will be called the Chicago Handle-Bar Co., and the officers will be: Geo. W. Webster, president and secretary; Geo. G. Spencer, vice-president and treasurer. An office and wareroom will be opened in New York, where a large and complete stock for both domestic and foreign trade will be carried.

Chicago, Ill.—Vim Bicycle Co., name changed to Vim Co. and capital stock increased from \$2000 to \$10,000.

Cleveland, Ohio.—H. S. Moore & Co., succeeded by H. S. Moore.

Cleveland, Ohio.—The Cleveland Ball & Screw Co. are so increasing their production that they were somewhat crowded for space, and have removed the general offices of the company to one of the leading office buildings in the business section of Cleveland. The sales department, in charge of Charles M. Pryse, will be found at Nos. 446 448 Arcade Building. The company are making active preparations to go into the manufacture of screw machines, and a line of these tools will be announced before long.

Ellwood City, Pa.—It is reported that the plant of the Shelby Steel Tube Co., in that city, is to be closed up and the machinery removed to Greenville and operated in conjunction with the company's plant there. If this is done the Greenville plant will be one of the largest and most complete of its kind in the country.

Johnstown, N. Y.—Geo. E. Fulton Co., partnership dissolved.

New York, N. Y.—Hermann Boker & Co. have dissolved partnership by mutual consent. Thus a famous jobbing firm passes away. A. H. Funke, well known through his long connection with the concern will conduct the gun department, including bicycle sundries, at the same address, No. 103 Duane Street.

Philadelphia, Pa.—The good-will, stock, fixtures and plant of Clothier & Burrows, have been bought by Emil Baumblatt, Jr.,

who will continue to manufacture the Roman bicycle on the same lines as heretofore.

Pittsburgh, Pa.—Campbell & Smith, succeeded by Wm. Smith.

Pittsburgh, Pa.—The Atlantic Tube Co., which was incorporated under New Jersey laws last April, has certified to an increase of its authorized capital stock from \$250,000 to \$750,000.

Reading, Pa.—The Bare-Lengel Mfg. Co., Irvin D. Lengel succeeds.

Santa Ana, Cal.—Leck & Rice, dissolved. **Scranton, Pa.**—Kellum & Conrad, Conrad Bros. succeed.

Somerville, N. J.—Garretson Cycle Co. will move into new quarters March 1.

Warren, Ohio.—E. L. Eggleston & Son, sold out to Henderson & Heasley Co.

Willimantic, Conn.—Bugbee & Bradbury, No. 76 Church Street, dissolved; Mr. Bradbury will continue business.

Recent Embarrassments.

Boston, Mass.—Horace Partridge & Co., manufacturers of and dealers in athletic goods and bicycles, with headquarters at Nos. 84 and 86 Franklin Street, Boston, have made an assignment for the benefit of creditors. The firm is controlled by Frank P. Partridge.

Bridgeport, Conn.—Philip W. Westlake, bicycle dealer has made an assignment. Liabilities, \$6000; assets, \$5000.

Buffalo, N. Y.—W. H. Penseyres and C. Haberer filed petitions in voluntary bankruptcy.

Chicago, Ill.—The Thorsen Co., assigned.

Recent Fires.

Bay City, Mich.—Wm. Deaker, store damaged by fire.

Boston, Mass.—Iver Johnson Sporting Goods Co., No. 408 Washington Street, have suffered from fire. Loss, \$1000.

Canton, Ohio.—Bicycle Mfg. Co., damaged by fire.

Glen Falls, N. Y.—Budd Bros. Bicycle Works have been destroyed by fire.

Hartford, Conn.—A. H. Pomeroy, damaged by fire; insured.

Louisville, Ky.—Prince Wells, store damaged by fire.

Portland, Ore.—Wm. Lea, store damaged by fire; loss, \$1000.

Recent Burglaries.

Pine Bluff, Ark.—C. Vose & Bro., 300.

Miscellaneous.

New York, N. Y.—The regular quarterly meeting of the board of directors of the American Bicycle Co. was held recently at its office in this city. This board consists of Albert G. Spalding, Albert A. Pope, R. Lindsay Coleman, R. Philip Gormully, H. A. Lozier, A. Featherstone, R. S. Crawford, E. C. Stearns, William Barbour, George W. Young, Charles L. Ames, J. W. Kiser, Gardiner M. Lane, George F. Crane and George Pope.

**CARY'S PATENT
HINGE
AND
HASP**

Designed Especially for
 Fruit Crates, Milk,
 Egg, Cracker and
 other styles of
 Boxes, requiring a
 hinged cover.

CARY MFG. CO.,
 19-21 Roosevelt St.,
 NEW YORK.

IN our patent loop joint hinge, one part of the loop is made rigid to one-half of the hinge, making the strongest, neatest and best hinge for the purposes mentioned.

Our patent fastening plate and catch which go with the hasp are so perfect in their construction that the catch never gets loose from the plate, as is often the case with others on the market.

When desired, we furnish our hasp and catch with a small hole through each, so that a wire can be inserted and then sealed by use of a lead seal.

IF YOU WANT TO KNOW ASK US

How to file Catalogues, quotations and every class of data, with no more trouble to file than to throw in the waste basket, and as easy to get when wanted as though in your vest pocket.

FOLDING PAPER BOX CO., South Bend, Ind.

"A PROFITABLE MEDIUM TO ADVERTISERS."

Gilbert & Bennett Mfg. Co., Chicago and New York.
[Wire Goods]: You have reason to be proud of HARDWARE's success both as a journal of interest and of usefulness to your readers, and as a profitable medium to the numerous advertisers. From the fact that our card has been steadily published in its columns from the first number, it must be concluded that we have found you a satisfactory medium.

"IT KEEPS ME POSTED."

Sickels, Preston & Nutting Co., Davenport, Iowa.
[Wholesale Hardware]: HARDWARE keeps me posted not only on the market, but on new goods and specialties which are ever being manufactured. The trade reports are especially attractive, and give one information on the markets and business situation, as well as politics in various parts of this country.

Theo. Neuhaus.

**Can You Afford-**

to carry
in stock unknown brands of stove polish that your
customers know nothing about, brands they do
not call for, the quality of which is inferior, gives
them dissatisfaction, and the consequent sale of
which brings discredit to your store? Your best
judgment answers **NO!** Then sell **ENAMELINE**,
the Modern Stove Polish. Paste, Cake or Liquid
If you are doing business for a profit it will pay
you to handle our whole line.

J. L. PRESCOTT & CO., NEW YORK.

U. M. C.**"Smokeless" Shells.****Nitro Powders.****"U. M. C. No. 3" Primers.**

All sportsmen know that
the hands and arms, in shoot-
ing, become accustomed to
the recoil produced by any
uniform charge—and that
the slightest unexpected
variation of load will make
a perceptible difference in
their marksmanship.

It is because of the abso-
lute uniformity of charge in
U. M. C. Factory Loaded
Shells—and the close atten-
tion paid to every detail of
construction that they are
so deservedly popular—be-
ing used more than any
other shells of the same
grade in the market.

**THE BURR PATENT
STEEL**

A Safety Lift Block

A Perfect Self-Locking Rope Tackle Block.

Runs as freely as an ordinary rope tackle block.

Holds more securely than a chain block.

Locks instantly and does not cut the rope.

Allows the load to be lowered safely and slowly, the operator using only one hand.

Cannot stick nor jam when the load is to be lowered.

"I have tested the Burr Self-Locking Steel Tackle Block and find it the most practical, quick and reliable Safety lift I know of."

CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chatillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

has our name as makers plainly on the dial, thus:

and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.

These Tools are recognized in the Markets, Packing Houses and Abattoirs throughout the United States as the standard of excellence, quality being the first consideration. REMOVAL NOTICE!

The Hancock Inspirator Co.

beg to announce that they have moved their General Office and Salesrooms to

85-87-89 LIBERTY ST., NEW YORK.

The HANCOCK INSPIRATOR

has been on the market for 22 years, during which time 230,000 have been made and sold.

The reputation established for these goods has led some manufacturers to make INJECTORS and INSPIRATORS which resemble

THE CELEBRATED HANCOCK INSPIRATORS.

For your own protection and that of your customers accept only INJECTORS and INSPIRATORS that have the words "The Hancock Inspirator" cast on them, and see that the box containing same is marked:

MANUFACTURED BY
THE HANCOCK INSPIRATOR CO.,
BOSTON, MASS.

We also make THE "LOFTUS" Automatic INJECTOR, Ejectors, and General Jet Apparatus, The Hancock Hydro-Carbon Burner and The Hancock Shaking Grate with Water Tubes.

OUR GOODS ARE OF THE HIGHEST GRADE, PERFECT WORKMANSHIP, AND BEST MATERIAL.

All Correspondence, Orders and Remittances should be addressed to

HARDWARE

The American Machinery and Trading Co., devoted to the domestic and export trade, and having agencies in principal cities throughout the world, have established their head office in New York City, and will be located at Nos. 266-267 West Street.

Duncan & Hatton, Center, Ind., intend adding to the general stock now carried by them a new Hardware department, which will include agricultural implements. They request that manufacturers and jobbers will forward catalogues, price lists, etc., of Hardware tools, cutlery, etc.

Chadborn & Coldwell Mfg. Co., Newburgh, N. Y., have made recent shipments of Lawn Mowers to Berlin, Vienna, Austria; and Milan, Italy. All have gone forward on steamer sailing February 3d; and they have other orders on hand for London and Australia, which will follow at an early day.

The Magnolia Metal Co., Nos. 266-267 West Street, New York, have recently opened a branch office in Atlanta, Ga., at No. 420 Austell Building. Preparations are under way to open branch offices in the near future in Philadelphia, St. Louis and San Francisco, the steadily increasing business developed by this progressive company, making it desirable that direct representation should be had in all the large cities.

A. H. Funke, of the late firm of Hermann Boker & Co., will continue under his own name, at the same address, Nos. 101-103 Duane Street, New York, the business of the Gun department, including Bicycle Sundries, formerly conducted by the firm of Hermann Boker & Co. He will assume all contracts and orders relating to the Gun department.

One of our large Western firms recently made a most exhaustive test of Babbitt Metals as submitted by a number of firms, the result being an order for two car loads of Babbitt Metal given Merchant & Co. Incorporated of Philadelphia, as their product stood highest in the test. This speaks volumes in favor of the high grade of Babbitt Metals manufactured by this firm.

The Walter W. Woodruff & Sons Co., Mount Carmel, Conn., recently purchased the entire Hardware and specialty manufacturing business of F. V. Wooster, Boston, Mass., including the patterns, tools and machinery, and patents pertaining to same, and intend continuing the manufacture of all such goods as may be desired by the trade. F. V. Wooster having recently issued a discount sheet dated January 1, 1900, this will be followed for the present on all orders for these goods.

On February 1, 1900, the firm of H. E. Hessler, Syracuse, N. Y., was changed to the H. E. Hessler Co. The company is composed of H. E. Hessler, D. S. Hessler, Chas. Tyler and Norbert T. Alletzhauser. D. S. Hessler is the son of the head of the firm. Charles Tyler and Norbert T. Alletzhauser have been trusted employees of Mr. Hessler for many years. The business will be carried on in the same lines as usual with some additions. The following are the officers of the new company: D. E. Hessler, president; D. S. Hessler, vice-president; Chas. Tyler, treasurer; N. T. Alletzhauser, secretary.

At the annual meeting of the stockholders of the Berlin Iron Bridge Co., held at the office of the company in East Berlin, Conn., on January 29th, the capital stock was increased to \$750,000. The following board of directors was elected: Chas. M. Jarvis, Frank L. Wilcox, S. H. Wilcox, H. H. Peck, Geo. H. Sage, D. E. Bradley and Seymour N. Robinson.

Manning, Maxwell & Moore, whose principal offices are at Nos. 85, 87 and 89 Liberty Street, New York, U. S. A., are engaged in compiling a new and important catalogue, which will be devoted exclusively to the elaborate illustration and description of iron working machine tools. This will afford an excellent opportunity for those manufacturers who have new tools that they desire to have illustrated in a catalogue published under such auspices, to immediately communicate with Manning, Maxwell & Moore at their New York office. By marking their communication "Catalogue Department" they will insure its receiving prompt attention.

A very handsome number of a trade publication was the January number of the *Plumbers' Trade Journal*. Printed on an extra quality of paper, calculated to display their advertising matter advantageously; with pages consecutively printed in several colors, making an exceedingly attractive display. Commendable enterprise is shown in the variety of its contents, and none more so than in giving the portraits of 200 of the travelers representing the Plumber's trade products, each portrait being numbered and provided with name and business address. They look like a fine looking lot of "the boys." The publication reflects great credit upon the publishers.

The firm of Hermann Boker & Co., Nos. 101-103 Duane Street, New York, consisting of Carl F. Boker and Albert H. Funke, general partners, and C. H. Alfred Boker, special partner, expired by limitation December 30, 1899. Carl F. Boker will continue the business of the firm in Steel and Metals, Cutlery and Hardware, as at present (and according to friendly agreement), under the old firm name of Hermann Boker & Co. Frederick Schumacher will continue to sign the firm name as heretofore. Hans R. Boker, Charles H. Hawkins and Charlester Meer, jointly, or any two of them, will also have authority to sign.

One of the most serviceable and attractive calendars of the holiday season, was that distributed by the Andrews Wire & Iron Works, Rockford, Ill., which consisted of twelve monthly calendar cards, on each of which was a pretty half-tone illustration of some masterpiece of Rosa Bonheur, the French artist. The cards were held in a pretty frame made of twisted wire in an extremely ornamental manner, the whole forming a very neat addition to the usual desk outfit.

H. D. Smith & Co., Plantsville, Conn., have been reorganized, and will hereafter be under entirely new management. The new officers are: Webster R. Walkley, president; W. D. Walkley, vice-president; L. V. Walkley, treasurer, and Edwin P. Hotchkiss, secretary. W. R. Walkley has resigned his position as manager of the New York branch of the Peck, Stow & Wilcox Co., and will hereafter reside in Plantsville, giving his entire time to the direction of H. D. Smith & Co.

HARDWARE

VOL. XX.

FEBRUARY 10, 1900.

NO. 9.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the
HARDWARE PUBLISHING CO., No. 143 CHAMBERS ST., NEW YORK.

Subscription, \$1.00 per year.

Subscription, Foreign, \$1.50 per year.

A. P. MITCHELL, . . . Secretary and Treasurer.

W. C. BRUNDAGE, . . . Business Manager.

HENRY HOPKINS, . . . Editor.

The Circulation of "Hardware" is Larger Than That of Any Other
 Paper in the United States Devoted to the Hardware Trade.

Editorial Trade Review.

Trade opens with unusual vigor and reports indicate a business greatly in advance of previous years, with less friction regarding differences in quotations than is usually the case at the opening of the year.

Retailers generally, following the natural trend of prices are marking up their stocks to correspond with the advanced quotations received by every mail, and which must be deemed to constitute a present cost, and be acted upon accordingly.

Stocks are being purchased by the trade generally with no speculation evident in the order; the desire being to have a good average stock for the wants of the trade, with no expectation that current prices will be still further advanced to make the profits of the current year approach the generous proportions of the year just closed.

It is the general feeling that goods which have been advanced too largely, under an apprehension that raw material would be unobtainable except at fabulous prices, will at some date not too remote, take a retrograde influence, in order to effect sales large enough to make the manufacturer feel he has good business. Many manufacturers have already caught up on the orders which so demoralized them last year; even the old orders that have been held back from delivery for fear of spoiling the eagerness of the market to receive the goods, are being rounded up in good shape, and in some factories a generously provided for surplus stock is presenting a front not in evidence for many months.

Prices, however, as yet show little if any weakness; the fear being prevalent should such a state of affairs prevail, the confidence of the merchants in the prosperous conditions underlying the increasing business of the present, would meet a revulsion, in which case, fears of the future would make a poor foundation on which to build the safe and generously developed trade anticipated by those sanguine leaders in our industry whose wish for prosperity's continuance should be "father to the thought."

Manufacturers who find their raw material still quoted at stiff prices without the slightest concessions, are buying charily unless for orders already booked at an arbitrary quotation.

Jobbers whose orders for an early delivery have already filled warehouses with lines of goods which the retailer needs two months later, are apt to hustle their salesmen into getting specifications from their custo-

mers, using the natural arguments which a possible scarcity later in the season will furnish.

The "boys on the road" are doing their best, and are sending home more orders than usual, but the big orders at halfway prices, so prominent a year ago, are conspicuous by their absence.

This condition of trade will be emphasized a month later, after the many conventions of Hardware dealers—so plentiful in the month of February—shall have met, and the members spoken their little pieces, confabbed with each other, and ascertained how generally absent the speculative feeling is in the channels of business. This will result in a careful ascertaining of actual wants, a conservative ordering of goods, to fulfil the requirements of the present, and eventually the excess in dollars and cents over the business of last year, with which they are all so fond of comparing, will be simply represented by the increased prices at which the stocks are bought and sold.

Money, however, continues in good supply. Failures are extremely few. Building operations assume unusual prominence, and "enterprises of great pith and moment" that have been temporarily suspended in operation, are again taken up and pushed rapidly toward completion.

Many lines in jobbers' hands were last year completely run out of stock, and these goods have been ordered in larger volume than usual in consequence. Some lines already this year, one of which is wire cloth and a popular product for the Spring trade has been marketed at even higher prices than were deemed possible, the supply in sight being about exhausted with numbers of orders yet to be placed.

The organized strength of the retail dealers is gradually claiming the attention of the manufacturers, whose products are distributed through their aid, and scarcely a convention will occur this month without some of the representatives of leading lines being present, and ascertaining from first hands just what methods must obtain in the future in order to meet the views and advance the present conditions of these loyal laborers in the vineyards of prosperity.

Our "Tenth" Anniversary.

On another page in this number will be found an official announcement having reference to the publication on April 10th of the "Anniversary Number" of *Hardware*, with which we give special prominence to the annually recurring commemoration of our birthday.

The appearance of so perfect a specimen of typographical excellence as our Anniversary Number, has invariably been regarded as a credit to trade journalism. The forthcoming issue will prove no exception to this expression of honest admiration, and we hope those of our friends naturally interested in the prosperity of their favorite trade paper will suggest any feature which may occur to them as worthy of the special attention we are glad to bestow under such encouraging auspices.

To our advertising patrons we offer an unrivalled opportunity for perfect artistic expression rarely enjoyed by those leading houses of world-wide fame, whose perfectly illustrated catalogues are the delight and admiration of the mercantile world.

A New Department.

We commence in this issue of *Hardware* a special department of "Legal Correspondence," which we hope will be appreciated by our subscribers and made use of by them when occasion offers.

It is frequently the case in ordinary business transactions that some legal complication arises of scarcely sufficient importance on which to found a law suit and its accompanying bill of expenses; when, if a simple question could be asked and answered in the inexpensive manner contemplated by our Legal Correspondence column, a decision could be made, and, in many cases, future litigation possibly avoided.

We have placed this column under the charge of a rising young member of the New York bar, who has made a study of this particular branch of mercantile and commercial law, and we hope it will be found useful to our many subscribers. All correspondence having reference to this department should be addressed to our office as noted at the head of the column.

The Philadelphia Commercial Museum.

A bill, which we give in full below, was introduced in the House of Representatives on December 5, 1899, by Representative Bingham, and was referred to the Committee on Interstate and Foreign Commerce, and ordered to be printed:

A BILL

To provide for adding to and completing specimens and productions, both natural and manufactured, of the United States and of foreign countries, to be exhibited in the Philadelphia museums for the purpose of increasing the trade of the United States.

Whereas there has lately been successfully held in the city of Philadelphia the first National Export Exposition occurring in the United States; and

Whereas it is expedient that the collections of the productions and the manufactured goods of the United States and other countries now in charge of said museums should be made full and complete, in order that the greatest national benefit in respect to foreign trade may be effected; therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the sum of two hundred thousand dollars be, and is hereby, appropriated, out of any money in the Treasury not otherwise appropriated, to the Philadelphia museums, for the purpose of completing the collection from foreign markets of samples of merchandise of the character in favor and demand therein, and of illustrating the manner in which merchandise for such markets should be prepared and packed, together with necessary business data concerning said samples and trade conditions abroad as will be of the most benefit to American manufacturers, merchants, and producers, and to aid and assist them in extending their trade with and in opening new markets in foreign countries: *Provided*, That the material so collected, together with all data that the bureau of information of the Philadelphia museums may obtain from its various foreign agents and from other sources, shall be distributed free to boards of trade, chambers of commerce, and other trades organizations throughout the United States, for the information of the American people in respect of the subject.

The objects so collected shall be deposited with and in charge of the said Philadelphia Museums, subject to free exhibition therein under proper rules and regulations for their safe-keeping.

The object of this appropriation is to enable the Philadelphia Commercial Museum to increase its facilities for the benefit of the American manufacturer and producer.

The work of the Institution has become so comprehensive that it is now serving all the principal American manufacturers of the United States with the latest news regarding commercial openings for their particular products in all parts of the world. Its reputation has become national, and its influence international. It is desired to make its usefulness more widespread, and to give commer-

cial information, without charge, to chambers of commerce and other trades bodies throughout the United States. That this object may be properly accomplished, it has been thought proper to ask for Government aid.

It is a work of great importance to every manufacturer and exporter in the United States, and this fact alone commends its efforts to obtain this substantial aid, to everyone having the commercial interests of this country at heart.

Our Country's Greatest Export Year, 1899.

Manufacturers were apparently the busiest people in this busy country of ours in 1899. They increased their importations of materials for use in manufacturing 33 per cent. over the busy year 1898, and actually increased their exportations of Manufactures nearly 25 per cent., so that the grand total of manufactures exported during the year reaches 380 million dollars, and seems likely to touch the 400 million dollar line in the fiscal year which ends June 30, 1900. The exports of manufactures, which in 1898 averaged 25 million dollars per month, averaged over 31 million dollars per month in 1899, or more than a million dollars for every day in the calendar year. Beginning with \$25,806,870 in January, 1899, the figures grew steadily until December showed \$35,652,053, December and March of 1899 showing larger exportations of manufactures than those of any preceding month in our history. Not only are the exports of manufactures in 1899 the largest in any year in our history, but they form a larger percentage of our total exports than those of any preceding year, the percentage being for the calendar year 1899 30.4 per cent., for 1898 24.9 per cent., and for 1897 25.9 per cent.

Taking the entire list of classes of articles composing our imports and exports, those relating to manufactures show the largest gains, both as to imports and exports. In imports, articles in a crude condition for use in domestic industries increased from \$199,255,687 to \$267,493,959, an increase of \$68,236,322; articles of food and live animals, from \$187,829,802 to \$229,971,385, an increase of \$42,141,583; manufactured articles ready for consumption, from \$104,804,809 to \$118,339,856, an increase of \$13,535,047; articles manufactured for use in the mechanic arts, from \$59,127,686 to \$75,376,005, an increase of \$6,248,319, and articles of voluntary use, luxuries, etc., from \$83,946,514 to \$107,664,366, an increase of \$23,717,852, the comparisons in each case being between 1898 and 1899. In domestic exports, manufactures increased from \$307,924,994 to \$380,787,891, an increase of \$72,862,897; products of the mine, from \$25,851,092 to \$33,279,187, an increase of \$7,428,095; products of the forest, from \$39,030,313 to \$47,562,121, an increase of \$8,531,808; and miscellaneous, from \$3,016,771 to \$3,532,663, an increase of \$515,892, while products of agriculture decreased from \$851,915,762 in 1898 to \$782,105,048 in 1899, a reduction of \$69,810,714, and products of the fisheries, from \$5,819,208 to \$5,637,077, a reduction of \$182,131.

The Hancock Inspirator Co.'s New General Office.

The Hancock Inspirator Co., manufacturers of the Hancock Inspirator, the Loftus automatic injector, injectors and general jet apparatus, has moved its general office and salesrooms from Boston, Mass., to Nos. 85-87-89 Liberty Street, New York City. The company requests that in future all correspondence, orders and remittances be addressed to their new location, as this will insure prompt reply and greatly facilitate the quick filling of orders. The Hancock inspirator and other goods enjoy an enviable reputation among steam users generally, and are of a universally high standard.

"Opporchunities," said Uncle Eben, "is pretty sho' ter come to ebry man. But it's a mighty good idee, jes' the same, foh him ter hustle roun' an' send out a few invitations.

LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law,
No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 143 Chambers Street, New York City.

QUESTION.—Some time ago a customer of mine asked me to accept his promissory note in payment of a debt he owed me of \$300. I told him I would accept the note if he obtained an endorser who was responsible. He said that his wife owned considerable property, and that she would endorse the note. The note was endorsed by the wife, and has since become due, and now remains unpaid. All the parties live in New Jersey. Can I collect the note from my debtor's wife if he is worthless?

REPLY.—If the note was endorsed by the wife solely as an accommodation, and she did not derive the benefit of the note, you could not hold her on her endorsement. Under the New Jersey law, a married woman cannot be held liable as an accommodation endorser of a note, where she derived none of the benefit of the note. Had you desired to bind the wife of your debtor as well as your debtor himself, you should have had the wife make the note and allow the husband to become the accommodation endorser.

QUESTION.—A short time ago I made a contract with a man, he agreeing to purchase a certain stock of goods from me. I have had dealings with the man before, and thought him responsible. I now find that he is not of age, although he looks like a man of twenty-five, and he has so stated his age to several people. He has refused to perform his contract, on the ground that he was not of age when he made it. Can I enforce the contract?

REPLY.—You cannot enforce a contract made by an infant. The fact that the infant may have represented himself to be of age, and that his appearance would indicate that he was of age, would not make him liable on his contract. If, however, the infant obtained money under false pretenses, he could be held responsible for his wrong, although not for his breach of contract.

QUESTION.—About seven years ago, I delivered goods to a man who lived in New York City. He left the city without paying me, and I did not hear from him for a long time. Is my debt outlawed—and if so is there any way to make it good again? I understand that my debtor moved to Rochester, N. Y., where he still resides.

REPLY.—The statute of limitation on all simple contracts in the State expires in six years from the accrual of the action. A debt outlawed by the statute of limitations, may be revived by an acknowledgment of the debt by the debtor, and his promise to pay the same, in writing.

QUESTION.—Some time ago I entered into a partnership with two other men. Articles of co partnership were drawn up and executed by all three of us. The partnership was not to continue for any special length of time. I should like to know how I can withdraw from the partnership, as I do not care to remain a partner any longer.

REPLY.—A partnership at will may be dissolved at any time by the withdrawal of any partner, whenever he so elects, without incurring any liability to his co-partners for such withdrawal; but if the right is exercised in bad faith, with a view to the appropriation of expected profits, or to obtain some other unfair advantage, the Court would interfere to effect an equal adjustment between them. If you are acting in good faith, notify your partners that you withdraw from the partnership and notify your customers of your withdrawal.

The longest bridge in the world is said to be the Lion Bridge, near Sangang, in China. It extends five and a quarter miles over an area of the Yellow Sea, and is supported by 300 huge stone arches. The roadway is 700 feet above the water, and is enclosed in an iron network. A marble lion, 21 feet long, rests on the crown of each pillar. The bridge was built at the command of the Emperor Keing Long.—*Exchange*.

The "Man in the Corner" Moralizes While in the Mood.

Of all the undeveloped industrial resources of the country, by far the greatest, so it seems to me, lies in the latent ability of the ordinary people with whom we touch elbows in our daily walk and work, and I think we should have a greater appreciation of this fact if we were not so wont to judge others by their outward semblance or the positions they occupy. "Worth makes the man, want of it the fellow," we say, but too often worth hides itself under an unpretentious exterior and goes unrecognized, and even the possessor of talent, in the face of the general disbelief of his being anything out of the common doubts his power if he ever dreams that he has it. Particularly is this true of men whose work is of a routine nature, for we are prone to measure a man's ability by his daily performance.

There are abundant outcroppings to prove the existence of this hidden wealth. I have been told that of the patents granted by the government, by far the larger number are issued to workmen or their assigns, and that nearly all the improvements in mercantile processes originate with the men upon whom the burden of the detail falls. Every man of ability, no matter what his station, who occupies a position until its duties are performed mechanically, finds his mind occupied by other things, and it is then that his real value is determined. If he is the right man for the place, he will evolve improvements in his work; if not, his attention will naturally turn to the things in which he has a greater interest, and retrogression begins. So it is that by natural selection the best men forge to the fore in any institution where results are prized and the right conditions prevail.

The Necessity of Carrying Fire Insurance.

Whenever a merchant finds that his business will not justify his paying premiums for fire insurance he had better give up business.

The question of carrying fire insurance is a matter of great importance to the creditor, for in some cases there is not sufficient insurance carried, while in others we find merchants carrying no fire insurance whatsoever. The attention of all such traders should be directed to this all-important question.

In the first place a merchant injures himself by not carrying insurance, for he will certainly find that it will operate against him to the extent of curtailing his credit. It is a duty he owes himself as well as his creditors, and under no circumstances should he overlook it, or fail to fulfil it.

There are frequent instances where a merchant has sufficient capital, but is owing for merchandise for which he can pay in the usual course of business, but he has been so remiss as to carry no insurance, and consequently, when visited by fire, he not only loses all he possesses, but also causes a loss to his creditors. It will, therefore, be apparent that he has not only committed an act of injustice toward himself, but to those who have reposed confidence in him to the extent of giving him credit.

When a credit man is passing upon an application for credit he should make it a point to thoroughly investigate the question of insurance carried by the would-be customer, and in the event of his finding that there is no insurance carried he should not hesitate to decline the risk.

A merchant has the following advantages through carrying fire insurance:

First—It assists him in obtaining credit.

Second—He protects himself in case of fire.

Third—He protects his creditors, as he is enabled to pay what he owes in the event of his being visited by fire.

THE PAN AMERICAN EXPOSITION, 1901.

The Court of the Machinery and Transportation Building of the Pan American Exposition, which will be held at Buffalo, N. Y., on the Niagara Frontier, during the summer months of the year 1901, presents an interesting treatment of cloister work. The Machinery and Transportation Building itself forms a hollow square, with this Court in its center. It is 200 feet long and 100 feet wide, the east and west ends opening respectively to the great entrance from the Grand Canal and the Court of the Fountains, while the great exhibiting rooms of the Mall side of the building, and

This Building and Court have been designed by Green & Wicks of Buffalo.

New England Hardware Dealers' Association.

The annual meeting of the New England Hardware Dealers' Association will be held at the United States Hotel, Boston, on Wednesday, February 14th, the business meeting taking place immediately after the customary dinner, at which time officers will be chosen for the ensuing year. William Chamberlain, of the Emery-Waterhouse Co.,

THE COURT
MACHINERY AND TRANSPORTATION BUILDING
PAN-AMERICAN EXPOSITION, BUFFALO, N. Y.
COPYRIGHT, 1899, BY PAN-AMERICAN EXPOSITION CO.

the two exhibition rooms and a great entrance court from the Court of the Fountains side of the building, lie on either side. Along each side of this Court, and extending the entire length, are roof-covered arcades under which the visitor may find rest on the comfortable benches.

The pool itself is 175 feet long and 27 feet wide. It is placed in the center of the Court. The bank is sodded and planted on all sides, forming a pleasing frame or border effect; the water is low so as to receive the reflection of the growth around the pool.

The fountain is an important feature, placed in the center of the pool, and giving life to the scene and freshness to the atmosphere. Throughout the Court are pleasant walks and paths, bordered with low-growing shrubbery and plants, and at intervals at axis-points with the arcades, rare plants are placed in great vases, making a truly architectural landscape effect. The entire scheme gives the effect of an admirable enclosure of a mission cloister, and is planned as one of the many little oases for the refreshment of the weary sightseer.

Portland, Me., will be the principal guest of the evening, and will speak on the subject of "Competition in Trade." All the members of the Association it is expected will add their experiences, and deliver short addresses on the subject, as well as upon that of "The Advance in Prices and Its Effect on the Hardware Trade." A committee was appointed to nominate officers for the ensuing term, consisting of Samuel H. Thompson, Lowell, and Hiram G. Janvrin and Anthony S. Morss, Boston. The entertainment committee having in charge the arrangements of the evening are: George J. Mulhall, William H. Warren and Henry M. Sanders, all of Boston.

An experience, extending over many years in soliciting advertisements, has taught me that the securing of a contract is not so difficult a matter as is the obtaining of proper copy to occupy the space contracted for. I do not know if the advertiser thinks his part of the work is done when he signs the contract, but in a great many cases, it certainly would seem so.—*Machinery Advertising.*

Nicholson File Co. Purchases Another Plant.

The Eagle File Co., formerly the Madden & Cockayne File Co., of Middletown, N. Y., passes into its hands.

The following circulars just received from the office of the Nicholson File Co., of Providence, R. I., and the Eagle File Co., of Middletown, N. Y., are self-explanatory. The purchase has been under negotiation since January 1st, and was consummated on the 18th.

OFFICE OF THE EAGLE FILE CO.

MIDDLETOWN, N. Y., January 18, 1900.

GENTLEMEN: We have transferred our real estate, plant, machinery, good will, stock of goods, etc., to the Nicholson File Co., of Providence, R. I., who will continue the business, assuming our unfilled orders, and to whom all accounts due us will be payable.

All accounts against this company contracted since December 31, 1899, will be paid by the Nicholson File Co. All contracted on or before that date will be paid by F. M. Madden, at Middletown, N. Y.

We extend to all our customers our thanks for the patronage which they have accorded us, and assure them that they cannot better serve their own interests than by transferring to the Nicholson File Co. the business with which they have favored us.

Respectfully yours,

EAGLE FILE CO.,

W. K. Stansbury, President.

OFFICE OF THE NICHOLSON FILE CO.

PROVIDENCE, R. I., January 18, 1900.

GENTLEMEN: Having this day become the owners and assumed the management of the Eagle File Co., of Middletown, N. Y., we shall continue the manufacture of their old and well-known brand, and assure the trade who are now selling these goods, and the consumers who are using them, that their good qualities shall not diminish under our care. In fact, our well-known reputation guarantees this. We solicit the continued patronage of all those who have handled the Eagle files, and promise them that their business shall receive our prompt, careful and courteous attention.

All invoices will hereafter be made out by this company, and all unsettled accounts due the Eagle File Co., should be remitted to our address at Providence, R. I.

Yours respectfully,

NICHOLSON FILE CO.,

Sam'l M. Nicholson, President.

This acquisition, it is claimed, enables the properties of the Nicholson File Co. to produce a total of approximately 7,000 dozen or 84,000 files and rasps per day.

"Can Such Things Be."

The business manager of one of the largest importers of American machinery abroad, while in this country a short time ago placing orders for American tools, felt called upon to sound the following note of warning:

"I would like to give a word of warning to American manufacturers. When machine tools made in the United States were first largely introduced into the European markets the quality, finish and general appearance of the machinery was undoubtedly exceptionally good. Now, however, in many cases, the castings are not properly cleaned, the workmanship is not up to the uniform standard, poor iron is utilized, and, in short, such a condition is tending to undo much of the good reputation which the American ingenious labor-saving devices had first acquired. Naturally the Germans, with their aptitude to seize on all opportunities to foist their wares on foreign markets, are taking advantage of the American neglect of fields which could be controlled by your manufacturers—for the asking, you might say. My house has now orders on hand with American firms for close on \$700,000, and I am placing contracts for \$800,000 more."

Although this complaint has frequently been made in the past regarding our goods, at a time when we were indifferent as to the future of any trade to be built up abroad; it seems scarcely possible it could be part of any lax policy now when our export trade has assumed such generous proportions, and our reputation for superior mechanical skill is becoming world-wide.

The Year's Foreign Commerce of United States.

No feature of the marvellous growth of our foreign commerce is more striking than that relating to exports of iron and steel. The total foreign commerce of the United States in the year just ended has for the first time crossed the two billion dollar line, and the total exports of manufactures of iron and steel have for the first time crossed the one hundred million dollar line. In the calendar year 1890 the total exports of iron and steel amounted to \$27,000,000, and in 1899 they were \$105,689,645. Meantime the importations of manufactures of iron and steel have decreased with nearly equal rapidity, the importations of 1890 being \$44,544,140, and those of 1899, \$15,799,206.

One especially striking feature of this rapid growth in our exportations of manufactures of iron and steel is the fact that European countries are taking largely from us in those lines. In builders' Hardware, for instance, the United Kingdom took nearly two million dollars' worth in the year just ended, Germany more than one million dollars in value, France \$338,857, and other European countries \$965,935. Of sewing machines, the exports to the United Kingdom were \$1,285,609 in 1899, against \$892,654 last year; to Germany, \$846,034, against \$806,401 in the preceding year; to France, \$109,269, against \$89,117 in the preceding year, and to other European countries \$235,462, against \$164,229 in 1898.

For new and ingenious machinery the world seems now to be looking to the United States. Exports of electrical machinery increased from \$917,453 in 1897 to \$2,523,644 in 1898, and \$3,143,336 in 1899; metal-working machinery, from about four million dollars in 1897 to nearly seven millions in 1899; railway engines, from three million dollars in 1897 to nearly five millions in 1899; typewriting machines, from \$1,566,916 in 1897 to \$2,776,363 in 1899, while such lines of machinery as cash registers, laundry machinery, printing presses, shoe manufacturing machinery, and fire and stationary engines also show a marked growth.

The following table shows the exports of leading classes of manufactures of iron and steel in the calendar year 1899, compared with those of 1889:

	1889.	1899.
Machinery	\$3,222,904	\$37,064,168
Builders' Hardware.....	4,052,136	8,043,530
Steel rails.....	279,485	6,122,382
Wire	679,969	5,526,030
Locomotive engines	1,586,746	4,767,850
Sewing machines.....	2,575,539	4,103,828
Pig iron	227,048	3,252,241
Plates and sheets.....	32,720	2,047,301
Wire nails and tacks.....	160,313	1,955,773
Castings	432,621	1,348,133
Steel bars	not stated	1,038,336
Printing presses	277,800	1,037,644
Firearms	9,220	892,620
Other engines	216,346	516,787
Scales and balances.....	335,456	487,113
Cut nails	282,452	482,882
Cutlery	105,945	252,156
All other articles	3,327,799	25,818,671
Total exports iron and steel.....	\$23,712,814	\$105,689,645

The following table shows the increased production of pig iron in the United States, and the corresponding increase in exports from, and decrease in imports into the United States of iron and steel and their manufactures in each calendar year from 1880 to 1899:

	Pig iron Production.	Iron and Steel manufactures.	
		Exports.	Imports.
1880.....	3,835,191	\$15,422,874	\$63,956,853
1881.....	4,144,254	18,421,402	46,668,170
1882.....	4,623,323	22,866,701	68,715,639
1883.....	4,595,510	28,626,732	48,714,207
1884.....	4,907,868	19,299,805	37,078,122
1885.....	4,044,526	16,622,511	31,144,552
1886.....	5,683,320	14,865,087	41,300,779
1887.....	6,417,148	16,235,022	51,420,607
1888.....	6,489,738	19,578,483	42,311,681
1889.....	7,603,642	23,712,814	42,027,742
1890.....	9,202,703	27,000,134	44,544,140
1891.....	8,279,370	30,735,507	41,003,620
1892.....	9,157,000	27,000,862	33,572,877
1893.....	7,124,502	30,150,363	20,056,530
1894.....	6,457,388	29,043,729	20,841,570
1895.....	4,446,308	35,071,563	25,772,136
1896.....	8,623,127	48,670,218	19,500,576
1897.....	9,652,680	62,737,250	13,335,050
1898.....	11,773,934	82,771,550	12,474,572
1899.....	13,620,703	105,689,645	15,799,206

The largest beef and pork-packing house is in Chicago.

PHILADELPHIA HARDWARE BANQUET.

FOURTEENTH ANNUAL DINNER OF THE HARDWARE MERCHANTS' AND MANUFACTURERS' ASSOCIATION OF PHILADELPHIA.

The Hardware Merchants' & Manufacturers' Association of Philadelphia participated in the fourteenth annual banquet at the Continental Hotel, Philadelphia, on January 25th last. One hundred and fifty were present, and the banquet hall was handsomely prepared for the reception of the members of this important Association, and in addition to the usual decorations found upon similar festivities, the tables were also supplied with souvenirs of numerous Hardware specialties, which were presented by well-known firms, the representatives of which participated in the enjoyment provided for all. Among those who presented the souvenirs may be mentioned the G. & H. Barnett Co., the Enterprise Mfg. Co. of Pa., North Bros. Mfg. Co., McCaffrey File Co. and several others. An excellent menu was provided for the delectation of the diners, and every evidence was given that the discussion of the same was enjoyed to the fullest extent.

James H. Ritter, the retiring president, called the company to order, and made an address of considerable interest, which was listened to attentively. His successor in the presidential chair, Hugh McCaffrey, followed with a short speech, in which he referred to the history of the Association and the efforts that had been made by it to advance the interests of the foreign trade, dwelling in particular not only upon the excellence of the goods which were produced in the factories of Philadelphia, but alluded in the most gratifying manner to the educational facilities of the Franklin Institute and the manual training schools, in which, as he stated, "may be found the source of its future mechanics and skilled manufacturers, who are to upbuild and increase its interests." During the continuance of the entertainment, President McCaffrey acted as toastmaster, and the usual speeches that form a feature of such an affair were alternated with some fine vocal efforts on the part of the singers present.

Mayor Ashbridge responded to the toast "Our City; Its Growing Commercial Importance." He made a very interesting speech, in which he referred to the progress that had been made by the Philadelphia manufacturers, and the large trade that had resulted therefrom. Other speakers who followed, expanded on this line of glorification, in which Philadelphia was held up for its manufacturing capabilities and its future well being.

Alfred C. Rex spoke on "Expansion," and William C. Peters made an interesting address on "Retrospection," illustrating it by quotations from old invoices dating back even to the last century, making quite an interesting little speech, showing the most important way of the progress of developing trade by Philadelphia manufacturers and merchants.

Charles Z. Tryon spoke on "Prosperity," and made an excellent speech, and T. James Fernley, the jovial secretary and treasurer of the Association, made a characteristic address, which was filled with wit and good humor, for which he is always noted, which he wound up by presenting to the retiring president, an extremely handsome gavel, the head of which was manufactured from wood taken from the battleship *Maine*. This was bound with gold, on which was engraved the following inscription:

"Presented to

Jas. H. Ritter, President

Hardware Merchants' and Manufacturers' Association,
January 25, 1900."

George H. Sargent, president of the Hardware Club of New York, was called upon for a few remarks, and H. B. Lupton, of the American Steel & Wire Co., made an interesting address, which was fully enjoyed by all present. He was followed by R. R. Williams, Hardware editor of the *Iron Age*, who held the attention of those present with an interesting address.

We would not do justice to the above affair did we omit to mention that among the popular songs contained on the menu was the following original one from the pen of James

JAMES H. RITTER.

H. Ritter, the retiring president. It was a surprise to many to know that the poetic element was so largely developed in one whose every-day life possesses so little of the inspirational quality.

SONG OF THE HARDWAREMAN.

Gay to-night are our faces,
Gayer the hearts within;
For we've cast off the traces
Of trade and rush and din.

Chorus.

Sing, sing together,
With voices and hearts in tune;
Sing, sing together,
For our cares return too soon.

To Hardware we are devoted,
And our talk is of locks and nails;
But still our thoughts as noted
Outrun our books and sales.

Chorus.

With discounts we've much to do—
Five tens and ninety are fine;
But most when that dear little two
Appears at the end of the line.

Chorus.

What though the years are flying,
And sprinkling our heads with grey;
Our hearts hold youth undying,
So we'll be boys while we may.

Chorus.

✱

"I come to steel," said the humorous rat.

"Pleased to welcome you," replied the matter-of-fact steel trap, as it sprang to embrace the new comer.—*Ex.*

PACIFIC RETAIL HARDWARE ASSOCIATION.

The Pacific Retail Hardware Association held its second annual meeting in the commodious Knights of Pythias Hall, Chico, Cal., on Wednesday and Thursday, January 17th and 18th. As is customary with most conventions of this character, the first day was devoted to executive sessions of all the members, during which many subjects were discussed of considerable importance to the trade.

On Wednesday, the president, John C. White, called the meeting to order at 10 A. M.

After the minutes of the last meeting had been read and approved, President White delivered his annual address, in which, among other matters, he referred to the fact that in order to secure their just rights as retailers of Hardware, machinery, vehicles, etc., and to establish proper and definite relations with manufacturers and jobbers, it was an important thing for the Hardware merchants of the State to organize for the general welfare of the trade. He spoke of the necessity of infusing more vigor into their work in order to ratify what had been accomplished in the past year, while at the same time plans were made for greater influence in the future, and he concluded by hoping that the members of the Association would find their deliberations of a wise and harmonious nature so as to redound to the credit of the Association, promoting peace and good will among all. His address was listened to with interest by those present. This was followed by the reports of the secretary and treasurer, which were received and ordered placed on file. The executive committee then made the following report:

REPORT OF EXECUTIVE COMMITTEE.

Your executive committee, in making a report to you, wish first to express their appreciation of your loyalty to the work we have undertaken. You put your confidence in us by electing us to the executive board, and as members during the first year of your organization we have found you obedient to our calls and faithful to the organization. You selected us to represent you in the demands you might wish to make and expected us to protect your interests, as well as be fair and just to the interests of others. It has been our aim to meet your expectations, and how far we have succeeded we will have to leave for your determination.

We feared at the outset that the work we had undertaken would be laborious and of a disagreeable nature; that the complaints would be many and that we might not be able to settle them without the regular course of trial. We congratulate ourselves that such has not been the case, and that we have found our work a pleasure instead of labor. It has brought us in contact with pleasant and congenial gentlemen, both among our members and those interested who belong to the wholesale trade. We are pleased that we have been able to settle all grievances between parties without the regular course of trial. We have found our members who were aggrieved liberal in their views, and willing to look on both sides of a question, willing to waive any little injury that might have been done them individually for the purpose of accomplishing a general result.

We have also found those in the wholesale trade, of whom complaints were made, ready to investigate to determine the wrong done, and anxious to correct any violation of the established rules of trade. These admirable traits have made our work for the year much easier than we had anticipated.

The executive committee, upon its organization, immediately after adjournment of our first annual meeting, entered upon its first work, that of printed matter for distribution. We sent to each of you the constitution and by-laws adopted by you, in a neatly printed form. We also distributed them to all dealers in Hardware in the State for the purpose of increasing our membership.

The result of efforts in this way is shown by the secretary's report. While it did not increase our membership as much as we desired, yet from all parts of the State, and the State of Nevada, we have received encouragement and warm moral support.

Your committee also issued a circular letter of date January 28, 1899, copy of which we mailed to each of you. In that letter we expressed the views of what we thought should be observed by the wholesale trade, and in order to have more fully expressed opinions this letter brought about a meeting between the principal wholesale trade of San Francisco and Sacramento and your executive committee, which was held in Anvil Hall, San Francisco, February 10, 1899. The conference was well attended, Mr. Hayden, of Dunham, Carrigan & Hayden being elected to preside, while Mr. Smith, secretary of the Jobbers' Association, acted as secretary.

The results of this conference were no doubt of much good to the individual members of this Association. While we did not get everything asked for in our letters of January 28th, yet we got much that we had not had before. Our letter of March 4, 1899, to our members, copies of which you have had, fully stated what we were promised, and we are glad to report that differentials in prices and classification of customers agreed upon continues in effect, and we are sure has been beneficial to the members of this Association.

Our work during the last few months of our term has been light, not but there is a great deal to accomplish, but perhaps owing to the greatly-disturbed conditions of trade, each of you has been occupied in looking out for the many changes, and has let smaller disturbances alone.

At a meeting of your executive committee held in Marysville about November 21st, a programme was adopted for this meeting, selecting such objects as they thought might mostly interest you; not, however, in any way attempting to bar you from any subject you might wish to bring before this Association.

The wholesale trade has also been invited to be present on the second day of our meeting, that each of you might exercise the same privilege as your executive committee, that of meeting in proper discussions those whom we have found to be generally disposed to be just and fair. Your committee feel greatly pleased with the spirit in which they have been met by the wholesale association, and the very few complaints which have been lodged by the members testify to the fact that the idea of a proper appreciation of each other's rights has prevailed and been in practice to a greater extent than formerly.

On January 15, 1900, this committee received the resignation of J. M. Berry as secretary of this Association, he having terminated his connection with the retail trade. The resignation was accepted, and R. W. Boyd, member of Hampton Hardware Co., of Marysville, was chosen by us to fill this vacancy in accordance with Article 14 of our constitution and by-laws.

The committee regrets very much to part with Mr.

Berry, as he has been a faithful and efficient member of the Association.

At a meeting held in Chico, November 25th, a committee of entertainment was appointed to look after your welfare at this, our second annual meeting. The members residing in Chico were selected, and into their hospitable hands we have delivered you.

Faithfully submitted.

JOHN C. WHITE,	} Members of Executive Committee.
OSCAR C. SCHULZE,	
JOHN SIMPSON,	
ELAM BIGGS,	
ROBERT W. BOYD,	

After the reading of the address of the executive committee, an adjournment was taken until 1:30 P.M. The afternoon session was devoted to discussing a number of questions that agitated the Hardware trade in the State, in which uniform prices, the inroads made by catalogue houses, the question of case and cartage and other matters were brought up and caused considerable discussion. Finally it was left to the executive committee to use their own judgment, having full power to act, believing that some method would be found to correct some of the evils and abuses which so annoyed the trade. The question of differential rates was a matter in which considerable interest was taken, and the following resolution was offered by Geo. A. Legg regarding the same:

Resolved, That we, the members of the Pacific Retail Hardware Association, do hereby agree, one with the other, to adhere strictly to the differential rates as established by the various associations, and do adopt these as a minimum, plus freight, to our respective places of business."

This resolution was adopted.

After the selection of Woodland, Cal., as the place for holding their third annual meeting, the following officers were chosen to hold office for the ensuing year:

President, John C. White, of White, Cooley & Cutts, Marysville, Cal. (re-elected).

Vice-President, Oscar C. Schulze, of Eppinger & Co., Dixon, Cal. (re-elected).

Treasurer, William Earll of Hubbard, Earll & Co., Chico, Cal. (re-elected).

Secretary, Robert W. Boyd, of Hampton Hardware Co., Marysville, Cal.

Executive Committee: Geo. A. Legg of Legg & Schaw Co., Nevada City, Cal., and G. A. Gutman of Hochheimer & Co., Germantown, Cal.

An auditing committee of three was appointed, after which an adjournment was ordered until Thursday morning at 9 A.M.

At the assembling of the Association on Thursday morning the representatives of many manufacturers and jobbers of San Francisco and Sacramento, in pursuance to invitation previously extended to them, met with the convention. The following gentlemen were among the guests on this occasion:

Brace Hayden, president of the Pacific Coast Hardware and Metal Association

William R. Wheeler, chairman of the Traffic Committee.

H. D. Loveland of the Associated Grocers' Association.
Wakefield Baker of the Benecia Agricultural Works and the firm of Baker and Hamilton.

A. C. Rulofson of Baker & Hamilton, San Francisco, Cal.
John D. Sibley of Deere Implement Co., San Francisco, Cal.

A. L. Scott of Miller, Sloss & Scott, San Francisco, Cal.
A. A. Watkins of W. W. Montague & Co., San Francisco, Cal.

William Schaw of Schaw, Ingram, Batcher & Co., Sacramento, Cal., and others.

The question of graded rates, carload differentials, etc. which now form the contention between the Middle West jobbers and manufacturers and those of the Pacific Coast, were regarded as being of the utmost importance to all concerned, and in the discussion which followed was participated in by many of those present, in every phase, both from the retail point of view and also from that of the manufacturers and jobbers, receiving the closest attention.

The following resolution was introduced by Vice-President Oscar C. Schulze:

Whereas, We recognize that the interests of the producing, manufacturing and commercial communities, both wholesale and retail, of the Pacific Coast are so indissolubly bound together and dependent upon one another that any condition which works a hardship upon one of these interests must necessarily, either directly or indirectly, bring hardship upon the others; be it

Resolved, That we, the Pacific Retail Hardware Association, in annual meeting assembled, do hereby express our satisfaction with the present existing transcontinental railway tariff principles and conditions in this State, and desire to place on record our satisfaction with the differentials and schedules that have been in effect since June, 1898, and that this association will do its best to uphold these differentials, and trust the efforts of the manufacturers and wholesale merchants of the Coast will be successful in maintaining them.

The Association then went into executive session and carried the resolution unanimously. Upon re-assembling, the representatives from the jobbers and manufacturers rejoined the members of the convention, and when the President announced the result of the vote it was received with approval by all present. This concluded the proceedings of the convention, and a motion to adjourn followed. The representatives present were all invited to a banquet given at the Park Hotel in the evening on the invitation of the entertainment committee, which consisted of A. L. Nichols, William Earll, L. L. Hubbell and J. A. McFeeley, all of Chico. A number of leading citizens of the town were included among those who were present on this interesting occasion. A very pleasant and enjoyable evening was passed, and every evidence given by the members present of the pleasure they experienced from participating in the proceedings.

Iowa Retail Hardware Dealers' Association

In addition to the urgent appeal made by the indefatigable secretary, Mrs. Henrietta E. Kupper, of the Iowa Retail Hardware Dealers' Association in the following, she follows up her circular work by a tour through the county seats of the State. She reports having added fifty new members to the Association, which she felt confident could only be obtained by personal solicitation. She had already sent this appeal to every dealer in Hardware throughout the State:

You are cordially invited to attend the Second Annual Meeting of the Iowa Retail Hardware Dealers' Association, which will be held in the city of Des Moines, at the New Auditorium, on Wednesday, Thursday and Friday, February 14, 15 and 16, 1900.

This meeting promises to be excellent, as matters of general interest and importance to the Hardware trade, and not heretofore considered by the Association, will come up for discussion and settlement.

A large attendance of Hardware men from all parts of the State, as well as from other States, is assured. It is a good thing to meet together and discuss matters pertaining to the business, in which every Hardware dealer is vitally interested.

The programme committee is making a special effort to make our stay in Des Moines a pleasant one, and you will never regret the time and money spent in attending this meeting, as it is expected that much interest and profit is in store for those who avail themselves of the opportunity thus offered. The matter of department stores and catalogue houses will come up for discussion and consideration; also a question box will be an important feature of this meeting.

If you are not now a member of the Association we trust that you will soon become one, and assist in promoting the good work which the Association is carrying on.

Special rates will be granted on all railroads to those who desire to attend, and also reduced rates at Hotel Savery. We hope to see you there.

Ohio Hardware Association.

The Ohio Hardware Association, which holds its annual convention in Cleveland on February 28th and March 1st and 2d, is looked forward to with the greatest interest by the Hardware trade of the State, and promises to be the most successful affair of the kind in its history. It will be held in the Chamber of Commerce, which possesses ample accommodations for a successful issue, and as already announced, an important committee on entertainment, which includes the leading manufacturers and jobbers of Cleveland, has been appointed, backed up by a liberal fund, who will leave no stone unturned to provide a feast of good things to make the occasion forever memorable.

From John F. Baker, the enterprising Secretary and Treasurer, we learn the programme will be about as follows:

Wednesday, February 28th.

Executive Committee Meeting, 10:30 A. M.

Convention Called to Order at 2 P. M.

Roll Call of Members.

Reading of Minutes.

President's Address.

Report of the Secretary.

Recess for Payment of Dues.

Report of Committee on New Constitution.

Appointment of Committees.

Half-hour Class and Experience Meeting.

Adjournment.

Second Day, March 1st, 9 A. M.

"Words of Welcome" to New Members by an Old Member.

Papers on "Relation of Expense to Profits."

Paper on "Stock Taking and Dead Stock."

Opening of Question Box.

Discussion of Questions.

Second Day, 2 P. M.

Question Box Continued.

Reports of Committees.

Unfinished Business.

Election of Officers.

Selection of Place for 1901 Meeting.

Adjournment.

On Wednesday evening, February 28th, will occur a social reception, to be given by the local dealers, affording members an opportunity to renew acquaintances and to meet new members. The occasion is to be enlivened by some of the best musical talent in the country. On Thursday evening the Association will hold its regular annual banquet.

North Dakota Retail Hardware Association.

There is every probability that the coming annual gathering of the North Dakota Retail Hardware Association, which takes place at Fargo, February 21st and 22d, will be one of the most important conventions they have ever held, and be more largely attended. We are advised by C. N. Barnes, of Grand Forks, the indefatigable secretary of the Association, that every effort has been made throughout the State to bring together the merchants desirous of joining the Association and participating in the good work which is conducted through the organization. Applications are coming in daily from those who previously paid but little attention to the importance to be derived from Associations of this character, so that it is felt there will not be a single county in the State where a Hardware dealer of any importance can be found, that will be unrep-

resented in the convention. Arrangements have just been completed with the railroads for reduced rates and the arrangement of the programme for this meeting will be very similar to past years, except that it will occupy two days. Headquarters will be made at the Waldorf, and the sessions of the convention will be held in the Loyal Knight Hall. The executive committee will hold a meeting at 10:30 A. M. in the rooms of the Waldorf. The meeting proper will be called to order promptly at 2 o'clock, in the Hall.

We are indebted to the hardworking secretary of the association, C. N. Barnes, for the following programme of the proceedings:

WEDNESDAY, FEB. 21, 1900.

10:30 A. M.: Meeting of Executive Committee at the Waldorf.

AFTERNOON SESSION, 2 P. M.

Payment of dues.

Address of welcome, by Mayor Johnson.

Response, by Vice-President Allen of Jamestown.

Roll call.

President's address.

Secretary's report.

Treasurer's report.

Appointment of committees.

Press, Transportation, Nominations, Auditing, Resolutions.

Question box.

Enrolling of new members and payment of annual dues.

Adjournment.

THURSDAY, FEB. 22, 1900.

Payment of dues.

9 A. M.: Report of Nominating Committee.

Election of officers.

PAPER—"Some Wrongs Which Need Righting."

H. N. JOY, Hamilton.

PAPER: "The Effect of Department Stores on the Hardware Trade." - - - H. S. DIESEM, LaMoure.

PAPER: "Some Observations about Expansion."

G. W. WOLBERT, Casselton.

PAPER: "The Country Retailer's Superior Advantages in Trade." - - - W. H. PINKERTON, Lakota.

PAPER: "Competition." H. F. STRETHLOW, Casselton.

Payment of annual dues.

Adjournment.

2 P. M., for members only:

Reports of committees.

Question box.

Discussion.

Good of the Association.

It has been intimated by a number of manufacturers and jobbers that they desire to have representatives on hand at the convention. This is in harmony with the desire on the part of the dealers to enjoy closer relations with the manufacturers and jobbers from whom the bulk of the supplies are obtained, and it is pleasing to know also that the manufacturers to a greater extent than usual are prepared to be present at these gatherings, realizing how important a bearing it may possibly have on the business of the future.

Wisconsin Retail Hardware Association.

The fourth annual convention of the Wisconsin Retail Hardware Association was held at Milwaukee, February 7th and 8th, the delegates assembling at the Republican House.

The opening session was called to order at 2 o'clock Wednesday afternoon by the president, James Montgomery. The attendance of the members and the interest taken in the proceedings far surpassed any previous convention held by the Association.

Mayor Rose welcomed the delegates to the city in a pleasing speech, which was responded to by President

Montgomery, who afterwards delivered his annual address, which was of an exceedingly interesting character, and listened to attentively by those present. The remarks of A. H. Sheldon, vice-president, Janesville, and ex-president John Hughes, Fond du Lac, followed, and committees were appointed on the various matters that it was intended to bring before the convention for action as well as resolutions, grievances, reception, auditing, etc.

Secretary Peck, Berlin, then made his annual report, which was a very able one, and conveyed a good idea of the amount of labor that devolves upon this particular office. He said among other things:

In presenting my third annual report to our fourth meeting, I am glad that I can present so favorable a one, which is not so much due to your secretary as to the hearty co-operation of the officary and membership.

The past year has been as good as any that have preceded it, and better than some of them. I would take this opportunity to thank the membership for their forbearance and co-operation during the entire year. If there has been any fault-finding it has not come to my ears. * * *

Our membership is 271, a net increase of 72 during the year, as we have received 85 new members and dropped eight for non-payment of dues, two as jobbers, and three have sold out. There are now only 22 members who are in arrears, and when you notice some States report unpaid dues up into the hundreds of dollars our \$44 looks very encouraging. It seems as though our members were in earnest.

Our record reads, on members, 1897, 40; 1899, 199; 1900, 271.

Our financial exhibit will read about like this: 1897, 00; 1900, \$440, and no debts. Surely we should feel encouraged. * * *

Within the last few weeks a move has been made in Iowa toward forming a National Association, which shall be wide enough in its scope to take in every retail association formed. This matter will come before you at the present session for your action, and it seems to me to be desirable that such a move may be successful.

The treasurer's report followed, and a number of papers were presented to the convention by the following members of the Association: H. L. McNamara, Janesville, on "The Relation of Traveling Men to the Retailer from Experience"; and Robert Suettinger, Two Rivers, on "How I do a Cash Business."

The proceedings of the convention were not concluded as we go to press.

Indiana Retail Hardware Association.

The third semi-annual meeting of the Southern Indiana Retail Hardware Association was held at Evansville, February 7th and 8th, and a very large and gratifying number of the members were present, and every indication was given of the interest taken by the members in one of the most interesting programmes ever prepared for their consideration.

On account of the morning of Wednesday being devoted to the preparation of a line of work which was intended should be followed during the session, the meeting proper was not called to order until two o'clock in the afternoon. After roll-call and reading of the minutes of the last meeting, W. H. Weed, of Vincennes, president of the Association, delivered his annual address, from which we make the following extracts:

One year ago we organized this Association in the beautiful and progressive city of Princeton, and I feel that we all have much cause for congratulation, for we have caused a kindly feeling to grow between competitors and have come to look on them as friends instead of enemies, all working for one common cause—namely, the upbuilding of the Hardware business and making an honorable living.

This is our aim, and aside from correcting the evils that are creeping into the business we are brought together in a social way which should well repay us for our trouble in the building up of this Association. * * *

We have had a healthy growth and have a number of new members from the Northern part of the State whom

we want to co-operate with, for it takes the same curative dose for one that it does for all. The striking out of the word "Southern" and having the name of the Indiana Retail Hardware Dealers' Association henceforth would, in my opinion, be only justice to the dealers throughout the State, of whom we are expecting much in the future, and a resolution to this effect will no doubt be introduced at this meeting. * * *

The active interest that is being shown throughout the country goes to convince us there is a growing need for this Association, and should encourage all to strive the harder for increasing its membership until we have enrolled the name of every dealer throughout the State. * * *

A motion was made to suspend the rules in order to change the name of the Association to that of the Indiana Retail Hardware Association. The motion was adopted. The merchants present at the convention who were not members of the Association, and who were desirous of adding their names, availed themselves of this opportunity to join at this early stage of the proceedings. The convention was then addressed by Irving A. Sibley, of South Bend.

W. W. Robb, New Harmony, secretary-treasurer, presented his report, which was extremely full and complete, giving a thorough idea of what had been done during the previous year. We make the following extracts from the same:

At the first meeting your special Committee on Resolution and By-Laws drafted a copy of such resolution as they deemed appropriate, and we had 1500 copies each of these and application blanks printed and mailed to dealers throughout the State.

They also recommended that the constitution of the Northern Indiana Retail Hardware Association be adopted as the constitution and by-laws of this association, but upon a careful reading of the same we pronounced it very incomplete and took the liberty of revising the same, a copy of which met the approval of your president, was made a part of the record and adopted at the meeting on August 2, 1899. We have had printed 250 copies and mailed one to each of the members. * * *

To this meeting we have extended invitations to the officers (and such members as we could secure the address of) of the Chicago Retail Hardware Dealers' Association, Illinois Retail Hardware Dealers' Association, Louisville Retail Hardware and Stove Dealers' Association, Ohio Retail Hardware Association and Iowa Retail Hardware Association, all of which have acknowledged the receipt of same and extended greetings and compliments of the season.

During the month of November we had printed 2000 copies of the circular letter as prepared by your committee on same and 1000 copies of the resolution, which we mailed to dealers throughout the State and close towns in the bordering States.

Following these during the month of January we had printed and mailed 2000 copies of a third circular calling the attention of the recipients of the same to condition of our business, the objects and needs of this association, the date of this meeting, and making an appeal for a united effort to bring about a better condition of affairs, which seems to have met the approval and warm reception of a large majority of those receiving it. * * *

Believing that the time has arrived when steps should be taken to organize a national retail Hardware association, and that we can do much to promote its progress during this meeting, we offer the following resolutions and recommend their adoption for immediate action:

Resolved, That the president is hereby instructed to appoint a special committee of three, whose duty it shall be to formulate and introduce a mode of procedure by which we can effect the organization of a national retail Hardware association and report to this assembly.

Resolved, That if there be visitors (from other retail Hardware associations or retail dealers from other States) in attendance at this meeting, that one from each Association or State be selected to accept appointments on this committee and assist in the work thereof.

Resolved, That a copy of the report of committee be forwarded to the secretaries of the Illinois, Ohio, Louisville, Iowa and Chicago retail Hardware associations, all of

which hold their annual meetings at their respective places during the present month.

Believing as we do that the matter of organizing a national association should be acted upon immediately, and that a full and complete plan can be gotten before the several conventions mentioned, we ask that you give this special attention.

And in conclusion let me say that I esteem it a great pleasure to come in contact with and a great honor to occupy the office of secretary in this body of intelligent men. The histories of these associations are that they are upbuilding institutions, that they tend to bring men closer together that they may know the experience and have a higher appreciation of each other. Then let us not falter and fall by the wayside, but push forward to success.

Several special committees were appointed, which was followed by a discussion of the subject: "What have you done for the good of the association; what can you do in the coming year; what shall we plan to accomplish?" The discussion was then opened by Mr. Boonshot, of Shawhan, Boonshot & Co., Petersburg. The evening of the day was devoted to a smoker and entertainment tendered to the delegates. The Mayor of the city was expected to make an address on that occasion, Thursday's session was devoted to the reading of a number of papers on various subjects and discussion of such topics as was outlined in the original programme.

The convention continues in session as we go to press.

Farewell Dinner to Thomas Laing.

A complimentary dinner was extended to Thomas Laing, so long associated with the New York office of Miller, Sloss & Scott, San Francisco, on Wednesday evening, January 31st. It was given by a number of his friends previous to his departure for England, at "Rector's," on Broadway. The following gentlemen participated in the festivities: Thomas Laing, George A. Rogers, George P. Gillon, F. T. Tapley, V. C. Brown, J. N. Limeburner, George W. Adams, John Ellice, E. H. Coffin, Randolph Brandt and N. D. Williamson.

The whole affair was of a fraternally interesting character, and solid enjoyment reigned supreme, everything passing off with all the eclat imaginable, and proved a great source of hilarity to every one that was engaged in it. They participated in a discussion of an elegant menu served up in Rector's characteristic style, and as no affair of this kind would be considered perfect without the "presentation of a cup," one was presented to the departing gentleman that was not on this occasion especially a "loving cup," but a "parting cup." It was manufactured in the highest style of art from wrought copper, tin-lined, and the inscription on it would afford considerable amusement to the observer, if only from the style of the engraving which ornamented it, as every variety of that description of art was used on its surface. Notwithstanding the joviality that usually accompanies an affair of this kind, there was still a tinge of sadness arising from the fact that an old associate was about to leave for parts abroad, and it might be a long time before they would see him again. Mr. Laing after having passed so many years among us, will, have his future address in London, he having accepted a position with Fairbanks & Co., whose location in that well-known city is at No. 16, Great Eastern Street.

The cup was inscribed: "Presented to Thomas 'Forty-three' Laing by ten citizens of New York, at a dinner, assembled to bid him a fond farewell on his departure for England. In honor of the days of auld Laing syne. Not made in Germany." The names of the donors were inscribed on the cup in the very original manner referred to, the nicknames being used by which they were known among themselves, followed by the "trade-mark" with which most of them were associated, which no doubt will bring a smile to the countenance of Mr. Laing when he takes, as he undoubtedly will, a good long drink from its contents in the future.

A Handsome Souvenir.

The Wilcox Mfg. Co., Aurora, Ill., have exceeded all previous efforts in the way of souvenirs by issuing to their friends and customers a unique pictorial album, entitled "Familiar Faces in the Hardware Trade." Embodied in its contents are the portraits of the most prominent wholesale Hardware merchants throughout the United States, and, in addition thereto, quite a number of manufacturers also adorn the several pages. These are reproduced in well printed half-tone illustrations, all of them taken from photographs, and which, it is understood, have been in the course of collection for a number of years. In a corner of the title page a quotation is given as follows:

"To one who cons at evening o'er an album all alone,
And muses of the faces of the friends that he has known,
So I turn the leaves of fancy, till in shadowy design
I find the smiling features of these customers of mine."

The title page is followed by an index of the portraits included in the book, consisting of two pages; then follow the portraits, which are printed on excellent paper and shown in groups of two or three, on one side of each page. The names of the parties represented are given underneath each picture; also the house with which they are identified. There are nearly a hundred of these pages in all, 8 x 11 inches in size, and the volume is bound in good style and color. This is a very enjoyable collection for anyone connected with the Hardware business, in good shape for reference, and will be thought highly of by everyone fortunate enough to receive a copy. It is the first instance within our recollection of a volume of this character having been prepared with so much care and distributed as a souvenir with a certainty of instant appreciation.

The American Axe & Tool Co.

At the annual meeting of the stockholders of the American Axe & Tool Co., held in Pittsburgh on February 7th, the following directors and officers were re-elected: Directors—C. W. Hubbard, Sr., Geo. T. Lane, Ethan Rogers, F. T. Powell, J. H. Mann, Frank E. Mann, A. C. Mann, Robert Mann, Robert Gibson, C. H. Wier, C. W. Mackey, H. M. Knickerbocker, S. A. Rankin, J. H. Lockhart, C. W. Hubbard, Jr. Officers: C. W. Hubbard, Jr., president and treasurer; F. T. Powell, first vice-president; C. H. Wier, second vice-president; S. Winsor Baker, secretary; T. E. Moritz, assistant secretary.

Milk-Can Handle Litigation.

Considerable litigation is said to have existed between the Buhl Stamping Co., Detroit, and Frank Sturges, Chicago, the basis of which was the use of the cheese factory milk-can handle known as the "Heisey" handle. Our attention has been called to a decision rendered Jan. 24, 1900, by Judge Kohlsaat in the U. S. Circuit Court, Northern District of Illinois, the first and last paragraphs of which dismissed the bill in the following words: "I am unable to see that there is invention in the device covered by complainant's patent," and "The bill is dismissed for want of equity, upon the ground that the patent does not disclose invention."

He was struggling with an underdone steak when she said: "I gave a tramp a good dinner to-day."

"Why didn't you save it for me," he asked.—*Chicago Post.*

"Papa, can't I go down to the natatorium and learn to swim?"

"No, daughter. If you are really bent on acquiring an accomplishment by which you might sometime save my life, you can stay at home and learn to cook."—*Chicago Record.*

NEW GOODS AND SPECIALTIES.

The Norton Door Check and Spring.

Henry Pearl & Sons, No. 74 Murray Street, New York, have been made sole agents for the sale of the Norton Door Check and Spring. This is a valuable addition to

their important line of door checks and springs with which this house has been identified for so long a time. They make it a point to carry a large stock of the different kinds of door springs contained in the market, and are also sole agents for all the latest makes of door stops. Two of the most noted that they have been handling are the Corbin and Blount door springs. Their facilities are of that character that they can make a speciality of repairing the various door springs. They have a large stock of the numerous parts of door springs constantly within reach on their premises, so that repairs can be made with great dispatch. They number among their patrons the largest hotels and office buildings in New York, and wherever they have introduced their lines they have given satisfaction. They have recently enlarged their facilities to accommodate their steadily increasing trade, making their establishment the largest concern of the kind in the State, and, in fact, they claim to be the only one in the United States that handles door checks and springs exclusively.

Electric Drop Steel Fence Ratchet.

The Electric Oil Stove Co., Jackson, Mich., are this season placing before the Hardware trade the Electric Drop Steel Fence Ratchet, an illustration of which we give herewith. It is constructed in a thoroughly serviceable manner, which makes it present not only its lightest and strongest features, but is decidedly simple in its working qualities. There are no loose parts to cause annoyance, and it is made in a compact and rigid manner. It will tighten any length of wire desired; is adjustable in such a manner as to contract and expand when necessary; so constructed that it can be attached at any point on the wire without difficulty, and drawing equally from each way,

uniformly tightens the wire in a satisfactory manner. By attaching a wire loop in the end in order to encircle the post it can also be used as a post ratchet, which increases its utility to a great extent. Independent of this, it can be used on any kind of a post whether constructed of wood or of iron. Where post ratchets are used, it renders

unnecessary the expense of preparing suitable posts for the purpose. No special tools in the shape of a wrench are required, as any ordinary wrench used on the farm will operate it in a satisfactory manner. As it is placed on the market at a moderate price there is every reason to believe it will meet with an extended sale. Further information will be given by the manufacturers if required.

Novelty Blue Flame Oil Cooking Stove.

The Novelty Mfg. Co., Jackson, Mich., whose advertisement appears on page 8, are placing before the Hardware trade the Cabinet Blue Flame Cook Stove, which we illustrate herewith. These are made in several varieties, including Two and Three Burner Juniors and Two and Three Burner High, the latter being made with and without step. The illustration we give shows the two-burner Junior, which is one of the most popular of their products. The burners incorporated in the construction of these stoves, although greatly improved, are similar to those that have been used with such great success in their Wick

Blue Flame Stoves for a number of years. These stoves are intended to be used with wick, and the manufacturers state that after having experimented for years with every known substitute for the purpose of supplying oil to the burner, it has been demonstrated to their satisfaction there is no agent equal to that of a pure cotton wick. The Blue Flame burner is one of the important features of the stove, and is made of first quality open-hearth steel, the several parts being either double-seamed together, or fastened with bolts, making a compact, solid and durable burner without separate parts to lose or misplace. Its method of construction is such that as it becomes heated, the oil is converted into gas, burning with a clear blue flame, which gives intense heat and perfect combustion without smoke or odor. One feature in regard to the matter, attention is called to by the manufacturers; that the lower or small end of the burner fits easily into the open center below, and cannot be put in in any way but the right way, showing its extreme simplicity. The stoves leave the factory properly adjusted in every respect, so that the proper amount of air is supplied the burner to enable it to work in the most satisfactory manner. The manufacturers claim that in the construction of their burner it possesses a number of original features, so that interference with the supply of air is an impossibility. The number of salable specialties made by this company are well worth the attention of dealers

desiring to handle a perfectly safe cook stove of this style of construction.

Ives Window Stop Adjuster.

Hobart B. Ives & Co., New Haven, Conn., are manufacturing the latest improved Window Stop Adjuster or Bead

FIG. 1.

FIG. 2.

Fastener, which is furnished in steel, bronze and brass metal. We illustrate herewith its important features. This Adjuster is practically a flush washer, and made from one solid piece of metal with a thick bed that will not bend when tightening a screw, and a thin flange that admits of a close adjustment of screens and also prevents the screw from drawing it into the wood. We give in Fig. 1 a front view of this specialty, and in Fig. 2 a back view. The solid ribs shown in Fig. 2 will drive into the hardest bead or stop, and prevent the Adjuster turning in either direction. Its appearance on the window-frame is shown in Fig. 3, where it is illustrated, gives an appearance of how exceedingly neat and ornamental it looks when in position, affording a quick and simple adjustment of any shrinkage or expansion of windows, and doing away

entirely with unsightly weather strips and anti-rattler devices. It is claimed to be a perfect protection, consequently, against cold draughts, dust, etc., and is held in high appreciation by all who have used it.

Torrent Purifying Pump.

The Torrent Pump Co., Miles Avenue Station, Cleveland, Ohio, are placing before the Hardware and implement trade, the Torrent Purifying Pump for domestic use. The principles upon which this pump is based are of a scientific character, and in its operation will thoroughly infuse air into every part of the water of a well or cistern, and free

it of all impurities except mineral solutions, which are the cause of the hard water frequently found under such circumstances; and even that water has been greatly improved by the use of this pump. The cups are only two inches apart, thus throwing a third more water with the

same number of turns that is usual with the old style of long-link pumps. It is easy to set up and adjust, and requires but little skill to take out, as there are no attachments below the platform. The operation of the pump is said to be very simple, the buckets going into the water in an inverted position full of air, which is finally discharged when they right themselves at the bottom. They are then filled with water from the bottom of the well, and delivered at the spout, it is claimed, as pure as a mountain stream. The castings are made heavy, and are of sufficient strength for any depth, but at the same time are easy running. The spout is in one piece, and gives a natural flow to the water. The chain and buckets are galvanized, the weight wheel is made of stoneware which will not corrode, and the flanges are of sufficient width so that it will not leave the chain when turning rapidly.

Self-Feeding Match Box

The Cline Mfg. Co., No. 67 West Washington Street, Chicago, Ill., among the large line of Hardware novelties which have proved ready sellers among the Hardware dealers of the West, have found the simplest and possibly the most adaptable contrivance in the self-feeding match box introduced by them this season and illustrated here-

with. When one wants a light, no matter whether it is for the fire in the kitchen stove or for an after dinner smoke, matches want to come on call, and that's about the way they do when served from the Cline match box. Tear off the end of the match box and place torn end downward in the Cline holder and the matches do the rest.

“How are you getting on with your automobile?”

“I can start it all right, but I can't stop unless I run into something.—*Chicago Record*.”

RECENT TRADE PUBLICATIONS.

THE ANDREWS WIRE & IRON WORKS, Rockford, Ill. Pamphlet catalogue, No. 21, of 52 pages, oblong size, covering a large line of wire goods and Hardware specialties that have been made by this concern for a number of years, including all the various kinds and styles necessary under such heads as display goods, stationery and household goods, florists' goods, tables and stands, guards and railings, stable fixtures, foundry and coal-yard appliances. These goods are all admirably illustrated by halftone and other styles of cuts and full description where necessary, so that it is a desirable catalogue to consult, list prices being given in every instance and a discount sheet accompanying the entire catalogue.

ARCADE FILE WORKS, No. 97 Chambers Street, New York, N. Y. Advance catalogue of their line of Elk and Dixie bicycles for 1900. They refer with pride to the superior quality of their 1899 line. For 1900 they offer the Elk at \$40 list in either men's or women's models. These wheels have been improved over last season's in many ways. Particular attention is called to the tool steel cones, ground and tempered, and turned from the solid bar, making the easiest running wheel possible, and to their special hand-polished enamel and nickel on duplex copper, which makes the Elk a wheel of superior finish. The Morrow coaster-brake will be furnished, if desired, on these models, at \$5 extra. The Dixie line will consist of men's and women's models, listing at \$25. This grade of wheel is built of Shelby cold drawn seamless tubing, has flush joints throughout, expander at head, and is equipped with guaranteed tires and furnished with a first-class equipment. Every wheel they manufacture bears their name and is guaranteed.

BROWN & WALES, Nos. 69-83 Purchase Street, Boston, Mass. Ninety-six page pamphlet catalogue of steamfitters, gasfitters' and plumbers' supplies. Finely illustrated and printed on excellent paper, using reduced-size illustrations throughout and enabling them to condense much information on a page regarding the lines of goods handled by them and shown in this desirable catalogue.

P. & F. CORBIN, New Britain, Conn. Catalogue of New Departure coaster hub and brake, including swinging pedals, bicycle and Automobile parts. This pamphlet catalogue of 24 pages is placed before the trade in the admirable style for which this house is noted, using the finest coated paper and excellent cuts with full descriptions, so that every page is not only of an interesting character, but easily understood. Accompanying this catalogue is a similar one in which the Ramsey swinging pedals are exploited as well. The catalogue is similar to the other artistically and in every other respect and reflects great credit upon the catalogue department, which has been a notable one since its assumption by "The Man in the Corner," J. B. Comstock. Anything emanating from his "corner" is invariably artistic in conception and claims attention from its intrinsic worth.

THE ERICSSON TELEPHONE CO., No. 296 Broadway, New York. Eight-page booklet having reference to the Ericsson system of Swedish telephones handled by them in this country. This is part II. of the series of similar booklets giving complete information regarding the goods and full particulars that will be of interest to those handling goods of this character.

NEW PROCESS TWIST DRILL CO., Taunton, Mass. Pamphlet catalogue of 24 pages, finely illustrated and printed on excellent paper, and including their entire product of hot forged twist drills. The contents include mounted sets of twist drills, wire gauge and jobbers' drills and a full line of taper and straight shank drills and steel sockets for taper shank drills in all the usual varieties. They present something new in forged tools, in the shape of four-groove chucking reamers, with Morse taper or straight shanks. The catalogue includes a full line of regular drills with Morse taper or straight shanks; straightway drills and straight lip increase twist drills; straight shank machine bits for wood. Included in the contents are drills fitting blacksmiths' drill presses and bit-stock drills for metal and wood, as well as bit-stock drills in sets and taper square shank drills. The line is a large and extensive one and is calculated to include everything desired under this head. On some of the pages are given tables showing the speed of drills and similar information. They also manufacture black walnut cases for drills, so that the Hardware dealer can carry a stock in a small compass and be able to reach any size in a moment.

THE SCHNEIDER & TRENKAMP CO., Cleveland and Chicago. 1900 catalogue of "Reliable" gas stoves and ranges, the catalogue consisting of a 100-page pamphlet filled with superior illustrations printed on excellent coated paper, which show the goods off to admirable advantage, and they constitute a fine display of desirable goods now being rapidly taken up by the Hardware trade of the country. Among the various kinds of gas stoves and ranges shown are gas heating stoves, combination coal and gas ranges, gas radiators, parlor grates, hot plates and laundry stoves, and included in the assortment will be found paint burners, kitchen boiler heaters and instantaneous water heaters. This gives an idea how large a line is covered by the products of this well known house. They also include tinnerns' and plumbers' furnaces, together with "Reliable" gas-stove ovens and burners of every description. This is their eleventh annual catalogue, and they are pleased to say it represents the largest as well as the best line of gas-cooking appliances they have ever shown.

THE PHILADELPHIA COMMERCIAL MUSEUM, Philadelphia, Pa. An extensive pamphlet covering the comparative statistical tables and charts of the commerce of the world, compiled by William Harper, Chief of the Bureau of Information of the Philadelphia Commercial Museum. These statistics are given in such shape as to make them understandable at a glance, the comparisons made between the countries being shown in proportions compassed within a circle radiating from the centre, in which the commerce of the world is shown by the greater or lesser proportion it occupies within the circle. As this is given in a variety of colors, it makes it extremely interesting as well as instructive to make the comparison. These numerous pages of statistical information cover almost every possible requirement, starting from the commerce of the world and taking in even statistics such as the world's steam power since 1840; production of coffee since 1832; the railways of the world and the capital employed in the same; the shipping of the world since 1800, etc., etc. It is a very interesting and important publication.

THE PIQUA HANDLE & MFG. CO., Piqua, Ohio. Catalogue for 1900 of their production of farmers' tool handles,

garden rakes, natural wood lock furniture, base knobs, electric push buttons and kindred goods. This company are among the largest manufacturers of this line of goods, and present a very desirable catalogue to the trade covering lines that are usually distributed through the Hardware trade. It includes a full line of farming tool handles, from hayfork to shovel; wood door knobs in great variety, all the different styles and finishes, from wood roses to bronze metal; also half-closet knobs, shutter and sash knobs, plate escutcheons, fancy base knobs, floor stops and door stops in all the cheaper or higher grades. Included in the assortment is a line of chisel handles in all descriptions of wood, carving tool and file handles; awl, screwdriver and auger handles; hickory mallets, bungstarters, etc. They make a large line of special goods as well, having improved machinery for producing all special articles.

GREENE, TWEED & CO., No. 17 Murray Street, New York. Illustrated catalogue of specialties. Full size catalogue, pages 8x11, made up from their large catalogue and intended to cover a line of specialties that are suitable for one branch of their trade. The contents cover manufacturers' supplies in large variety and include the various lines of goods of which they are manufacturers or control the entire production of, with the exception of special brass goods, the catalogue of which we noticed a short time ago. Among its contents will be found lace leather in all the varieties, Blake's belt studs, copper rivets and burrs, rivet sets, belt couplings, belt awls and punches, including socket punches, spring punches and combination belt punches; washer cutters, belt clamps, plumbago packing and a number of other styles of packing of which they are the sole manufacturers, including the Champion, Trumpet, Palmetto, Royal and Crescent. The "Greentweed" lubricators are largely illustrated, likewise piston packing and rubber gaskets. An assortment of oilers of every description for factory purposes and otherwise are largely illustrated; likewise hose couplings and hose appliances and connections; hose pipes, spanners and washers. Included in its contents are lawn sprinklers, wood and iron hose reels, hose carts, interchangeable hammers, Baxter wrenches, etc. This is an extremely desirable catalogue to be in possession of large concerns needing these supplies almost daily, and the contents show great care in compiling the same. The catalogue is accompanied by a revised discount sheet and catalogue for the jobbing trade.

THE HARDWARE SUPPLY CO., Grand Rapids, Mich. Catalogue of Triumph workbenches and attachments, which includes those fitted up with the latest improvements and suitable for cabinetmakers, carpenters and carvers. They also make a line of amateur benches for youths, either single or double, and included in the assortment is an adjustable steel screw clamp-head. The tops of their benches are made of the best selected hard maple, three inches thick. The legs are made from three-quarter inch gas pipe thoroughly braced and are perfectly rigid. Beneath the vise attached to the front legs is an adjustable support for long or heavy work. This support can be quickly raised or lowered by turning the thumb-screw which secures it in position. This slight description will give an idea of the character of these new and desirable goods, the catalogue of which should be in the hands of every Hardwareman, many of whom would be in doubt where to obtain goods of this character.

THE HOLLANDS MFG. CO., Erie, Pa. Catalogue for 1900 of machinists' and plumbers' tools, natural gas burners, etc. This company are large manufacturers of such appliances as the Hollands improved planer chucks and an important line of vises suitable for machinists, sawfilers and pattern and toolmakers, etc., some of which are illustrated, with offset jaws and detachable V-jaws and self-adjusting taper

jaws. They also make the Star bicycle vise that is extensively used, and a full line of combination pipe vises, including one style made with side issue. Included in the assortment shown in this catalogue are such appliances as Acme pipe tongs, "Trimo" and Stillson pipe wrenches, Hollands roller and three-wheel pipe cutters, etc., etc.

F. E. MYERS & BRO., Ashland, Ohio. A very complete hanging calendar and catalogue, which has a calendar in the center and surrounding it and filling the entire poster, which is four feet long, on which the manufacturers have placed every illustration of their goods found in their regular catalogue. If this hanger is placed in a conspicuous position in any Hardware store it cannot help but suggest a possible want.

Advertisers' Corner.

It is more important to put good advertising matter in your ads. than it is to make them big and boisterous.—*Press and Printer.*

People are not going to make a special effort to read your advertisement. Make it so inviting and plain that they cannot escape it.—*Rhode Island Advertiser.*

The paper can only sell you so much white space, as a real estate man would sell or lease you so much vacant property; it remains for you to improve it and make it pay.—*Chicago Grocer.*

"My barber is a great talker—but he illustrates his stories."

"How does he illustrate them?"

"With cuts."—*Pittsburgh Dispatch.*

Old established houses, who for years have scoffed at advertising, are now coming out with up-to-date announcements, striving in every honorable way to retain their old-time prestige and gain as much new preference as possible.—*Advertising Success.*

The acceptance, by a publisher, of a rate materially below the published card, should at once suggest to the advertiser the existence of a grave weakness in the claims made for excellence in, and circulation of, the periodical, the use of which may be under contemplation.—*Machinery Advertising.*

It is well to give as graphic a description of the goods as may be done in black and white. The nearer a possible customer can come to seeing the goods in the newspaper columns, the surer he or she is to be a purchaser. When these descriptions are given do not use trade terms. Avoid technicalities as you would a pestilence.—*N. E. Grocer.*

The advertiser is after legitimate profit first, last and always. He is willing to throw the artistic to the winds any day, if the inartistic serves his purpose best. But the advertiser must not tie to the idea that the inartistic is the prevailing fad, or the winning card. He must not ignore the fact that the artistic is here to stay.—*Advertising World.*

A booklet enables a man to tell a longer story than he can tell in an advertisement, unless he has a great deal of money and a great deal of nerve. Sometimes I am inclined to think that an advertisement covering the entire ground might be published in the right sort of papers and get a great deal wider circulation for the same amount of money than can be obtained by the publication of a booklet. The booklet is a sort of stock advertisement, however, and may be used effectively in the regular daily correspondence, or in the daily outgo of packages and boxes.—*Stoves and Hardware Reporter.*

REVIEW OF THE MARKETS.

Hardware: February opens up in good shape, with a continuance of favorable business, with occasionally some anxiety expressed regarding the future, fears being entertained of a possible range of lower prices. Indications point to the fact that comparisons of this kind, when made, take the past and present price of wire nails as a basis, the advance in that article having been about 100 per cent., but on a great many other goods that enter largely into a Hardware stock, the advance has been of a less important character, ranging from 10 to 25 per cent. And as these advances were made upon prices that were considered at the time the lowest the Hardware trade has ever seen, it would seem as though most of these fears have very little to justify them. The principal reason, however, in our estimation why so much conservatism is shown this season as compared with last is the fact that the temptation last year was to speculate in the stocks of goods that were ordered. No such temptation is apparent this year, as further advances of material importance are not anticipated, dealers being satisfied to pursue the even tenor of their way under existing circumstances.

Wire Nails: There have been no changes since our last issue in the prices on this staple line. Orders are coming in of more importance than those noted for January, but the extremely large specifications that have been customary this time of the year are still lacking, as the price of wire nails is regarded as being higher in proportion than anything else in the market of such wide-reaching influence. The market is firm at previous quotations, which remain as follows: f.o.b. Pittsburgh; terms, 30 days, 1 per cent. off in ten days:

To jobbers in carload lots.....	\$3.20
To " " in less than carload lots.....	3.22½
To retailers in carload lots.....	3.35
To " " in less than carload lots.....	3.45

In New York City the demand is fairly good, and manufacturers' prices remain without change. Quotations are as follows:

To retailers, carload lots on dock.....	\$3.53
" " less than carloads on dock.....	3.66
Small lots from store.....	\$3.60 to 3.75

Cut Nails.—The manufacturers of cut nails advanced prices 5 cents per keg on January 31st, and established a schedule of prices which make the following quotations the market price to-day, f. o. b. Pittsburgh; terms, 30 days, 1 per cent. off in ten days:

1000 kegs and over.....	\$2.50
In carload lots.....	2.55
To jobbers in less than carload lots.....	2.60
To retailers.....	2.70

New York prices may be quoted as follows, with business fair:

To jobbers in carloads on dock.....	\$2.73
" " in less than carloads on dock.....	2.78
To retailers.....	2.90
Small lots from store.....	\$2.90 to 2.95

Barb Wire: The market on barb wire is without change, the prices remaining as previously reported. Anticipating smaller demands from the agricultural buyers, the large stocks that were the feature of a year ago are not in evidence. Jobbers who have always carried this line in full supply are very chary about stocking up at present quotations. The orders already in hand are made to keep an average supply, but without the usual warehouse stock. Prices remain as previously quoted, f. o. b. Pittsburgh; terms, 30 days, or 1 per cent. off in ten days:

To jobbers in carload lots, Painted.....	\$3.65
" " Galvanized.....	3.80
" " in less than carload lots, Painted.....	3.67½
" " Galvanized.....	3.82½
To retailers in carload lots, Painted.....	3.80
" " Galvanized.....	3.95
" " in less than carload lots, Painted.....	3.90
" " Galvanized.....	4.05

Smooth Wire: Smooth wire continues as usual in good demand by comparison with other wire products, entering largely as it does into the wants of the manufacturers, but the orders for future requirements are kept down to correspond to the order books in regard to quantity, the

prevalent idea being that in the absence of the usual large orders, some slight concession may be made in the immediate future. Prices remain as previously quoted f. o. b. Pittsburgh, terms thirty days, or 1 per cent. off in ten days:

To jobbers in carload lots.....	\$3.05
To " " in less than carload lots.....	3.07½
To retailers in carload lots.....	3.20
To " " in less than carload lots.....	3.30

The charge for galvanizing is 50 cents on sizes from 6 to 14 inclusive; on Nos. 15 and 16, 85 cents, and on Nos. 17 and 18, \$1.10.

Shot: The recent decline in price of shot was of short duration. On February 5th manufacturers advanced the quotations 5 cents per 25-pound bag, so that present prices are as follows, terms net cash, 30 days, or 2 per cent. discount for cash in ten days, with the usual abatement in lots of one ton or over of 40 cents per 100 bags.

Drop shot, sizes smaller than B, per 25-lb. bag.....	\$1.52
" " B and larger sizes.....	1.77
Buck shot, per 25-pound bag.....	1.77
Chilled shot, " " ".....	1.77
Dust shot, " " ".....	3.10

Wrenches: Peck, Stow & Wilcox Co., No. 27 Murray Street, New York, announce the following advances in the prices of their Solid Handle and Robinson Wrenches, to take effect February 1st: Solid Handle Wrench, 40&10 per cent.; Robinson Wrench, 50&5.

Wire Rope: Through the action of the Associated Manufacturers galvanized wire rope is now held at a discount of 20 per cent., instead of the discount previously prevailing of 30 per cent. This applies to galvanized wire rope only, the price of the plain remaining as before, 30 per cent. discount. On either quality 2½ per cent. additional discount is made to dealers.

Cordage: No change is noted in the current quotations on cordage, and our previous quotations are consequently sustained. For carload lots they are as follows with an advance of a quarter of a cent for less quantities, f.o.b. New York, Boston or Philadelphia:

Manila, 7-16 inch and larger.....	per pound, 15½ cents.
" " ¾ inch.....	16 " "
" " ½ and 5-16 inch.....	16½ " "
Sisal, 7-16 inch and larger.....	10½ " "
" " ¾ inch.....	11 " "
" " ½ and 5-16 inch.....	11½ " "
" " Lath Yarn.....	10 " "

Manila Tarred Rope, 15-thread, 15½ cents. Manila Hay Rope, medium, 15½ cents. "A" grade of Jute Rope 7½; "C" grade 7 cents. Jute Wool Twine, 4 ply only, per pound, 7 cents; all other sizes, 7½ cents.

Linseed Oil: Dean Linseed Oil Co., under date of January 29th, quote as follows:

In lots of less than 5 barrels.....	57 cents per gallon.
In lots of 5 barrels or more.....	56 cents per gallon.
The five-barrel price only applies to deliveries of that quantity at one time.	
Boiled linseed Oil, 2 cents per gallon higher than Raw.	
Calcutta Oil, 68 cents per gallon.	

THE PHILADELPHIA TRADE.

January is now past, and shows a very satisfactory opening for the new year. The assortments ordered have been such as to show that stocks throughout the country are badly broken and practically low on many lines of staple goods, and indications point to a good demand, while the large amount of money now being paid out in wages cannot fail to have a beneficial effect in enabling consumers to buy freely.

Contrary to general expectations, prices of to-day do not seem to check consumption, except, possibly, on one or two lines, and the great quantity of tools now being sold is a clear evidence that mechanics are now actively employed at good wages, and this is always a most healthful sign.

There is an impression in some quarters that the advance of the average Hardware stock during the past year has been exceedingly heavy. Various estimates are made of this advance, running all the way up to 100 per cent., some claiming that the value of the stock on hand has doubled since last year.

We have it. Do you need it?

JAP-A-LAC
New Wood Finish

Write for our prices and dealers' discount.

The Glidden Varnish Co., Cleveland, Ohio, U. S. A.

It may be of interest to state that very careful calculations to give the gross advance in the value of a Hardware stock (taking the prices of to-day as compared with the lowest prices of a year ago) show an advance of only 33½ per cent.; in other words, if a man should buy a stock of goods to-day at present prices, a discount of 25 per cent. would bring that stock down to the lowest prices of a year ago—and the prices of a year ago were the lowest ever reached in the history of the trade.

This seems to show that an advance in price has not been as unreasonable as might be supposed at first thought. It is true that some few lines of goods have advanced very heavily, but taking the whole line as carried by the average Hardware dealer, we know we are safe in saying the advance in price will not exceed 33½ per cent.

It, therefore, seems clear it is not reasonable to stop business on account of prevailing prices, and the merchant who withdraws from business and reports out of goods is much more apt to damage his trade than reap any benefit thereby.

Advances have by no means ceased. We are constantly hearing from manufacturers who now find themselves confronted with higher prices for material. Throughout last year they had contracts to a greater or less extent which supplied them with material at old prices. These contracts have now been exhausted, and, being obliged to buy at to-day's prices, they find themselves unable to manufacture goods at old quotations, and, therefore, state that higher prices are inevitable.

BIDDLE HARDWARE CO.

THE PITTSBURGH TRADE.

There is one factor in considering increased sales that may not be given enough attention; that is, the value of goods compared with one year ago. When your books show a 50 per cent. increase in sales for January, what proportion of that increase is accounted for in tonnage, and what in value?

When values were down at the bottom we all had to work our hardest handling goods, and when the month was out and books footed the amount was disappointing; the same work to-day will show a large increase in the footing.

There is good reason, however, to believe that this year will show an equal or increased tonnage over 1899, as the purchasing power of the country is much improved by reason of constant employment and higher wages.

The effort of the merchant should be to retain his usual percentage of profit on the increased value, and, if this is done, the result at the end of the year will be very satisfactory. Take an article which a year ago sold at \$2, on which you had 20 per cent. profit, making you 40 cents. To-day the same thing sells at \$3, and if you get your 20 per cent. profit on it, you have 60 cents.

This reminds us of a story of a Hardwareman in a far west city who started in flush times in the mining regions. He was not at all careful as to what his goods cost him, and upon a friend calling attention to this fact he replied: "Well, I always add 100 per cent. on cost anyway, so it don't matter." While we cannot advise imitating this man, either in buying or selling, we should be satisfied at the higher values now ruling, and "Make hay while the sun shines."

Of course, this idea of high values is subject to abuse, and we are quite ready to admit that a few items in Hardware have been forced too high by artificial means. This will, however, restrict sales on such goods, and build up competition to bring them down.

We had a visit from Hobart Weed, of Buffalo, the other day, which we enjoyed very much, and would be glad to see our competitors often when they are in our city. Mr. Weed says wire cloth is worth \$2 in that city and it ought to be here. All the straws point to a scarcity of this article this season. LOGAN-GREGG HARDWARE CO.

THE CLEVELAND TRADE.

The indications are that we are to have a cheap money market; those who expect a close one will be disappointed. In closing up the year's contracts surplus stocks are ordered by a large number of merchants and the banks are called upon to furnish money to meet payments for them.

Most of these loans will soon be paid, and the banks will be looking for new loans.

The increase in the value of stocks has been met by the profits of 1899, so that the banks will not be called upon to carry additional loans on that account.

A close money market in December and January can easily be accounted for, and it is sure to be relieved in February, so that securities paying a reasonable interest will be in demand. Combinations and consolidations will find it easier to get their schemes financed, and many of the waiting ones will be completed.

The foreign demand that has in the past fixed our home prices will be compelled to pay home prices for our surplus. What has been said of England will be true here: "Goods in warehouses may be seen marked for shipment to every country on the globe." A change in business so sudden revolutionizes things, and statesmanship of the highest order is needed to meet the new conditions.

Our means of export transportation need enlarging, our financial system improving, our civil and consular service put on a business basis and a strict accountability required of all corporation officials, imposed by severe penalties, if we are to accept the position proffered us to be the commercial nation of the world.

Opportunities impose obligations; the one neglected, the other is lost. Let the north and the south, the east and the west forget petty quarrels and unite in an effort to make this country, as Emerson called it, "The country."

Trade is quite as good as it could be anticipated. The uncertainty in regard to future prices causes hesitation, but there is an encouraging amount of well-assorted orders being received and orders for future shipment, which show evidence of confidence in a good demand from consumers. January closed with pleasing prospects.

There is some anxiety among jobbers, and a tendency to cut prices. Most of them have overstocks in some lines, and in the aggregate these overstocks cover a large percentage of goods. This causes confusion with traveling salesmen, as they are not willing to be undersold, but when Spring trade is fairly opened it will probably absorb these overstocks, and compel liberal purchases by jobbers at new prices. There is no reason to expect any radical decline.

The trade are buying quite liberally for immediate

wants, and also for future shipments. The next sixty days are sure to bring liberal orders for wire and nails as none have been sold for future shipment this season.

Heretofore jobbers have had from 100 to 200 cars sold for March and April shipment. The sale of wire will be less for farm use, but all that the mills can furnish before June will be in demand, and many retailers are likely to be troubled to get supplies.

The increase in goods made of wire has been large in recent years. The American Steel & Wire Co. have placed the Wall Street end of their plant in good condition. If they will do as well for the consumer of their goods the complaints against trusts will be less. Unless they do this they will promote competition that will look after that end, and perhaps effect the Wall Street end also.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE CHICAGO TRADE.

Since our previous communication, the closing up of our last year's business, together with the necessary preparations for the coming Spring trade, has kept us so busily employed that we have done little or no letter writing, excepting to the salesmen.

The recent advances by manufacturers in the price of shot, heating stoves, Coes Wrenches, screen doors, axes, cross-cut saws, as well as a number of lines of Hardware of lesser importance, have made it necessary to send a number of communications of late to our travelling salesmen in order to keep them posted up to date. The most important of these advances seems to have been made in the price of axes for next season's trade, and while in comparison with one year ago, the advance seems considerable, yet in comparison with the largely increased cost of steel, and grindstones for the grinding and polishing of the tools, and the increased cost of the boxes would seem to warrant the manufacturers in making the present prices,

which, after all, do not seem by comparison to be excessive. Be that as it may, our customers seem to taking it for granted that we are marketing our goods as cheaply as it is possible, for the reason that there does not seem to be a lessened demand in the trade; instead of that our business for the month of January shows an increase over January of one year ago to the extent of from 30 to 35 per cent., and if we can judge anything about the conditions governing trade for the next 90 days, from the "future" orders our salesmen have taken, all we can say is, the increased percentage over and above the volume of our last year's business is likely to continue right through the Spring trade.

The Door Spring.

Door springs of some sort have been in use for many years, says the *New York Sun*. Two of the simpler and cheaper kinds have long been familiar and are still extensively used. One of these is the steel rod held with one end in a fastening secured to the door jamb and the other end in a fastening secured to the door. The other is the long coiled wire spring, with its ends similarly secured. The modern door spring, including a check as well as a spring, first came into use about twenty-five years ago. The present widespread use of the check and spring dates back about fifteen years.

There are perhaps a dozen kinds of modern door springs. The object of all is, of course, to close the door with certainty, but at the same time gently. The checks most commonly used are air checks and liquid checks. The modern door spring saves time by making it unnecessary for people to pause to close the door, saves temper by doing the work of the careless who would not wait to close the door, and protects the nerves by closing the door easily and gently, without any slamming or banging. It is counted now as one of the essential modern conveniences. These checks and springs are made of iron, of bronzed metal, so called, and of solid bronze, and they are sold at various prices from \$2 up to \$15. Some for private houses cost as much as \$20 apiece. There are seasons in the door-spring trade; winter being the time when the greatest number are sold. There are sold in New York and its vicinity probably 40,000 of the modern checks and springs annually, at an average cost of perhaps \$5 each. Taking in the common kinds of door springs, still used for various purposes, it is likely that this neighborhood spends nowadays \$250,000 a year for door springs.

Marvels of Locomotives.

The story of the locomotive sounds simple in the recital. The wonder of the thing comes into view only when one reflects on the speed and nicety with which cumbrous parts are made to do their duty. The piston and connecting bar of a modern locomotive weigh some 600 pounds. When the speed is sixty miles an hour these parts travel back and forth five times a second.

Ten times a second, at the end of every stroke, the piston head is at rest. It must pass from this condition to a

velocity of 1800 feet per minute in one-twentieth of a second, says *Ainslee's Magazine*. The drive wheels measure more than a rod at every revolution, but when going sixty miles an hour they must turn more than three hundred times a minute.

Sixty miles an hour is the merest commonplace to the mind of the up-to-date railroad man, but it means other things besides those described that are wonderful to the outsider. It means a steam pressure blow of twenty tons on each piston head every tenth of a second. It means that up in the cab the fireman is throwing into the furnace two-thirds of a ton of coal every hour; one engine burns coal faster than ten men can mine it. It means two quarts of oil every hour to keep her journal boxes greased and everything running smoothly.

It means that the engine and its half-dozen cars and load of human freight is moving through space with twice the power of a shot from a hundred-ton gun. It means that the engineer has worked her up to the point where she can use every ounce of steam, that he is coaxing her as a jockey urges his mount in a fierce race, and yet it means that he is ready at a second's notice to move the reversing lever and apply the air brakes that will stop the mighty steam avalanche within the distance that it covers as it stands on the tracks.

Weights and Measures in Brazil.

The decimal and metric systems of weights and measures are in use all over Brazil, and are employed throughout the tariff. Weights are always calculated in kilos. Measures vary according to the article, some being in English yards, others in metres, and others in Portuguese varas (in use all over Brazil). When the English system is adopted in invoicing it is generally advantageous to give equivalents in the decimal system for Custom House work and other purposes.—*Exchange*.

Dorothy—"Mamma, if I should die, would I go to heaven?"

"Why, yes, darling, of course you would."

"And if you should die, would you go to heaven, too?"

"I hope so, dear."

"I hope so, too; because it would be very awkward for me to be known as the little girl whose mother is in hell."

AT THE TRAPS OR IN THE FIELD

Laflin & Rand Smokeless Powder will give a better pattern with the same velocity than any other powder made. Further than this you can always depend on its being just the same; hot or cold, wet or dry and in any climate. We guarantee this and invite tests. If you shoot a revolver or rifle you will be interested in our latest output, SPORTING RIFLE SMOKELESS. Write for information.

LAFLIN & RAND POWDER CO.,
NEW YORK.

OUR "TENTH ANNIVERSARY" NUMBER.

APRIL 10, 1900.

In accordance with our annual custom, we shall celebrate the
Tenth Anniversary of the founding of "HARDWARE"
by the publication of the handsomest and most
artistic specimen of a trade journal ever
published in the interest of the
Hardware industry.

THOSE of our readers who may remember the paragon of publications which was issued by us in 1898, followed by that masterpiece of printing on this date in 1899, can form an idea of what is meant when we say it is our intention to duplicate, and, if possible, surpass the high standard of newspaper excellence then and there achieved.

The two previous Anniversary Numbers have each been devoted to a special object—that of 1898 to the interests of the numerous **HARDWARE ASSOCIATIONS**, to the furthering of whose intelligent aims the greater part of our issue was given, while of our Anniversary Number of 1899 we made a **HARDWARE JOBBERS' NUMBER**, the issue of that date being largely given to the deserved exploitation of their methods of doing business and the ethics of the trade in this special line of work.

The contents this year will be more varied than in either of these previous issues, and will appeal to our readers and subscribers in a way that will insure a careful consideration being given to every page, whether of general reading or its many attractive advertisements.

To our advertisers we offer an opportunity, rarely met with outside the pages of these Anniversary Numbers of ours, to exploit their choicest lines of goods by the aid of the fine half-tone illustrations now so generally used in catalogue work and so useless for illustration purposes of a high order, except on the superior grade of coated paper used in these special numbers. We challenge comparison for perfect artistic expression, with the superb excellence shown in our treatment of these favors from our advertising patrons.

We have already in hand a number of pages ordered for this issue, and we would urge upon our advertising friends the necessity for an early order for space in this important number, as no advance upon our regular rates is contemplated.

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Denison, Ia.—The J. B. Romans Co. have filed articles of incorporation with the Secretary of State. The incorporators are J. B. Romans, J. N. Bradley and B. J. Stibbert, and the company will conduct an implement, Hardware, fuel and plumbing business. The capital is \$25,000.

Denver, Col.—Dawley Hardware & Furniture Co. has been incorporated with a Capital stock of \$10,000. H. A. Dawley, H. J. Sprinker, Mirtie B. Dawley; Rocky Ford.

Great Falls, Mont.—Articles of incorporation of the Western Hardware Co. have been filed for a term of twenty years from January 15, 1900. The capital stock is \$25,000. The directors for the first term are: W. F. Brown, J. A. Collins, Charles F. Wright, L. J. Cresswell and J. T. Lynes.

Lima, O.—W. E. Penny.

Meridian, Miss.—Meyer-Neville Hardware Co.

Seymour, Ind.—Kessler Hardware Co. has been incorporated. Capital, \$6000. Incorporators: J. Kessler, M. H. Kessler; both of Seymour.

Statesville, N. C.—A charter has been applied for for the Flanigan-Evans Hardware Co.

Waxahachie, Texas.—The Oldham Hardware Co. has been incorporated. Capital stock, \$12,000.

Wilkesburg, Pa.—Brown Hardware & Supply Co. has been incorporated. Capital, \$50,000. Incorporators: C. P. Brown, J. R. Cavanaugh, T. R. Gracie, J. A. Cavanaugh, all of Pittsburgh.

Wingate, Ind.—Krug & Craig.

Changes and Improvements.

Anniston, Ala.—O. M. Alexander has bought the entire business of the Swain Hardware Co.

Bellbrook, Ohio.—The Spring Valley Hardware Co. have sold out to J. L. Harper, who has taken possession.

Belle Center, Ohio.—I. W. Blair has bought the interest of his partner, L. T. Emery, in the Hardware store.

Calvert, Texas.—Cooper Allen, formerly connected with the firm of Gibson, Allen & Connaughton, has purchased the stock of Hardware from J. P. Fuller and will continue the business.

Center, Ind.—L. S. Lett has closed his Hardware store and moved to Hemlock, where he has purchased the Ingalls interest in the firm of Ingalls & Scott.

Center, Ind.—Duncan & Hatton have added a stock of Hardware and agricultural implements to their general store.

Cleburne, Texas.—G. B. Randle, formerly of Rockdale, has bought the Hardware and implement company of John L. Cleveland & Co.

Cumberland, Md.—Archie C. Willison, of the Cumberland Hardware Co., has bought

at private sale for his company the valuable stock of A. D. Ladew, who has retired from the Hardware business.

Decatur, Ind.—Ashbaucher & Bell, the Second Street Hardware and implement firm, have sold out their store to Albert and Floyd Britton.

Elk Point, S. D.—H. H. Rowe has sold his Hardware stock and building to George W. French. Mr. Rowe has been in the Hardware business in this city continuously since 1867, being the longest in business in South Dakota.

Fort Scott, Kan.—The L. Ault Co., No. 202 National Avenue, have purchased the stock of Hardware of L. Williams.

Heuvelton, N. Y.—The firm of Pierce & Millard, Hardware dealers, have dissolved and Mr. Millard will continue the business.

Holland, Mich.—The firm name of Kanter Brothers, Hardware dealers, has been changed to Kanters & Standart.

Lakeview, Ohio.—Marriott & Leatherman, Hardwaremen, have dissolved partnership, Mr. Leatherman retiring, while Mr. Marriott will conduct business at the old stand.

Marlin, Texas.—Rush Bros. & Gardner, Hardware and furniture merchants, at this place, have purchased the residence property of Mrs. Barnes, near the Court House Square, and will erect thereon a large two-story brick building, which they will occupy in their business.

Maysville, Ky.—John C. Adamson has withdrawn from the firm of the Frank Owens Hardware Co., having sold his stock to Harry B. Owens.

Mt. Sterling, Ky.—J. Ed Grubbs has purchased a one-half interest in the Hardware store of W. R. Oldham and taken possession.

Natchez, Miss.—The new warehouse for the Geisenberger & Baker Hardware Co. on North Commerce Street will be completed in a few days.

Newport, N. Y.—M. N. Pearce has sold his entire stock of Hardware to J. B. Lankton.

Northport, Wash.—James Pickerell & Co. have sold their Hardware business and stock to Broderius Brothers, of this place.

Richford, Vt.—H. C. Comings has disposed of his interest in the Hardware and furniture business of Powell & Comings to A. Leon Esty, for several years clerk for the firm.

Rogers, Ark.—The Rogers Hardware Co. expect to begin remodeling their store building at once. It is the one that has been occupied by W. L. Edwards. They will extend the building back to the alley and will also dig a basement for storage purposes underneath the first floor. An elevator will be put in the building and the upper floor will be fitted up for use.

Sault Ste. Marie, Mich.—The Chippewa Hardware Co., successors to the Ferguson Hardware Co., in the First National Bank block, have closed their doors to make an

inventory of their stock, preparatory to a change in management. Arrangements for the deal have been in progress for several weeks. The purchasers of the business are R. G. Ferguson and W. H. Miller, of Bay City.

Business Embarrassments.

Angola, Ind.—John W. Snyder, a Hardware dealer, has filed a bankruptcy petition at Fort Wayne. He scheduled \$7847.89 of liabilities, with no assets.

Bryan, Texas.—A. B. Carr, Jr., doing a Hardware business, has filed a deed of assignment. The liabilities amount to about \$30,000; assets, \$26,000.

Centerville, S. D.—C. J. Burgland, a Hardware dealer of this city, has failed. Creditors have filed claims amounting to over \$5000.

Galveston, Texas.—E. W. Redding, a retail Hardware merchant, has filed a petition in bankruptcy in the United States Court. His liabilities are \$11,424 15; assets, \$12,025.

Gillespie, Ill.—The firm of Steidley & Weyen have made a voluntary assignment. The assets are \$15,363 and the liabilities \$10,150.

Raleigh, N. C.—Jacob S. Allen, Jr., Hardware merchant, has made an assignment, naming William T. Bowen assignee.

Saco, Me.—John W. Stockman, Hardware dealer, has made a voluntary assignment to Hampden Fairfield of this place. Liabilities are not known and assets are probably about \$5000.

Burglaries in Hardware Stores.

Akron, N. Y.—Akron Hardware Co., \$50.

Bellefontaine, Ohio.—H. H. Prater, \$25.

Clarksburg, W. Va.—D. K. Reed & Co., \$40.

Italy, Texas.—Edward Lloyd, \$150.

Omaha, Neb.—Beaver Bros., \$75.

Phillipsburg, N. J.—David Wise, \$50.

Tacoma, Wash.—Mentzer Bros., cutlery.

Topeka, Kan.—J. N. Henry, knives.

Union City, Tenn.—Lawson-Sears Hardware Co., razors.

Fires in Hardware Stores.

Abbeville, La.—The stock of the Abbeville Hardware Co. has been destroyed by fire. Loss, \$4000; insurance, \$2000.

Blyth, Ont.—J. G. Moser's Hardware store has been destroyed by fire.

Columbus, Mo.—The Hardware stock of the Sherrod-Bradford Hardware Co. has been damaged by fire.

Dassel, Minn.—Peter Rudberg's Hardware stock has been totally destroyed by fire. Loss, \$8000.

Diamond, Ohio.—N. C. Scott's Hardware store has been destroyed by fire.

Dundee, Mich.—Chandler & Engel's Hardware store has been damaged by fire.

Mandan, N. D.—W. B. Haight's Hardware store has been destroyed by fire.

The Blount Door Check

is described in a monthly bulletin of good things
issued by a prominent hardware firm as follows:

"In the light of much knowing of many such devices, we deliberately here and now state, that the Blount Door Check is the *only perfect one* at present correcting man's tendency to leave the door ajar. 'Tis practically all in one piece, is simple, positive in action, wont get out of order—in short, it is "far and away" the best door doctor extant."

On request we furnish to the Hardware Trade attractive folders descriptive of the device and bearing the name and address of the Dealer. The name of this Company does not appear upon them.

ESTABLISHED 1857.

We Want the Earth and We Want it Fenced in.

THE

ELECTRIC DROP STEEL FENCE RATCHET.

Absolute Satisfaction Guaranteed.

THIRTEEN REASONS

Why the Electric Drop Steel Ratchet should
commend itself to you.

(Thirteen is a lucky number you know.)

- 1st. It is simplest.
- 2nd. It is the lightest and strongest.
- 3rd. It is the most compact and rigid; no loose parts.
- 4th. Will tighten any length of wire desired.
- 5th. Adjustable to expansion and contraction.
- 6th. Can be attached to any point on the wire.
- 7th. It will tighten the wire uniformly because it draws equally from each way.
- 8th. Can also be used as a post ratchet by attaching a wire loop in the end to encircle the post.
- 9th. Can be used on any kind of post, either wood or iron.
- 10th. No extra expense in preparing posts, which is necessary when post ratchets are used.
- 11th. When wire becomes loose or sags from use, it can be instantly tightened.
- 12th. No special wrench required; any wrench on the farm will operate it.
- 13th. The most important feature; it can be bought for **LESS** Money than any other good ratchet on the market.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, over the country are requested to contribute to this page News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Etc.

Altoona, Pa.—Wolf Bros. and a party of Eastern capitalists will erect a powder mill and mining supply manufactory at Tinton, Blair County.

Anderson, Ind.—The Universal Filing Tool Co. has been incorporated with a paid-up capital stock of \$10,000. The stockholders are Edward S. Lee, of Elwood; James A. Van Osdol, Thomas and Horace Stilwell, C. R. Brown and F. M. Makepeace, of this city, and J. E. Johnston, of Muncie. The company holds the patent for an electric filing tool.

Brooklyn, N. Y.—The Fresh Pond Glass Mfg. Co., of Williamsburg, has been incorporated. Capital \$6000. Directors: Nicholas Bach, Victor Seidlinger and George Oehrlein, of Brooklyn.

Chicago, Ill.—Daniel Carmichael Range Co. has been incorporated. Capital stock, \$2500. Incorporators: Daniel Carmichael, O. D. Swearingen and John Bierma.

Cleveland, Ohio.—Cleveland capitalists have organized the Painesville Metallic Binding Co., and started a manufactory at Painesville, Ohio. The company will manufacture zinc and brass oilcloth binding, stair plates and matting ends.

Dover, Del.—Delaware Paint Co., Wilmington, has been incorporated to manufacture and sell paints. Capital, \$50,000. Incorporators: T. Tutnall, J. Richardson, Jr., both of Wilmington; G. W. Stevenson, of Camden.

Easton, Pa.—The Bangor Excelsior Slate Co. has been incorporated. Capital, \$250,000. Directors: Robert F. Brown, H. J. Steele, Birge Pearson, E. R. Armstrong, Easton; C. Miller, Nazareth.

Joliet, Ill.—Finley Lawn Rake Co. has been incorporated; capital \$10,000. Manufacture and dealing in machinery. Incorporators: John O. Barrot, T. A. Mason, Charles E. Finley.

Keithsburg, Ill.—The Secretary of State has issued papers of incorporation to the Stoutenberg Mfg. Co., with a capital stock of \$10,000. The company will manufacture lubricating oil cans.

Minneapolis, Minn.—The Northern Paint Co. have filed articles of incorporation. The capital is \$50,000, and the incorporators are A. J. Galbraith, F. B. Platt, F. W. Hurty and R. A. Kirk, of St. Paul, and H. C. Tracy, of Minneapolis.

Monroe, Ga.—The Monroe Handle Co. will soon begin the manufacture of handles for rakes, forks, hammers, hatchets, axes, picks and brooms, and will ship these goods to all parts of the country.

Oxford, Mich.—Harris Wire Fence Co. has been organized with Dr. Henri G. Ide as president and Willis D. Miller, vice-president; Sanford R. O'Brien, treasurer,

and Wm. D. Hollister, secretary. The capital stock is \$30,000, and fully paid up.

Pontiac, Mich.—A company, capitalized at \$50,000, has been organized to manufacture cultivators, land rollers, bean harvesters, bob-sleighs, three-horse equalizers and harrows. R. D. Wells, Milford; E. Howland, Louis Holser, Charles Stambaugh and Charles Howland, of Pontiac, are the directors. The company is having plans prepared by a Detroit architect for a four-story brick building, 120x80 feet, to be erected at the corner of Pike and Garland Streets.

Port Clinton, Ohio.—Port Clinton Basket Co. has been incorporated to manufacture baskets. Capital, \$15,000. Incorporators: H. B. Magruder, J. Berlemans, E. Wennell, H. Schenck, W. Kelly.

Syracuse, N. Y.—George T. Tomlinson Co. has been incorporated; manufacturing gun cleaners, etc. Capital, \$5000. Incorporators: G. T. Tomlinson, I. J. Tomlinson, C. R. Gray, all of Syracuse.

Syracuse, N. Y.—J. S. Kemp Mfg. Co. has been incorporated, to manufacture farm implements. Directors: John S. Lewis, Katharine L. Kemp, Frank L. Walker and Joseph L. Kemp, of Syracuse.

Weissport, Pa.—The Lehigh Valley Emery Wheel Co. have been granted a charter by the State of Delaware, empowering them to manufacture emery wheels, boilers, heaters, ranges and castings. The incorporators are Philadelphians, and the capital stock is \$30,000.

West Troy, N. Y.—Covert Mfg. Co. has been incorporated. Saddlery Hardware business. Capital, \$50,000. Incorporators: J. C. Covert, Ellen E. Covert, F. W. Covert, all of West Troy.

Williamsburg, Pa.—The Crescent Powder Co., financed by Pittsburgh and New Castle capitalists, has begun business in this town.

Worcester, Mass.—A factory is being equipped at No. 3 Foundry Street, for the manufacture of the Lord patent saw file, Peter Lord, inventor. Joel Witter and Charles S. Park have formed a partnership under the style Lord, Witter & Park, and will soon put the Lord file on the market. The firm has leased 6000 square feet of factory room.

Changes and Improvements.

Chicago, Ill.—The Chicago Tool Co. have signed a contract to locate their works at Winthrop Harbor. The concern manufacture heavy machinery tools, and will employ 100 men. Five acres of ground has been purchased as a factory site, and the work of construction will commence at once.

Granite City, Ill.—The National Enameling & Stamping Co. have moved their switch tracks to a further distance from the factory. A large shipping platform, extending the whole length of the building, is being constructed.

Middletown, Pa.—The plant and machinery of the Raymond & Campbell Mfg. Co.

have been sold to Alexander Balfour, of Philadelphia, for \$34,200. The patterns, stoves, etc., were also purchased by the same. The entire sales aggregate about \$50,000. Mr. Balfour has appointed J. F. Raymond to look after the interest of the plant.

Peoria, Ill.—The Culter & Proctor Stove Co. are extending their business in every direction, their latest move in that way being the establishment of a branch concern in Minneapolis.

Saugatuck, Conn.—The Smith Machine Co., which make the scales for the Dayton Cash Register Co., have found it necessary to increase their business so materially that it has been necessary to move into larger quarters.

Sheffield, Ala.—Increased business has made it impossible for the owners of the Sheffield Stove & Foundry Co. to enlarge and improve their plant. To this end the capital stock has been increased from \$10,000 to \$20,000, and the capacity will be doubled. A contract has been let for the construction of a brick warehouse, 50x100 feet, and work thereon will be begun at once.

Warren, O.—The Warren Hardware Co. expect to have the new building at their range works ready for occupancy early in February.

Recent Fires.

Cuba, N. Y.—The W. A. Bates Mfg. Co.'s plant for the manufacture of butter tubs, oil and shipping cans, anti-rust tinware, butter and lard pails and tinware specialties, has been destroyed by fire, only the wood-working shop being saved. The buildings burned covered an acre of ground, and the loss, including machinery, raw material and manufactured stock is over \$50,000, with insurance for about half that amount.

Mayesville, Ky.—Fire was discovered recently in the machine shop of the James P. Hall Plow Co.'s works. It had gained considerable headway, spreading in several parts of the large factory before the fire department arrived. It was two hours before the fire was extinguished. The damage to building and contents is between \$5000 and \$6000. Origin of fire unknown. No insurance.

New Brunswick, N. J.—The plant of the Consolidated Fruit Jar Co. has been destroyed by fire. Loss, \$30,000.

Pittsburgh, Pa.—The plant of the Duquesne Mfg. Co., makers of stoves and gas appliances, has been destroyed by fire. Loss \$75,000.

Racine, Wis.—The Racine Nail & Tack Co.'s factory, located in the northwestern part of the city, has been destroyed by fire. The capital stock of the concern is \$50,000. Secretary and treasurer S. L. Jackson states that the machinery was worth \$20,000, and the stock and buildings \$30,000. On the whole there was an insurance of \$20,000, distributed in several agencies.

New Companies, Agencies, Etc.

Charleston, W. Va.—A charter has been issued to the Baltimore Arms Co. of Baltimore, Md., composed of Burr H. Richards, B. Howard Richards, Jr., John Prossor Tabb, Joseph B. Pleasants and John Lloyd Tabb, all of Baltimore. The authorized capital is \$500,000. The company will manufacture and deal in firearms.

Denver, Colo.—Articles of incorporation have been filed with the Secretary of State of the Colorado Automatic Cycle Pump Co., to operate in Denver, with a capital of \$30,000. The incorporators of the company are: Daniel B. Ellis, Merritt W. Gano and George B. Dewey, well known in Denver business circles and among wheelmen. It is stated to be the purpose of the company to manufacture, buy, sell, operate and control machines or devices for furnishing air to pneumatic tires upon wheels of bicycles, vehicles, etc.

Louisville, Ky.—Articles of incorporation have been filed by the Cook Automatic Fishing Reel & Camp Supply Mfg. Co. The capital stock is placed at \$5000.

Norristown, Pa.—Henry S. Butz has organized the Butz Fish Hook Co., with a capital stock of \$20,000. George C. Hazleton, of Philadelphia, has been elected president of the company.

St. Paul, Minn.—The St. Paul bicycle dealers at a recent meeting at Central Hall

effected a permanent organization, with the election of the following officers: President, Tom L. Bird; vice-president, T. C. Borg; secretary, A. J. McCollum; treasurer, William Johnson.

Trenton, N. J.—The Wells Phonograph & Cycle Supplies Co. has been incorporated. Capital, \$50,000. Incorporators: J. A. Wells, Carrie A. Hobart, both of Huntingdon Valley, Pa.; J. G. Reeves, of Camden, N. J.; L. Buehn, W. F. Smith, both of Philadelphia.

Westerly, R. I.—C. W. Willard has again taken the agency for the Crawford and Imperial bicycles.

Changes and Improvements.

Eureka, Cal.—Paul E. Keller, the well-known sporting goods man, who for the past sixteen years has represented the firm of E. T. Allen & Co., is now traveling in the interests of a new firm in the sporting goods line. During the latter part of December the Allen Co. sold its business to Miller, Sloss & Scott, and Mr. Keller was employed by the Hardware firm of Durham & Carrigan, who have lately added a sporting goods line to their business. The stock was purchased in New York under the supervision of Mr. Keller.

Marshall, Mich.—The Royal Cycle Works have started operations for the season with A. E. Bacon as manager. It is the intention to manufacture 2000 wheels this year.

St. Edward, Neb.—The St. Edward Cycling Co. is building a two-story building on West Beaver Street to accommodate their increasing trade.

Reading, Pa.—New York and Chicago investors have inspected the Wilhelm bicycle plant at Hamburg, Pa., to lease or purchase.

Tremont, Me.—Sim Mayo is enlarging his bicycle shop.

Recent Embarrassments.

Brooklyn, N. Y.—John Kopf, a manufacturer of fish hooks and fishing lines at No. 55 Johnson Avenue, has filed with the clerk of the United States District Court his petition in voluntary bankruptcy. He schedules forty-five creditors with claims amounting to \$10,697.71, and values his assets at \$67.50.

Recent Fires.

Norwich, Conn.—The large building of the Hopkins & Allen Mfg. Co., together with their entire stock of pistols, revolvers, rifles and other firearms, with valuable machinery have been destroyed by fire. Loss, \$300,000.

Quincy, Mass.—The stock of sporting goods of Hans Hanson has been destroyed by fire.

Miscellaneous.

Norwich, Conn.—At the annual meeting of the Hopkins & Allen Arms Co. the following directors were elected for the ensuing year: C. P. Cogswell, A. H. Brewer, C. B. Lee, C. H. Osgood, F. T. Brown, H. A. Briggs, S. S. Hopkins. At a subsequent meeting of the directors the following officers were elected: President, C. P. Cogswell; vice-president, A. H. Brewer; secretary and treasurer, C. B. Lee.

Where the "First Bicycle" Was and Was Not.

The Pope recently, in granting permission to priests to use bicycles, took occasion to announce that the wheel was invented by Abbe Painton, who used it in 1845. E. R. Shipton, secretary of the Cyclists' Touring Club, asserts that the first machine was invented by a Scotchman in 1846. Another cycling historian asserts that, strictly speaking, no one invented the bicycle—"it just grewed," the bicycle being the developed result of a long series of mechanical contrivances for the acceleration of individual motion, and its beginnings are of older date than many people imagine.

In August, 1665, John Evelyn, on his way back to London from his home at Wotton, called at Durdano, near Epsom, and afterward noted in his diary that he had found Dr. Wilkins, Sir William Petty and Mr. Hooke "contriving chariots, new rigging for ships, a wheel for one to run races in, and other mechanical inventions. Perhaps three such persons together were not to be found elsewhere in Europe for parts and ingenuity." What was this wheel in which one could run races? It is impossible now to say, but the description is curiously suggestive of some contrivance of the cycling kind.

Another one hundred years were to pass before anything resembling the modern cycle was to be invented. The first velocipedes, as they were so long called, appear to have been made in France. In the *Journal de Paris*, of July 27, 1779, there is an account of a velocipede invented

by MM. Blanchard and Magurier, which seems to have been a clumsy affair of four wheels, carrying two people and very heavy to work. This invention was a false start. No one followed it up or improved upon it, and no further attempt in this direction was made for some thirty or forty years. Then appeared the "dandy horse," upon which our fathers and great-grandfathers disported themselves gaily, albeit at times a trifle laboriously, for a brief season. When the crank was first invented, or who invented it, is not by any means certain. The date must have been early in the present century, but who first hit upon it is quite unknown. It was possibly first attached to a three-wheel machine.—*The Wheel*.

Coal Ashes for Mortar.

Mortar composed of nine parts of fine anthracite ash intimately mixed with one part of fresh lime and properly moistened with water will, when one month old, give an average strength of 65 pounds to the square inch, as compared with fifteen pounds per square inch in the case of mortar composed of lime and sand. The crushing strength is seven times greater than ordinary mortar, being in some cases as high as 1000 pounds when extra care was taken in preparing the mass. It offers a great resistance to fire, and does not break and crumble away when suddenly cooled by water, as does mortar made in the old way. The best results are obtained when the ashes are finely sifted and the lime and ashes are well mixed and worked together.—*Exchange*.

"WE GO FIRST CLASS OR NOT AT ALL."

The Queen Freezer combines all the requisites for an absolutely first-class freezer.

FIRST.—The time of freezing is less than any other freezer made— $1\frac{1}{2}$ to 3 minutes for uniform hardness.

SECOND.—Ease of operation—a child can hold and turn it from first to last, and the finish is scarcely harder than the start.

THIRD.—Simplicity and ready assembling of parts. The Queen can be and has been put together by those handling it for the first time, in one-fifth of the time it took the same parties to put together a freezer with which they had been familiar for years.

FOURTH.—Each casting bears its own distinctive number, so that reference to an extended diagram of repair parts is quite unnecessary.

FIFTH.—The parts are self-adjusting. The hood, or cross piece on the top, falls readily into place, being guided unfailingly into position by the guiding plate on the under side of the cross piece. The dasher is also self centering, and even if the freezer is started with the dasher out of its central position in the can, a short turn of the crank at once brings it into its proper place.

SIXTH.—The quality of ice cream, ices, etc., produced is absolutely unequalled. In no other freezer does the mixture become so thoroughly light, free from all lumps and "silky."

SEVENTH.—No "priming" or setting away of the cream to "ripen" is necessary—one can eat it right out of the can and find it as palatable as after an hour or two's delay required in other freezers.

EIGHTH.—The Queen will, from the same quantity of material, produce a larger amount of frozen cream than any other freezer.

ALL TUBS AND CANS ARE FULL SIZE.

SAMPLES
 BY MAIL.

IN our patent loop joint hinge, one part of the loop is made rigid to one-half of the hinge, making the strongest, neatest and best hinge for the purposes mentioned.

Our patent fastening plate and catch which go with the hasp are so perfect in their construction that the catch never gets loose from the plate, as is often the case with others on the market.

When desired, we furnish our hasp and catch with a small hole through each, so that a wire can be inserted and then sealed by use of a lead seal.

IF YOU WANT TO KNOW ASK US

How to file Catalogues, quotations and every class of data, with no more trouble to file than to throw in the waste basket, and as easy to get when wanted as though in your vest pocket.

FOLDING PAPER BOX CO., South Bend, Ind.

"GIVE YOU YOUR MONEY'S WORTH."

Coldwell Lawn Mower Co., Newburgh, N. Y. [*Lawn Mowers*]: We think **HARDWARE** is enterprising, pushing, up-to-date, so to speak, and has a certain amount of get-up-and-get spirit about it, combined with a certain flavor of "I give you your money's worth when you advertise with us," that we like it—not for fun or sentiment, but for real business, and so long as you continue thusly you can count on our continuance.

"WANT TO DIGEST THEM AT HOME."

Simmons Hardware Co., St. Louis, Mo. [*General Hardware*]: Enclosed please find \$2.00, being subscription for two copies of your paper for one year, one of which you will please mail to E. C. Simmons, No. 2727 Olive Street, St. Louis, Mo. The other to A. W. Douglas, No. 2845 Lucas Avenue, St. Louis, Mo. They are for use at the store but we want to digest them at home before we bring them here.

"WE GO FIRST CLASS OR NOT AT ALL."

The Queen Freezer combines all the requisites for an absolutely first-class freezer.

FIRST.—The time of freezing is less than any other freezer made— $1\frac{1}{2}$ to 3 minutes for uniform hardness.

SECOND.—Ease of operation—a child can hold and turn it from first to last, and the finish is scarcely harder than the start.

THIRD.—Simplicity and ready assembling of parts. The Queen can be and has been put together by those handling it for the first time, in one-fifth of the time it took the same parties to put together a freezer with which they had been familiar for years.

FOURTH.—Each casting bears its own distinctive number, so that reference to an extended diagram of repair parts is quite unnecessary.

FIFTH.—The parts are self-adjusting. The hood, or cross piece on the top, falls readily into place, being guided unfailingly into position by the guiding plate on the under side of the cross piece. The dasher is also self centering, and even if the freezer is started with the dasher out of its central position in the can, a short turn of the crank at once brings it into its proper place.

SIXTH.—The quality of ice cream, ices, etc., produced is absolutely unequalled. In no other freezer does the mixture become so thoroughly light, free from all lumps and "silky."

SEVENTH.—No "priming" or setting away of the cream to "ripen" is necessary—one can eat it right out of the can and find it as palatable as after an hour or two's delay required in other freezers.

EIGHTH.—The Queen will, from the same quantity of material, produce a larger amount of frozen cream than any other freezer.

ALL TUBS AND CANS ARE FULL SIZE.

FENCE
RATCHET.**
Absolute Satisfaction Guaranteed.**THIRTEEN REASONS**

Why the Electric Drop Steel Ratchet should commend itself to you.

(Thirteen is a lucky number you know.)

- 1st. It is simplest.
- 2nd. It is the lightest and strongest.
- 3rd. It is the most compact and rigid; no loose parts.
- 4th. Will tighten any length of wire desired.
- 5th. Adjustable to expansion and contraction.
- 6th. Can be attached to any point on the wire.
- 7th. It will tighten the wire uniformly because it draws equally from each way.
- 8th. Can also be used as a post ratchet by attaching a wire loop in the end to encircle the post.
- 9th. Can be used on any kind of post, either wood or iron.
- 10th. No extra expense in preparing posts, which is necessary when post ratchets are used.
- 11th. When wire becomes loose or sags from use, it can be instantly tightened.
- 12th. No special wrench required; any wrench on the farm will operate it.
- 13th. The most important feature; it can be bought for Less Money than any other good ratchet on the market.

Eclipse Refrigerator Works, Burlington, Vermont.

HARDWARE

On reference to our editorial page among the names of *Hardware's* official staff will be found that of A. P. Mitchell, recently elected secretary and treasurer of the Hardware Publishing Co., in the place of E. N. Root, who has faithfully filled that position since the foundation of the paper. Mr. Mitchell is the son of Archibald Paull Mitchell, the founder of *Hardware*, and commences thus early in his commercial career to master the problems of successful business achievement in order to continue the fortunes of *Hardware* on the principles and precepts laid down by its founder.

At a meeting of the Board of Governors of the Hardware Club February 16th, a committee of five consisting of the following members Thomas J. Atkins, chairman; Frederick Topping, Joseph A. Marsh, Lee Kohns, Francis B. Griffin were named to nominate five governors who are to serve for the ensuing three years. Their choice will be presented to the club for action at the annual meeting to be held March 17th next.

William Terrill Johnson, who for several years was the buyer for the important Hardware Department of Charles B. Rouss, New York, has accepted the prominent position of principal Western traveling representative for the American Axe & Tool Co., New York, and is now away on his maiden trip in their interest. The buyers, whom it will be his pleasure to meet and receive orders from, will find him a gentleman of parts in all the name implies, having a host of friends, who wish him every success in the intelligent field of trade usefulness which he has selected.

In addition to the selection of sewing machines for the future business of the Hardware trade, many leading houses have found that a good business can also be done in handling typewriters. The Logan-Gregg Hdw. Co., Pittsburgh, who are selling the "Oliver," already point to four leading manufacturers of their city and vicinity to whom 87 have been disposed of, which, it would seem, should impress a hesitating dealer as to the selling merits and other advantages of this new department in the 20th century "Hardware" stock.

Among the handsome calendars distributed this year to the buyers of Hardware and sporting goods, we have accidentally omitted any previous mention of the golf calendar forwarded by the Bridgeport Gun Implement Co., Nos. 313-315 Broadway. The characteristic illustrations of the golf players which ornament the calendars are well drawn and handsomely colored. This company announce their willingness to mail free a book of instructions in this seductive and popular sport.

E. C. Atkins & Co. This great saw manufacturing firm are now adding two large buildings to their already extensive plant at Indianapolis, Ind. One of these buildings is to be about 60 x 90 feet, four stories high, and devoted exclusively to the manufacture of hand saws. The other building will be about 40 x 150 feet and three stories high, and will be known as the wood-working department. They will manufacture everything in the way of hand saw handles, cross-cut saw handles, buck-saw frames and other goods of that character. The capacity of the Atkins plant will thus be very largely increased in the departments mentioned.

At the annual meeting of the Russell & Erwin Mfg. Co., held at New Britain, Conn., on February 7, the following officers were elected: Geo. J. Loughton, president; L. H. Wales, treasurer; Theo. E. Smith, secretary; Isaac D. Russell, assistant secretary.

Eugene B. Higgins, for a number of years with M. W. Robinson Co., No. 79 Chambers street, is desirous of representing a few manufacturers of Hardware specialties, and has established his headquarters at No. 20 Reade street, where he hopes to hear from manufacturers wishing New York representation.

In another part of this issue of our paper will be found an advertisement offering for sale the long-established Hardware store of Griswold, Maloney & Co., Elmira, N. Y. To those contemplating the advantages of entering the Hardware industry at the present time an opportunity like this should be followed up.

As will be noticed in their advertisement on our front cover, the American Machinery & Trading Co., have established their head office in the Bowling Green Building, New York. This important company will soon make their presence felt in industrial circles, being thoroughly equipped to supply new companies, or those engaged in extending inadequate facilities, with all the first-class equipment necessary to complete their entire requisitions in a limited time after receiving plans and specifications.

Underhill, Clinch & Co., No. 94 Chambers Street, New York, have recently issued a list of the agricultural tools carried in stock by them. It includes Coldwell Lawn Mower Co.'s hand and horse lawn mowers, Sheble & Klemm's forks, and in addition well assorted lines of grass hooks, trowels, hoes, rakes, rubber hose, scythes, snaths, scythe stones, and a variety of pruning and garden shears, shovels, spades and scoops, axes, picks and a miscellaneous lot of implements. In another list they refer to the American Screw Co.'s list of wire nails, and include a miscellaneous list of wire nails in compact form.

It is stated that Postmaster-General Smith and Third Assistant Postmaster-General Madden have perfected a plan to sell postage stamps in book form. Two cent stamps will be offered for sale in books of 12 stamps at 25 cents. The books will be of a size convenient to slip into the vest pocket, with wax paper between the stamps.

Harrison Bros. & Co., Inc., Philadelphia, start the new year in record style. We learn that the demand for the products of these leading manufacturers has reached such proportions their increased facilities for producing these goods are taxed to the utmost. This fact clearly demonstrates in a high degree the popularity of the products bearing the name of "Harrison," and every effort is being made to make them still more popular. The most direct appeal to be made to dealers desirous of selling white lead, colors, paints or varnishes of established reputation, is the fact that they possess a popularity which enables them to hold the market and challenge competition.

HARDWARE

VOL. XX

FEBRUARY 25, 1900.

NO. 10.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the **HARDWARE PUBLISHING CO., No. 143 CHAMBERS ST., NEW YORK.**

Subscription, \$1.00 per year.

Subscription, Foreign, \$1.50 per year.

L. E. MITCHELL,	-	-	President.
A. P. MITCHELL,	-	-	Secretary and Treasurer.
W. C. BRUNDAGE,	-	-	Business Manager.
HENRY HOPKINS,	-	-	Editor.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

Editorial Trade Review.

Satisfactory conditions are everywhere prevailing. The heavy fall of snow enabled the dealer to work off some of the belated stock of boys' sleds, snow shovels and sidewalk cleaners. The fact that the workmen of the country are fully employed has a corresponding effect upon the steady trade, which instead of diminishing in strength will increase in vigor as the season advances and wants develop.

Some descriptions of raw material are still difficult to obtain; perhaps some few of the old orders are being filled to a limited extent that will not make present business unprofitable. It is perhaps just as well if some factories are a few months behind, for there are several people who are awaiting the time when all orders now booked shall be cleaned up and when the prognosticated drop in prices it is hoped will take place—which may the fates postpone to an indefinite period—for it will indicate a glut of goods and a famine of orders.

The salvation of the situation must not be lost sight of; the safety valve for the control of the boiler of production is in the export demand for the products for which foreign markets furnish us a field to cultivate. Don't let us sag into the old-time methods of neglecting this vast outlet, only to kill the home markets by selling at prices unproductive of profit, simply to beat a rival out of an order he already had a grip on.

It was Charles Lamb who, when an obstreperous individual was going to be cast from a theatre gallery for some objectionable action, said: "Don't waste him; kill a musician with him!" So, don't let us throw away anything unnecessarily; let us capture a foreign market and charge up the loss, where there is any, to the foreign missions.

When it is remembered how great a pressure was made last year to create abnormal stocks for the Hardware jobbers by speculative purchases, it would cause slight surprise to know that in some lines a fair stock is in evidence to-day, but different from any previous season in which a similar state of affairs was noticeable. There is no disposition to sell at bargain quotations, especially when a large body of the trade are keeping the manufacturers busy in creating the same goods. The excess of stock simply curtails the orders anticipated for the opening of the Spring season and furnishes a fear that trade in manufacturing circles will soon be dull.

Under any condition of affairs there will be a famine among some classes of goods, especially those which, like wire cloth furnish the raw material upon dependent products such as screen doors and window screens, independently of a steadily growing traffic in the store trade of the cloth itself.

The prophecies during several months past in several trade journals as to a lower trend in prices of Hardware, if followed at all by the unreflecting jobber, will find him bare of stock at an early date, while his optimistic competitor is banking his shekels and priding himself on his business acumen, which really was only a confidence born of the wants of a purchasing public. There is no great possibility of any demoralizing decline when the prices on so many leading goods even now have scarcely reached the prices on an average prevailing a decade ago. Even the large profits credited in millions of dollars to such large industries as Carnegie's steel works and similar aggregations of capital, spring principally from the phenomenal production from unrivalled facilities running into the hundred thousands of tons, on which the ratio of profits may not be an alarming percentage on gross value. With the industrial population of Great Britain, our most aggressive competitor in the markets of the world, largely drawn upon to fight her campaigns in South Africa, the effect upon our industrial strength should not indicate a waning power in the immediate future.

Conventional Culture.

The numerous State Conventions of retail Hardware dealers with which the days of this short month have been filled, convey a satisfactory idea to the close observer of the trade conditions of the present day.

There was a time when the Hardware dealer of a growing town was a quiet, conservative gentleman, working hard early at morning and late at night, and making money; but beyond reading his trade journal in his endeavor to keep posted on bottom prices, made no great amount of noise, and grew wealthy and sometimes died a benefactor to the human race.

The present epoch finds him in convention assembled, full of schemes and projects to do a safe and profitable business and willing to convey to his competitor in business the desirable method by which he expects to accomplish the best results, but anxious that his competitor will be governed by motives equally as honorable and as deserving of success.

That a much more satisfactory state of affairs will result from such intelligent treatment of current propositions and modes of thought goes without saying. The wheels of successful trade move without friction, and friendly feelings and fraternal discussions bring into closer and more harmonious relations the several dealers in each of the various towns. Their interests are identical, there is business enough for all, and bickerings and jealousy no longer drive the trade away to receive a heartier welcome in a neighboring community where, as was formerly the case, deceptive quotations and short weight too frequently formed the foundation for a change of patronage.

The Hardware dealer of the present day is a student of the possibilities of the future. Attractive methods and a magnetic personality are the advantages springing from association with other bright minds ever on the alert for the careful buyer who wishes honorable

treatment, good goods and prices as low as can be obtainable from any other source.

Cobwebs no longer festoon the store windows of the Hardware dealer, for they become his best advertisers. He is fully alive to his opportunities for profitable transactions if not harried by senseless competition; and by organization he secures the whole profit to which legitimate business should entitle him, and can look his competing neighbor in the face after opening an account with his pet customer, knowing that no under-hand devices or tricky methods were indulged in to secure this business advantage over a rival.

The profits due the dealer should be garnered by honorable competition. Certain lines of goods of slow sale should bear a larger proportion of profit than those general every-day lines which racket and department stores make prominent by local advertising, and this method of "fighting the old boy with fire" can be accomplished only by systematic co-operation with sensible competitors who are endowed with good judgment and correct principles inculcated by attending conventions and learning wisdom by example.

Let the good work continue; every recurring convention adds largely to the number of those willing to be thus enlightened, and the old-time barriers of selfish advantage created by statements bordering on the deceptiveness, which indicates a low order of morality, can truly be considered as banished from the business of the present. We may even look to a millennium when "overs" will be reported as zealously as "shorts," and general Hardware will never again masquerade as "Iron Bolts" to make a freight bill easier to cancel.

Death of Edward Failing.

Edward Failing, a member of the Hardware firm of Corbett, Failing & Robertson, Inc., Portland, Ore., died at his residence on the 29th ult. Mr. Failing was born in New York City, December 18, 1840. His father, the late Josiah Failing, and two older brothers left New York for Oregon in 1851, establishing the house of J. Failing & Co. Edward Failing joined them in 1853, going to Oregon by way of Cape Horn, in company with his mother, sister and younger brother. After attending school in Portland, where he spent a few years in finishing his education, he became clerk for H. W. Corbett, then in the general merchandise business. In 1867 he became one of the partners of the firm of H. W. Corbett & Co. On January 1, 1871, Henry Failing and Mr. Corbett consolidated their business, forming the firm of Corbett, Failing & Co., which included John A. Hatt, Marshall B. Millard, Edward Failing and James F. Failing, as junior and active partners, conducting a wholesale Hardware business. This firm, with but a few changes in partners, continued until January 1, 1893, when their business was consolidated with that of Foster & Robertson, forming the present corporation of Corbett, Failing and Robertson, Inc. Mr. Failing's health failed him about a year ago, while acting as manager of the corporation, and compelled him to resign, although he still retained an interest in the business.

He was married in August, 1866, to Olivia B. Henderson, who, with nine children, survives him. The *Morning Oregonian*, of Portland, referring to his death, pays him the following tribute:

Edward Failing was a rare type of a man. He was high-minded, clean and absolutely honest, and he always did what he knew beyond question to be right. No power could move him to do that which his conscience did not approve. He belonged to a mercantile school, unfortunately small nowadays, which regards business as a personal trust, not a warfare; which stamps as a counter-

feiter a merchant who employs trickery or deception. He made friends slowly, but he held them all. In his business habits he was methodical. To unflagging industry he added keen intelligence. He was kind-hearted, generous and pure.

Edward Failing was a well-read man. He devoted much time to the best books. History was his chief delight, and he pursued its study assiduously until his last illness. He was a thorough Oregonian, and had complete knowledge not only of her annals, but of her traditions and the forces which made this commonwealth. His was a disposition which shrank from strong public gaze, and he preferred, away from business, the seclusion of his home. His moral fiber was of the finest, and he stood in the mercantile community for the very best.

Wyeth Hardware & Mfg. Co's Catalogue.

The Wyeth Hardware & Mfg. Co., St. Joseph, Mo., have recently issued a new catalogue for their 1900 business. It is the finest they have placed before their customers, and shows on every page a degree of care in compilation and wealth of illustration rarely met with in a catalogue of this size. It consists of nearly 900 pages, 10x12 inches in size, printed on superior paper of good weight, and of a quality that enables them to show half-tone illustrations in a favorable way to illustrate the finer grades of Builders' Hardware now dominating the market. The pages are laid out in a manner that enables them to condense a number of cuts on each page, with a minimum of description, but covering several thousand illustrations. Connected with the volume is an extensive index covering 4000 items, and making everything in the catalogue convenient and easy of reference. It is the custom of this company to issue special catalogues during the year at special seasons, covering such lines as fishing tackle, sporting goods, cutlery, bicycles, etc., and in this elaborate volume these lines are combined as nearly as possible for illustration in a way to bring such classes of goods all together. Manufacturers' lists and numbers have been used as far as it is possible to avoid repetition, and although no discount sheet accompanies the catalogue because of the frequent changes that would make a discount sheet impracticable, the company state that they are at all times pleased to quote prices on any line of goods which they carry in stock. Each of the many departments is classified in the portion of the catalogue reserved for them. Included in the line of goods represented in their pages, is a full line of house-furnishing goods, silver-plated ware, table and pocket cutlery, scissors and shears, guns, ammunition and sporting goods. They are also large dealers in sewing machines, which are illustrated as well. The index referred to above covers 22 pages, in which everything shown in the catalogue under every possible name is classified, so that except in very rare cases a single reference only is needed under any letter to find the article required.

In the illustration of their line of Builders' Hardware, their is an arrangement that is original with this style of catalogue. The Builders' Hardware department opens with a half-tone cut of a sample trunk display, showing a dozen superb designs manufactured by the Russell & Erwin Mfg. Co. The page following this gives in a very graphic manner a description of the finishes and the names under which they are marketed by this concern, showing them in their natural color just as they appear, whether Barff finish or antique copper. This is a page of solid instruction. The line of Builders' Hardware that follows is shown on separate pages in various patterns, a line of Russell & Erwin's Hardware, each page showing the entire line of goods, from plate escutcheon or sash lift up to the larger escutcheon and knob suitable for a front door. On the page facing the illustrations in every instance are given the catalogue number, description and size and list price. This arrangement is particularly convenient for the architect or other buyer, who is enabled to see at a glance

the general appearance and approximate cost of each particular design that may be selected. This shows a systematic arrangement that is worthy of commendation, being thoroughly up-to-date. Judging by the contents of this catalogue, we should say that the Wyeth Hardware & Mfg. Co. were capable of catering fully to a large territory and we congratulate their customers on having so helpful a volume from which to make their selections.

LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law,
No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 143 Chambers Street, New York City.

QUESTION.—I have been delivering goods to a man who has recently gone into bankruptcy. Our agreement was that I should send him goods, and he was to sell them as my agent, and collect the proceeds of the sales, and turn them over to me as collected. In return for his services I paid him a certain commission on the sales. This man has received my goods, amounting to \$500. He has sold them, and has collected the money for them, but he refuses to turn the money over to me, and says that I must file my claim with the other creditors, and receive about ten cents on the dollar instead of the amount due me. Is there any way I can get more than ten cents on the dollar on my claim?

REPLY.—Under the present bankruptcy act there are certain debts which are not affected by a discharge of the bankrupt. Among these debts are those which "were created by his fraud, embezzlement, misappropriation or defalcation while acting as an officer or in any fiduciary capacity." The question as to whether or not the one who refuses to pay over money collected while acting in the position you describe has misappropriated funds while acting in a "fiduciary capacity," within the meaning of this section of the bankruptcy act, is one which still remains in some doubt. There is authority for the statement that a debt of this nature will not be released by the discharge of the bankrupt. We are of the opinion, however, that the weight of authority is the other way, and that the refusal of a person, acting as described, to turn over money will not be considered as a misappropriation of funds within the meaning of this particular section of the bankruptcy act. We know of no other course for you to pursue than to file your proofs of debt, and take your pro-rata share with the other creditors.

QUESTION.—A firm delivered goods to us, and after we had inspected them we wrote the firm, stating that the goods were not as represented. We received a letter in answer to ours, declaring that the goods were as agreed upon between us. We still maintained that the goods were faulty, and inclosed our check for what we considered the real value of the goods, stating in our letter that the check was in settlement of the account between us. This check the firm cashed at once. They now demand payment of what they claim to be the balance due them. What should we do about this matter?

REPLY.—We would not advise the payment of this balance. The fact that you wrote your creditor that you inclosed your check in settlement of the account between you, and the fact that the firm accepted and cashed your check for the amount you considered due would preclude them from claiming a balance to be due. If the firm desired to hold you to the balance claimed by them they should have returned your check and refused to accept the settlement thus offered. The use of the check was in itself an acceptance of the conditions upon which it was sent.

QUESTION.—I made an oral agreement some time ago with a firm to take a shipment of shovels and galvanized ash barrels, amounting in all to about \$150, the goods to be delivered on or before March 30, 1900. I have since learned that the goods furnished by this firm have in several instances proved to be of poor quality, and that it was very difficult to obtain any redress from them. I therefore notified them at once that I would not accept the consignment, and instructed them to cancel the order. They re-

plied that they would hold me to my contract. Kindly inform me what would be my standing in case suit was brought.

REPLY.—The Statute of Frauds in this State provides that all contracts for the sale of goods, wares and merchandise for \$50 or upwards are void unless some note or memorandum of such contract be made in writing, and subscribed by the party to be charged, or unless the goods are accepted, or a part payment be made by the purchaser thereof. If, therefore, you made no part payment, and if no part of the goods were accepted by you, the contract is of no effect, and is unenforceable against you.

QUESTION.—Am I entitled to interest on a demand note, and, if so, at what rate; nothing having been said about interest in the note.

REPLY.—As a general rule a note does not bear interest from the day of its date, unless the fact that interest is to be paid appears on the face of the note. When, however, the note falls due, and is not paid, interest at the legal rate begins to run. A note payable on demand is due from the day of its date. Interest at the legal rate would, therefore, run from that date.

New England Hardware Dealers' Association.

The regular monthly meeting of the above Association was held at the United States Hotel, Boston, on Wednesday, February 14th. The business before the meeting was the election of officers for the ensuing year; and that, combined with the fact that William Chamberlain, of the Emery-Waterhouse Co., Portland, Me., had promised to address the members on "Competition in Trade," tended to make the attendance a liberal one.

During the dinner much interest was displayed in a souvenir portfolio of pictures of Hardwaremen, covering ninety pages, issued by the Wilcox Mfg. Co., and entitled, "Lest We Forget." Several members of the Association were represented therein, greatly to their enjoyment.

After participating in the dinner, the minutes being read and approved, President William D. Parlin, whose term of office had expired, addressed the members in the following valedictory:

In closing my official year, ending my relation with you as president, I wish to acknowledge the uniform courtesy and kindness shown me by every member of this Association. It is a pleasure, besides an honor, to preside over such a body of men. I recall no lack of assistance that I have asked for. Indeed, you have most generously come to my aid whenever requested. That our success has not been greater in all our plans has not been wholly your fault.

We made heroic attempts early in the year to bring about a better understanding among rival dealers throughout New England, whereby wicked, deadly competition should be eliminated or relaxed. The times were very favorable and our expectations large.

To a good extent we have succeeded. We know of a number of very successful local associations, and are given to understand that others exist, known to the local dealers only. Boston has resisted all our attempts in this direction. The very city we hoped to make a pattern for all others is still far from the mark we had set for her.

I hope the coming year will bring to pass a better understanding among her dealers. Would not it be wise, in the selection of officers for the coming year, to choose men who could bring about such a desirable arrangement?

We discussed many evenings whether the Association should be a social or a business organization. The trend of opinion was for business, with enough social features to make members acquainted with each other. Our ladies' evenings have been social successes, and I am sure a kinder fellowship among members could not exist. We have thus well taken the first step in our progress towards softening the hardships of competition.

Our secretary will give more in detail the Association business for the year. The treasurer will show how we have wisely or otherwise made use of the funds you have given into our keeping. Let us hope that the coming year will take us a long step towards complete understanding and friendly co-operation among all New England Hardware dealers.

The Association has come to stay. Let us work together to correct its faults and to build it up into a strong body, able to remedy all the ills caused by manufacturers, jobbers, department stores and our own competing neighbors.

The president's remarks were warmly received, and after the applause had subsided, the report of the nominating committee was called for. Mr. Samuel H. Thompson, the chairman, reported the following names for consideration: S. D. Balcom, first vice-president; M. A. Chandler, second vice-president; E. C. Bliss, third vice-president; James A. Farless, secretary; Henry M. Sanders, treasurer; H. G. Janvrin, D. F. Barber, J. B. Hunter, A. S. Morss, E. J. Neale, B. C. Pierce and W. E. Plummer, directors. The sense of the meeting was that the Secretary be instructed to cast one ballot, and the gentlemen named were duly elected.

The election of president by ballot was then proceeded with; and, after several ineffectual efforts to persuade President Parlin to serve another year, John W. Burditt, of Cambridge, was elected. After being welcomed to the chair by the retiring president, Mr. Burditt in brief and appropriate terms, thanked the Association for the honor they had conferred upon him, and promised to do all in his power to serve their interests during his term of office.

Mr. Chamberlain was then presented to the members, and we make the following extracts from his speech:

I trust you will be lenient in your criticisms of what I have to say, remembering as an excuse for my being here at all that I am greatly interested in all trade association work, and all that it means, because in it I think I can see a remedy for some of the evils that exist. * * *

I am interested in all associations, the association of manufacturers, the association of jobbers and the association of retailers. They are all good, and all have a work to do. Some of us have feared the large associations of manufacturers, under one management, might be detrimental to smaller interests, but as yet we have not found this the case. * * *

The scramble for business had reached the point of the survival of the fittest, which is destructive, not constructive, and in honest English means disaster to the weaker and with him those dependent on him. The manufacturer could not afford to pay his workmen honest wages, for he was obliged to compete with so many other manufacturers, he had to grind them down to the smallest pittance, on which they barely existed; they did not live, they bought the necessities only. Then many manufacturers had limited capital, and the moment their stock began to accumulate they were obliged to force sales by cutting prices below a living margin. Now we are apt to forget it, but even the largest manufacturer is only a man like other men, and is governed by very much the same motives and impressions. * * *

How many of the largest manufacturers of Hardware could foresee in 1898 what was coming in 1899? How many can see what will come in 1901? I assure you they are only mortals, with mortal limitations. * * *

Some business men take a wrong view of a declining market, and, thinking to reduce their stocks to the minimum quickly, begin by cutting prices unnecessarily. Now such a course only precipitates what they are trying to avoid. It might work if our neighbors could only be induced to take such a personal interest in our welfare as to allow us to sell all the goods for a short time, but, strange to say, they will not consent to this, and usually the result is they not only meet cut prices, but go us one better, until what might have been a gradual return to a lower level becomes a stampede. * * *

It has been a pet theory with me that one of the causes that has helped to make the past our banner year in exports of this line was the strike of the English engineers, or what we call machinists, for an eight-hour day in 1897. This was so protracted and fought with such determination on the part of the engineers that it seriously crippled the English manufacturers, and they could not take contracts with any certainty of filling them within a reasonable time limit, neither did they have any basis on which they could estimate the cost of labor. * * *

In the meantime those who had orders to place had come to this country to place them and there could be but one

result. The goods were so much superior, and the contracts filled so quickly, it established a trade for our manufacturers that England can never hope to divert to the old channels. * * *

Now, why is it you are all here to-night, some of you coming long distances and at quite an expense? Not for the dinner. No doubt your good wives could provide a much better one at home. You come that you may learn of some way to make your business more profitable; that you may increase your profits; that you may learn why you should sell a cask of nails costing \$4 for \$4.10, and yet you make as much on an article that only costs you 20 cents. Now, if associations are of any value they should help you to stop an evil like selling staples without profit. But you say this pays me 10 cents above cost—yes, but how about your expenses? Have you added those to the cost? * * *

To accomplish this you must educate the trade up to your level. You are the schoolmasters: you fit yourselves for the work in your associations by talking over these matters freely and getting the best judgment of all your associates. Have the courage to demand justice for yourselves; have the fairness to meet your competitor more than half way; be friendly with him. He cannot prosper without your being benefited indirectly. Don't get discouraged if at times the battle seems to go against you. Persevere, be patient, nothing can be gained by loss of self control. I am proud of being a Hardwareman. It is an honorable, manly business, calling out the best there is in a man, and it should be the aim of all to place our chosen calling on a higher level, and while there will always be competition, let it be honorable, above any petty meanness, worthy of Hardwaremen.

Mr. Chamberlain's address was listened to with the closest attention; and its close was followed by the heartiest applause. It was evident that his good advice had sunk deep in the hearts of his hearers.

Following this a general discussion by the members on the same subject, and on "The Advance in Prices and Its Effect on the Hardware Trade" took place.

Hiram G. Janvrin did not think that the present range of prices was too high, and predicted that they would last for four or five years, and probably become much higher. He recalled that he had known prices to be much higher on many articles than they are at the present time. He thought the present lull in the building trade was due to over-production, loss in speculation and higher prices. The practice of taking contracts at a practical loss in order that your competitor should not have the business he thought very bad policy.

D. Fletcher Barber asked that editors of Hardware papers bear in mind that the New England Hardware Dealers' Association was established March 15, 1893. Referring to Hardware prices, he thought that the advance in the past had been too rapid, and had caused the public to have a lack of confidence in their permanency, and that any advances in the future should be more even, and suggested that Hardwaremen should use their influence to have them so, as it would help to restore the public confidence.

George W. Burditt thought that the adding to the cost of goods the average cost of selling would be impracticable if made on staple articles, but the loss incurred on these could be made up by selling side lines.

The name of Geo. P. Cahoon, of the Taunton Wire Nail Co., Taunton, was reported upon favorably by the membership committee, and he was unanimously elected.

During the evening the celebrated baritone, Robert L. Van Buskirk, rendered a number of classical and popular selections, demonstrating not only his claims to superiority as a vocalist, but also his great versatility. He was accompanied by R. W. Blackmer.

"It seems to me," said a Vermont judge to his daughter, that your young man calls a good many times a week. My Court doesn't sit anywhere near as often as yours does." "Oh, well, papa," was the blushing reply, "I am engaged to him, you know, and that entitles us to a court of the special sessions.—*Burlington Free Press.*

SEWING MACHINES ^{AND} THE HARDWARE TRADE.*-VII

I believe the possibility of the successful handling of sewing machines as a profitable and pleasant side line for the Hardware dealer has already been well and ably pointed out, both from the standpoint of the manufacturer and the jobber, so that I do not feel I could add anything more of material interest to it.

However, let us now, for the sake of argument, consider that the Hardware dealer has placed a sample order so that he is immediately concerned in an intelligent understanding of sewing machines, and will welcome any information that will aid him in the successful sale of them. The sewing machine is an extremely interesting subject and interests the thoughtful housekeeper as a wonderful piece of mechanism. A whole library might be written about sewing machines. They have a history and a romance of their own, and about which a great deal has been written; there are also scientific and technical treatises which only an expert can comprehend; but which the writer will pass by and attempt to give a few practical facts about retailing sewing machines, which the dealer is most eager to learn and which are, perhaps, the most interesting of all.

The incomplete and often untrustworthy explanation given in sewing-machine catalogues furnish very little real information for the dealers' benefit. They are generally written by persons who either lack expert knowledge of sewing machines, or only aim to make an argument in favor of some particular sewing machine; consequently they are always unsatisfactory and misleading.

In taking hold of the sewing machine business the dealers' main object, as in everything else, is to make money. To do this successfully, it is first necessary to start right and then push steadily onward. Feel your way gradually and endeavor to make yourself as familiar as possible with the other machines handled in your territory. After some little time you should be able to point out the weak spots in the machine handled by your competitor and impress the customer with the advantages of your own. In a large city the dealer can bring customers by his advertising. In the smaller towns it depends more largely on his personal standing and recognition as a citizen. Surmising that the dealer has got fairly started and has received the agency for a good and popular machine, we now come to the important point, that of pushing the business and making sales. The most popular, but not at all times the most satisfactory method, that has yet been devised is known as the "trial system". By this method machines are placed in the homes of prospective customers, on trial, in the hope that they will be so pleased with the machine as to become attached to and buy it. Usually two or three days is sufficient to learn the intention of your prospective customer, unless you know the parties personally, in which case a longer time to suit the case can be given. However, I believe eventually the dealer will find short trials the most satisfactory and profitable.

Having brought before your customer the main points of your machine, you can fill in the interval by talking guarantee, price, and the proverbial cheap machine.

A cheap sewing machine is cheap because it is made of inferior or defective materials, costing less than good materials; the steel is untempered, and the construction is hurried and unsubstantial. It is easy to say of any sewing machine that it is made of the "best" material and in the "best" way; but when the question arises of what is the precise grade of each material used, and what is the exact

method and form of construction followed in every process if the truth be told, it will be found that at nearly every stage in the manufacture of a cheap sewing machine some doubtful or inferior material is used, or some makeshift expedient adopted.

Some of the following defects are sure to develop in a cheaply-made sewing machine after a few years' use: The sewing machine will not stitch properly, the feed refuses to work, it breaks thread constantly and will either not run at all, or it will make a rattling noise. A cheaply-made sewing machine cannot last more than two or three years at the longest, and will not give satisfaction even during that short length of time. It, therefore, is not economy to buy a cheap sewing machine even though a large percentage of its cost may be saved by so doing, for in the end it costs *more*. The "Blank" is a better purchase than any cheaper sewing machine because it will last a lifetime, and will give perfect satisfaction while it does last.

There are sewing machines which cost more, and many which cost less than the "Blank". As every purchaser naturally desires to get the very best sewing machine at the lowest possible price, it is a serious question whether to purchase the "Blank" or a sewing machine which costs more or one which costs less. One who desires the very best that can be obtained would not object to paying more for another sewing machine if it was superior to the "Blank" sewing machine; but, on the other hand, no one is so regardless of money as to buy even that sewing machine if one of equal quality could be purchased for less.

The price of the "Blank" sewing machine pays for the best material and the best workmanship. Every dollar that ought to be spent on it to make it a perfect sewing machine is spent. But there is not one item of unnecessary expense. Our long experience enables us to manage the materials and labor in the most scientific and effective way, so that there is no waste of either. Our effort is to secure the very best results as economically as possible, so as to offer a perfect sewing machine at the lowest limit of cost.

The extravagant prices charged for certain sewing machines have nothing to do with their quality or the cost of making them. Unnecessary expenditures are added to the price without improving the quality in the slightest regard.

Besides this, many people are willing to pay an extra price as a premium for the sake of a fashionable name; but there are fewer of these people than formerly. At the present time the great majority of thoughtful people who purchase a sewing machine care more for its actual merits than for its name. They are perfectly willing to pay for quality, but for quality only.

The construction of the "Blank" is such—only the very best materials being used, and these being put together in the most careful and substantial manner—that with ordinary care it will last and do good sewing for a lifetime. Every "Blank" sewing machine is guaranteed for ten years against any defect in workmanship or material. This means that, if not abused, it will remain in good order and condition for ten years. If the term of guarantee meant simply the length of time a sewing machine would last, we could guarantee the "Blank" for twenty-five years. What is meant is, the length of time a sewing machine will remain in good order and condition, and give satisfaction without requiring any repairs beyond the ordinary yearly cleaning.

* In this series of articles on Sewing Machines, all rights are reserved.

The great trouble with the Hardware dealer handling sewing machines is the mistaken idea that all that is necessary for him to do is to have the machines standing on his floor and that they will sell themselves. Such dealers expect large returns without any extra effort. It is small wonder that they look upon their sewing machine investment as a failure. The merchant or Hardware dealer who takes hold of the sewing machine business with the understanding that it is simply a good business opportunity which he must improve and make profitable by the legitimate methods that would bring success in any branch, will not make a failure of this line, but find it more profitable than any other side line he can engage in.

Rockford, Ill

G. H. DIRHOLD.

The New York State Hardware Association.

The New York State Association of Hardware dealers held a business session and banquet in Binghamton on February 9. The business session began at 9:30 in Assembly Hall and lasted until 2:30. The session was entirely executive and none of the proceedings were given out for publication as to the business that was transacted. It is stated that matters relative to the Hardware business of the State alone were discussed, it being the association's bi-monthly meeting. Syracuse was selected as the next place of meeting, and the date April 22d, at which time the Association will be entertained by the Burhans & Black Co. and the Syracuse Hardware & Iron Co.

During their stay in Binghamton the dealers were entertained by the Babcock Hardware Co. The banquet was served in the late afternoon, and an elaborate menu was discussed, many informal speeches being made by the delegates and guests of the occasion.

Illinois Retail Hardware Dealers' Association.

The meeting of the Illinois Retail Hardware Dealers' Association is to be held at Peoria on February 27th and 28th and March 1st. It was expected to accomplish the labors in a two days' session, but owing to the failure to secure a hall for night session, which it was contemplated would be held on the evening of February 27th, and, having too large an amount of work before the convention to be accomplished in two days, they were obliged to extend their meeting another day. There are a large number of important questions to be considered, some of which require more or less previous investigation. The executive committee decided it advisable to name a special committee for this purpose, and also give them ample time to bring several subjects before the convention in tangible form, among which may be mentioned: "Lien Law," "Bankrupt Law," "Peddlers' License Law," "Parcels Post Law," "Catalogue Houses and Department Stores;" and the work also includes plans of operation for the ensuing year. The committee having these questions under consideration consists of Dan. Holder, of Bloomington; G. R. Lott, Chicago; S. A. Crissey, Marengo; Jacob Ballet, Edinburgh; D. McLaughlin, Chicago; William Bittel, Peoria; H. C. McCormick, Centralia. A great deal of interest is manifested by the trade in the coming meeting, and every effort is being made to make it of such importance to the dealer that he may consider it will return his expenses manifold by the end of the year. The Peoria dealers and manufacturers, as well as jobbers, are endeavoring to arrange an entertainment to form one of the pleasing memories of a lifetime, and they are enthusiastic in the matter, and believe that they will send the visiting members home recuperated in mind and body, as well as enthused with the forces existing in the bonds of fellowship. We are indebted to the secretary of the Association, L. M. Reeves, for the following programme of work laid out to occupy the three days' session:

PROGRAMME.

TUESDAY, FEBRUARY 27, 1900.

10:30 A. M. Meeting of the Executive Committee at Fey Hotel.

1:30 P. M. Roll call.

Address of welcome by Mayor Lynch.

Response, Vice-President McLaughlin.

Enrollment of new members.

President's annual address.

Secretary's report.

Treasurer's report.

Reports of committees.

Appointment of committees on press, nominations, auditing and resolutions.

Payment of annual dues.

Adjournment.

WEDNESDAY, FEBRUARY 28, 1900.

9 A. M. Paper: Do Mercantile Interests Demand a Change in Our Monetary System? F. E. Bommey, Paxton.

Ten minute talks: Jobbers and Manufacturers as Competitors with Retail Dealers.

General discussion on revision of Constitution and By-Laws, and the appointment of committee on revision.

Paper: Do Present Trade Conditions Demand a Revision of Import Duties?

General discussion.

Adjournment.

1:30 P. M. "For members only."

Papers: Local Organization and Its Benefits. W. J. Krueger, Chicago; Wm. Bittel, Peoria.

Paper: Co-operative Buying. Geo. A. Engelhardt, Chicago.

Paper: Trusts, Combines, Catalogue Houses and Department Stores; or, Signs of the Times Regarding Retail Interests. President Z. T. Miller, Bloomington.

General discussion.

Adjournment.

Evening: Banquet to visiting dealers.

THURSDAY, MARCH 1, 1900.

9 A. M. Memorial address. W. B. Costello, Chicago.

Election of officers.

Selection of place of 1901 meeting.

Report of auditing committee.

Report of committee on plan of operation for the ensuing year.

Unfinished business.

Adjournment.

2 P. M. Visiting jobbing houses and points of interest.

Wisconsin Retail Hardware Association.

The fourth annual convention of the Wisconsin Retail Hardware Association, which was held at Milwaukee, February 7th and 8th, was in session at the time of our going to press with our previous issue. It was the most important convention the Association had ever held, great interest being manifested by all of the dealers who participated, and important advantages will be the result. The sessions of the convention were held in Lipp's Hall, which had for two previous annual meetings been found large enough for the purpose. From vice president A. H. Sheldon's address, which followed the president's response to the address of welcome of Mayor Rose of Milwaukee, we make the following extracts:

Our object, as I before said, was the betterment of our condition as Hardware dealers, and this was to be accomplished in many ways. I was anxious for enlightenment on various subjects and wanted to hear the experiences of those who had long been at the helm and were known to be successful Hardwaremen. Then we had this knotty problem of department store business to deal with, and more than all to get concerted action among all the dealers in the State in any work of reformation we might undertake, and this could not be accomplished unless we thor-

oughly knew each other and worked together. We will admit that we have not yet bagged the game, but this every one knows full well: We are after them and will not rest until we get some relief.

* * *

Supply and demand are to my mind the only healthy regulators of trade, and should always continue to be, and when the individuality of mankind is taken away and concentrated in a few, then do we begin to degenerate as business men. I believe the present time is a critical one for retail dealers, and they should carefully know "where they are at," and purchase goods only as they need them, for present prices must curtail trade, and when surplus goods commence to accumulate no one will desire to carry them, and it will be wise to be prepared for any decline that may occur.

Of course it may be that the immense demand for our products abroad will keep up as during the past season; if so, we may not see much decline for some time, but excessive prices will tend to diminish that. We all sincerely hope that the time may soon come when prices will be settled, at least so that we can intelligently know what course to pursue.

* * *

Vice-president Sheldon was followed by ex-president John Hughes, of Fond du Lac, who, in the course of his remarks, spoke as follows:

One of the best things we have accomplished is making friends with each other. I know that in our town we have accomplished a great deal in that respect, and I know of several surrounding towns where our influence for good has been felt. As to our hopes of accomplishing something in a larger sphere in the United States, I am glad to know that many institutions of this kind have sprung up in other States.

* * *

There are many questions that a national retail Hardware association can make itself useful in. We should try and elect to such an association the right sort of men. I don't think they should be numerous, one delegate from each State association is quite sufficient and one delegate from all cities of over a certain number of inhabitants. I would have those men young and vigorous and progressive, knowing our rights, and, as some one has said, "daring to maintain them." I would have men that would think more of business than of banquets. I would have men that would think more of furthering the affairs of the order or demands of the Association than of oratory. In my opinion there is nothing that detracts from business more than oratory.

* * *

The president then appointed the following committees: Committee on Transportation: Ralph Burtis, of Oshkosh, and F. C. Burr, of Milwaukee. Committee on Resolutions: R. Murdoch, of Broadhead; A. G. Cox, of Augusta, and A. D. Race, of Depere. Committee on Grievances: John Hughes, of Fond du Lac; John Hessel, of Antigo, and L. B. Ruka, of Boscobel. Reception Committee: Andrew Noll, of Chilton; Mr. Hay, of Oshkosh, and M. F. Howells, of Sparta. Sergeant-at-Arms, F. J. Wilkie, of Fond du Lac.

This was followed by the secretary's report, extracts from which we gave in our previous issue. The treasurer's report followed, showing a balance remaining in his hands of \$445.93.

Henry M. Gay, of Milwaukee, was requested to relate from his varied experiences as a commercial traveler some of his most interesting adventures, which he did to the great enjoyment of those present, his experiences being of long duration, having been on the road thirty-three years as a commercial traveler. The secretary read the following invitation to entertainment.

To the Members of the Wisconsin Retail Hardware Association:

The Hardware manufacturers and jobbers of Milwaukee extend to you cordial greetings and trust that your sessions will be profitable and enjoyable. The date of your convention forbids our showing you the beauties of Milwaukee, or entertaining you as we should like. Herewith inclosed find tickets for the Davidson Theater for Wednesday and the Alhambra for Thursday evening. Please accept them

with our best wishes. We should be pleased to receive a visit from you at our places of business.

NATIONAL ENAMELING & STAMPING CO.

MILWAUKEE, February 7, 1900.

The reading of the communication called forth decided expressions of approval, and a formal vote of thanks was tendered by the convention. The convention then adjourned until the next morning.

At the Thursday morning session, the Association was called to order by President Montgomery at 9:30. The calling of the roll was on motion dispensed with, the members being expected to register their names on the book of the Association, which was done. The president appointed a committee to report on more suitable accommodations for the next annual meeting, as the convention had undoubtedly outgrown those in use at this time. The secretary received a telegram from Evansville, Ind., which was as follows:

To the President and Secretary of the Wisconsin Retail Hardware Association:

Our Indiana Retail Hardware Dealers' Association in convention to-day, extend to your Association congratulations and compliments.

W. H. WEED, president.
W. W. ROBB, secretary.

It was moved and carried that the telegram be spread upon the minutes, and a like reply be sent to the Indiana Retail Hardware Dealers' Association. The secretary stated that he had prepared a reply as follows:

To the Secretary of the Indiana Retail Hardware Dealers' Association:

Congratulations and wishes, with the same degree of prosperity and success that we enjoy.

Election of officers followed, and the convention proceeded to elect officers for the ensuing year. President Montgomery having declined to serve another year, vice-president A. H. Sheldon, of Janesville, was nominated for president and elected unanimously. Upon being escorted to the chair and installed, he made a brief speech of thanks accepting the honor with gratification. John Hessel, of Antigo, was nominated for vice-president to fill the vacancy, and unanimously elected. A motion was passed making the secretary's salary \$300 for the coming year, after which C. A. Peck, of Berlin, was nominated for secretary, and unanimously elected.

Treasurer Schlegelmilch having declined to serve for another year, B. B. Scofield, of Sturgeon Bay, and H. J. Steinbach, of Rice Lake, were nominated. Mr. Steinbach received a majority of the votes cast, and was declared elected.

The executive committee having decided to recommend to the Association the wisdom of having two members of the executive committee hold over, instead of electing an entirely new set of officers, Arthur Heins and O. P. Schlafer were nominated for re-election, and the choice was unanimously agreed to. For the other two members of the executive committee D. S. Kusel, of Watertown, and Henry Droegkamp, of Milwaukee, were elected. This was accompanied by a motion giving a vote of thanks to the officers for the faithful performance of their many duties during the past year. The subject of fire insurance then followed, in which many of the members discussed the various forms of co-operative insurance, some of which had already been adopted in other States, and after considerable discussion, no decision was reached as to favorable action.

It was decided on motion that the next annual meeting of the Association be held in Milwaukee, at the time set forth in the constitution. The committee on arranging for headquarters in the future reported, but after some discussion the matter was left to the discretion of the executive committee, who could make the necessary arrangements some time in the future.

The secretary then read two letters from president Miller, of the Illinois Retail Hardware Association, in reference to organizing a national association, which resulted in a motion being made and adopted that the president and secretary attend the meeting to be held for that purpose.

H. F. Schlegelmilch, of Eau Claire, then read a paper upon the subject: "How to Increase your Business," from which we make the following extracts:

To increase your business you must sell more goods. How many merchants are contented to drift along, taking only the business that comes to them, without making an effort to increase their trade? The merchant who would increase his business should everlastingly study the needs of the public, keeping himself well informed in regard to all the new and practical articles being introduced in the market; also keeping in view any novelties which will prove good sellers while they are new to the trade.

* * * *

Don't let a customer leave your store with unsupplied wants—if you can help it. To be able to supply almost everything in demand will materially assist in increasing your business. It is possible to do this without filling your store with dead stock and you cannot sell goods unless you have them. You can close out unsalable goods by special sales in a way that may be advantageous. Keep your store attractive, so that your customers will want to come again. People are not afraid to enter a nice looking store, provided the right kind of a man is in it.

* * * *

Push and advertise good goods; quality is remembered long after price is forgotten and people are proud possessors of things worth having. Selling good goods gives a man a good business reputation and helps to establish a high class trade.

* * * *

To prevent the possibility of getting a reputation for high prices, keep a well assorted stock of "cheap goods" in the background and sell them cheaper than the cheapest when necessary, relying on the better grades for a reasonable profit. A merchant should always first offer the best of any article called for, and should that prove too expensive then show the next best, and so on down until he reaches the level of the customer's purse.

* * * *

Another very important assistant in increasing your business is good advertising. Your local papers are perhaps, the best medium through which to reach the trade. Engage a good space and change your advertisements regularly. I shall not attempt to tell you how to advertise, as the trade papers are filled with good suggestions regarding it. I know it pays, and the better the advertising the better it pays.

This paper was followed by another, read by R. H. Suettinger, of Two Rivers, the subject of which was "How I Do a Cash Business." It was a very instructive paper, founded on his personal experience, and the unique methods he had found it necessary to adopt in order to achieve the success with which he was credited.

The Question Box was then opened, and from its varied contents a selection was made by the committee appointed by the president for that purpose. The discussion was participated in by many of the members up to the time of taking a recess, which continued until 2 P. M. The afternoon session, the president said, would be opened by a reception and remarks from the representative jobbers and manufacturers who were present, which was participated in by William Lindsay, of Lindsay Bros., Milwaukee; C. G. Dennison, of C. Sidney Shepard & Co., Chicago; J. W. Schatt, of the New York Cutlery Co., Gowanda, N. Y.; J. B. Champlin, of the Cattaraugus Cutlery Co., Little Valley; and John C. Koch, of the John Pritzlaff Hardware Co., of Milwaukee, whose participation in the addresses was loudly

called for. H. L. McNamara, of Janesville, then read a paper on "The Relation of Traveling Men to the Retailer."

Otto P. Schlafer, of Appleton, followed by the reading of a paper on "The Retail Dealer Competing with the Jobber," which was listened to attentively by the assembled members. A desultory discussion followed in regard to the relation of the Association to the jobbers, in which some of the grounds of contention were gone over, and favorable action agreed upon.

The committee on resolutions then presented the following several resolutions prepared by them, in which the usual and customary votes of thanks were given to those who had materially assisted in making the meeting an unqualified success. The resolutions included the following:

Resolved, That we earnestly protest against any advance in freight as unfair and uncalled for and that the officers of this Association are hereby authorized to take this matter up as soon as possible with the proper parties, opposing it to the bitter end.

Resolved, That we oppose the enactment of any post law that would assist all department companies, and greatly retard and curtail the legitimate Hardware trade.

Resolved, That our next annual meeting be a three-day session, and in view of our growth that we request the executive committee to procure a larger hall than we now have for our meeting.

A number of smaller matters of interest to the trade were discussed and passed upon with a view to future benefit, after which the convention adjourned sine die.

Indiana Retail Hardware Association.

In our last issue we gave a portion of the details connected with the third semi-annual meeting of the Indiana Retail Hardware Association, held at Evansville, February 7th and 8th. We are now able to give some portion of the address of Irving A. Sibley, who spoke on behalf of the new members from Northern Indiana, as the Association had decided to drop the word Southern from their title and cover the entire State.

In behalf of the new members from Northern Indiana, I think that I can say that it is a sincere pleasure to every one of us to find ourselves associated with gentlemen who were formerly members of this association in as earnest and good a cause as we have met for. I feel that by getting together, with Hardwaremen generally, whether we are able to accomplish all the results for which we meet or not, we cannot fail to accomplish much that will be of great benefit to us.

* * * *

I hope that every retail Hardware dealer in every State will become a member of this association, and that our association will elect delegates and send them to the national association; and I tell you, gentlemen, that there is no measurement of the amount of good that can be done by co-operation in an honorable way. I do not believe in being small and in asking for concessions that are not businesslike; still I presume there is not a man in this room who does not think that he is entitled to an honest profit.

* * * *

After recess, the secretary, W. W. Robb, made a few remarks in which he expressed a desire to apologize to such dealers throughout the State that had failed to get the circulars which he had mailed, and he hoped he would be placed in possession of the names of all the dealers in the State, for he had been unable to get a perfect list on which to act during the past year. He explained the method of using the Question Box in regard to bringing up subjects to discuss, and invited all the visiting members to take part in the debates that might naturally occur on various portions of his report before it was fully adopted. Mr. Kinderman, of Boonville, then moved that that part of the secretary's report pertaining to resolutions be referred to a special committee, and the balance be adopted as read. This point being placed to vote was carried, and the president named as this committee, Messrs. Sibley, Lewis and Burkett.

The treasurer's report after being read was referred

to the auditing committee, which consisted of Messrs. Boonshot and Dupendach.

The secretary suggested that a committee be appointed to look over the constitution and by-laws of the Illinois, the Chicago, and the Louisville Associations, to ascertain if any improvements or changes could be made that would be of advantage to the Association in the formation of a constitution and by-laws under which the Indiana Retail Hardware Association would be governed in the future. A motion was adopted, and a committee appointed, consisting of Joseph W. Knapp, Louisville, Ky.; J. M. Scantlin, Princeton, Ill.; and C. P. Frame, of North Manchester, Ind.

The committee on the secretary's report reported as follows:

We, the committee duly appointed, recommend that the report of the secretary be adopted with the following amendment:

The president of this association and two delegates properly elected shall constitute a committee to attend a meeting looking to the organization of a national association of Hardware dealers, all expenses of such committee to be paid from the treasury of this association, and, if necessary, the secretary be instructed to make an assessment to defray such expenses.

The committee further suggests that on the election of these delegates notice of same be wired to any State Hardware Association now in session, together with appropriate greetings from this body, and that a copy of the same be sent to all State Hardware Associations and that they be requested to take similar action.

This report was adopted as read.

M. L. Corey, Argos, addressed the convention, and among other things said:

The objects of our association are to encourage stability of good business conditions, secure a better feeling and more extended acquaintance between dealers. To study the signs of the times, and approve that which leads to genuine advancement, general prosperity, and the peace and happiness of our people.

We should be unselfish, progressive and up-to-date, meeting the various questions that influence our attendance at this meeting in a spirit of fairness; decide upon our policy intelligently, with a firm determination to abide by the edicts and principles of our association. We are not here to advance prices, form a trust, restrict legitimate competition, retard genuine progress, nor predict disaster for the future. Neither are we of those who drift along realizing the growth of certain evils, continually reciting their tale of woe to their customers and friends, but afraid to utter a protest publicly or join an association even for fear some one might use this fact against them.

* * * *

Remember this, to accomplish our aims we must concentrate our fire and all aim at the same target. Unite all the various State associations to accomplish some needed and just reform, and we are pretty sure to succeed. On the other hand, if we make a mistake it will not only reduce our influence, but have a tendency to keep many dealers out of our organization that we hope to have with us before another meeting. I think the sentiment in favor of our association is almost universal. Many do not realize, however, the importance of becoming members, and some steps should be taken to bring this matter before them personally and secure their influence. I know that many who intended coming to this meeting were kept at home by distance, business engagements and other causes.

* * * *

Let us not forget those stanch, influential friends, our trade papers. They are doing more to consolidate and benefit the Hardware trade than we realize. We can never accomplish anything without their help, and this they are giving us to the fullest extent, and most of the interest taken in our various State associations should be credited to them. Let us encourage them by our patronage and occasionally contribute items from our several localities.

At the conclusion of his remarks, the committee on constitution and by-laws reported as follows:

We find that the constitution adopted by the Retail Hardware Association of Indiana covers the ground fully. We do not see any need of making any changes in it whatever. We have read the various constitutions carefully,

and we find that your constitution is fully sufficient for the present requirements.

The motion was then adopted that the constitution and by-laws remain as they are. A discussion followed regarding the relations of Hardware dealers to department stores, in which a number of letters were read by the secretary from wholesale houses having reference to the subject. The convention then adjourned until Thursday morning.

THURSDAY MORNING SESSION.

Secretary Robb, presiding in the absence of President Weed, the contents of the Question Box were first disposed of. On each of the questions emanating therefrom, fifteen minutes discussion was allowed. Among the questions debated were the following:

What is a legitimate profit on Hardware and tools?

Can you do an entirely cash business without a loss of trade?

How about warranting goods?

Do you make a special effort to increase trade during the holiday season? If so, what method do you employ?

Is it practicable to do a strictly one-price business in stoves, Hardware and vehicles?

Should goods be marked in figures or in characters? This particular question, upon a motion being put, was carried by a considerable majority to mark the goods in plain figures.

J. M. Scantlin, of Princeton, then addressed the convention on "Our Duty to our Association; to our competitor; to the 'Knight of the Grip' (Is he friend or enemy?)" It was an extremely interesting paper, enjoyed thoroughly by the members present, being undoubtedly a revelation of his own experience.

The auditing committee then read their report, which on motion was accepted, and placed on file.

The election of officers for the ensuing year which followed, resulted in the unanimous re-election of the former officials. On motion, a vote of thanks was tendered them for their efficient services. Mr. Sibley moved that a committee of eighteen, to be called a Committee-at-Large, be appointed, whose duties should be the formation and carrying into effect of some plan to secure new members. This motion was unanimously carried. A circular of "An Appeal to the Retail Hardware Merchants of Indiana" was read, and approved, having appended to it the names of the Committee-at-Large, of which M. L. Corey was subsequently elected chairman. This refers to the various objects to be attained by the Association, and the manifest advantages that every retail Hardware merchant in the State would derive from becoming members of this organization, not only for the purpose of mutual protection, but from the fact that it is also vital to their future welfare.

THURSDAY AFTERNOON SESSION

was opened by the reading of a letter from Z. T. Miller, president of the Illinois Retail Hardware Dealers' Association, suggesting that a meeting be held in Chicago on March 12, 1900, for the purpose of taking steps that would result in the formation of a national association of retail Hardware dealers, at which meeting the organizing of such an association could be fully discussed. Irving A. Sibley, of South Bend, and E. M. Bush, of Evansville, were elected, with M. L. Corey, of Argos, and C. F. Boonshot, of Petersburg, as alternates, to attend this Chicago meeting. It was then agreed that the next semi-annual meeting be held in accordance with the constitution of the Association which would cause it to convene at Indianapolis on August 1, after which the convention adjourned.

Iowa Retail Hardware Association.

The second annual convention of the Iowa Retail Hardware Association was held at the Savery House, Des Moines, on February 14th and 15th. In consequence of

the efforts put forth by the officers for this year, a large increase in attendance at the convention was noticeable. Considerable missionary work had been accomplished during the year by the enterprising secretary, Mrs. Henrietta E. Kupper, of Burlington, she having but recently returned from a tour of the State, which resulted in securing a large accession of members. The forenoon of Wednesday, the 14th, was spent in formulating a number of important matters which it was essential to get in shape previous to the opening of the convention.

The opening session was organized at 2 P. M. with the calling of the roll, followed by the election of new members. President H. A. Cole, of Council Bluffs, then delivered his annual address, from which we make the following extracts:

In reviewing what we have been able to accomplish in the one short year of our permanent organization, and the possibilities for the great future that is all as yet before us, the first thing that impresses me is that every retail Hardware dealer in the State should join our association. He should do it, if for nothing else, for the unselfish good of our profession, even though he knew at the time that he would not be able to attend a single convention.

The highest aim of our association is to so elevate the feeling between competing Hardware merchants that bitterness, acrimony, hatred and jealousy will be the exceptions in our calling, and if we stopped at this one fact accomplished, I, for one, would feel that we had justified every effort and every dollar that it has cost us. Even this, seemingly the least practical side of our work, has its financial side. If you point me to a Hardware dealer who has let this spirit of animosity get the uppermost hand and who systematically does his best to undermine his competitor, I will show you where he makes ten enemies of his own where he makes one for his competitor. In putting this better side of our Hardware life forward we elevate our profession and make our lives as Hardwaremen stand for something more than a daily grind for bread and butter. Friendly, manly competition, that while it uses all honorable means to advance one's own interests yet recognizes the competitor as having a right to respect and manly, honorable treatment, is what our association stands for.

We want your influence to secure needed legislation. At the present time we are co-operating with the State Grocers' Association to have enacted a new garnishment law that will be worth many thousands of dollars to the merchants of Iowa. There is hardly a merchant here who has not got accounts against parties whose income is hundreds or thousands a month, and still you can't collect. We want a law that will make everything above \$8 per week subject to garnishment.

Let us give cash trade the benefit it is entitled to in price against time customers, systematize this feature and carry it out. Let us learn that the public do read advertising and spend money wisely and systematically along this line. Where the public want and can use good serviceable articles in seconds that really have merit, though imperfect, let us keep them and sell them as such, and at low prices. And then where possible, enlarge and improve our plans of displaying goods.

Let us push lines that are profitable, and tie up as little money and effort as possible on unprofitable lines. On lines that department stores let severely alone, like Wire and Nails, because Hardwaremen sell them on so low a margin, let us try and bring these up to a point where they will yield at least a narrow margin of profit, and in doing this remember that your cost of doing business, figuring yourself reasonable rent and salary, is a legitimate part of the cost of every article that comes in your store and must be figured as such.

Another thing I want to urge on our membership, and that is, system in using and reading our trade journals. A few minutes systematically given every day to their study and quietly absorbing their suggestions will be of the greatest value to the retail dealer. Every dealer should take at least two of these journals. They are the best friends we have, and we can help ourselves in no way more than by taking them and studying them.

The question of grievances is really the biggest proposition we have to solve, and it is by far the most delicate

one, and far reaching in its influence. If we are unwise and unreasonable in our claims, and in our way of presenting them, we will show far less results and do ourselves more permanent harm than if this work is in the hands of a safe committee man. Courtesy and diplomacy and everlasting stick-to-itiveness is what we want on the part of our grievance committee. These qualities will win co-operation, while an attitude of always being ready for a red hot fight and not give the other fellow a show to mend his ways, is very apt to get the fight without getting the wrong righted. Don't understand above as in the light of trying to excuse the little tangible blood we have drawn, but I assure you, all things considered, your grievance committee has done well this first year of our existence.

The minute we say to any manufacturer or jobber, "You must choose between the trade of the retail dealer and that of catalogue house and department store," we have won our battle, and will find very little to fight about. We can't say this until we have a national association.

His address was a long and interesting one, and covered fully the amount of labor which he had been able to do for the benefit of the Association during the year. We regret that we are unable to give it in full.

The secretary, Mrs. Henrietta E. Kupper, then read her report, from which we make the following extracts:

I submit my report of the work done in the past year and so chronicle the progress of the Association. While my time is limited, owing to my lateness in returning home from my trip through the State soliciting new members, I shall be obliged to go somewhat into detail.

The first work done was to finish up the business of our first annual meeting, and the sending out of membership cards, urging all to assist in obtaining new members. In the month following, I made a tour of part of the State, visiting every dealer in fifteen cities, and explaining to them the objects of our Association and the importance of their becoming members, and secured in all thirty-seven persons. In July I sent out another circular letter to all the members of our Association, and also letters of invitation to Executive Meeting, called by our president, which was held in Des Moines, August 28, 1899.

On the 16th of January, I made another tour of the State, soliciting new members, principally covering county seats. The most populous part of the State having been visited last year, the work was not as readily accomplished, the towns being further apart and containing a less number of dealers. The work took up all the time from January 16th to February the 5th. My time on the road was twenty-one days—through rain and snow and blizzard, by team and cars, and I obtained fifty-seven new members. This work alone necessitated nearly two thousand miles of traveling; total expense of same, \$99.96, total collections, \$171.00, leaving \$71.04, net, above all expenses.

My experience has been a varied one and I know would fill a book. Some of the reasons given why dealers will not join our Association will convince you that we can never expect to line all of them into our ranks. One says, "I won't join a 'Trust,'" Another says, "I won't join an Association and I will buy my goods wherever I can buy them the cheapest." And another, "I won't join until the jobbers agree to sell to the members of the Association only;" but I will not hesitate to say that these very same parties are awaiting to receive any benefits we may be able to bestow upon them. I believe appeals by mail result in but little less than cost of postage. Personal solicitation must be made, and now. An Association of this kind cannot stand still—it must be active and effective or it must die; and I want to say to those present, if you prefer the former, take hold and push the work;—if the latter, stop now and save the time and \$3.00 a year.

By way of explanation without going into detail, I have extended a hearty vote of thanks in behalf of the members and officers of our Association to James J. Mandlebaum, president of the Southern Jobbers' Association, for a register presented to us to be used at our annual and special meetings. To the traveling men, we owe a vote of thanks; I feel certain a few of them have given their earnest attention to our Association. To the trade papers, we owe a debt of gratitude, as our success is largely due to the inter-

est they have taken in our Association and the many courtesies shown us.

In conclusion I will say, I believe we have nearly doubled our membership within the past year, and will also mention the fact that I have made no attempt to elaborate my report here mentioned, leaving this for those who are present to determine the work I have done. To the president who has devoted so much of his time to the task imposed upon him, and who has ever been ready to direct me in the discharge of my duties, I extend my sincere thanks. From the other officers and members I have received many words of encouragement and courteous treatment. I fully appreciate their kindness, but I wish to say to you one and all, that what I have previously said to you of this movement, I believe to be true,—that success will depend greatly upon the work and loyalty on the part of the members. Rally to the support of your new officers; give them every assistance possible, and wishing the Association the greatest success in the future, I thank you one and all, and respectfully submit my report to you.

Among the papers presented to the convention was one on "What Plan Can We Adopt to Persuade Dealers to Patronize Such Jobbers Only as are Friendly to the Association?" This was read by E. H. Norris, of Cedar Rapids, and was upon a subject that every member of the convention was interested in, and was treated by the author in a manner that commanded attention from all present. Another paper on the same subject was prepared by C. W. Brelsford, of Villisca. His method of treating the subject is indicated by the few extracts we make from his paper:

There are at the present time a large number of jobbers who are trying to act in accordance with the wishes of our State association by refusing to sell racket, department stores, etc., and confining the trade to its natural and legitimate channels. Those jobbers are our friends and should be assured of the hearty co-operation and support of every member of this association, but those who pass us by in our infancy must eventually cease their method of doing business or lose the better part of their trade. "A word to the wise is sufficient."

The success of this association is largely dependent upon the interest manifested and assistance rendered by each individual member. Therefore I would suggest that each member consider himself a committee of one to notice any or all shipments of Hardware coming into his place billed to racket or department stores or to any dealer of this description, make note of shipper's name, date of arrival of goods, etc., and report same to our secretary, who should take the matter up immediately with said jobbing house and obtain a full report, if possible, from them, place same on file, and, when another report of same character comes in regard to same house, call their attention to this as well as former complaints and let this serve as a caution to them in regard to such sales. The jobbers would soon realize we were awake and watching them, and I think it would take but a very few suggestive hints before they would do considerable thinking along this line.

We should enroll every traveling Hardware salesman in the State as a member. He should then familiarize himself with the objects of our association, and I think could and would do the association a great amount of good with his house. A large percentage of the selling to outside houses is due to the traveling salesman, who sells to these dealers without realizing what an injury he is doing the legitimate trade. I believe were they well acquainted with our aims this would be considerably reduced.

An interesting paper on "Window Advertising," by C. M. Doxsee, of Algona, was read, and as this is a matter of contemporaneous interest, many present were pleased to notice in what an interesting manner the subject was handled.

"My Methods of Advertising" formed the subject of a paper prepared by E. A. Rea, of Corydon. Among the many good things to which he called attention we cite the following:

Ben Butler once said he would rather people would talk mean about him than say nothing about him, and sometimes I think the business man who goes along quietly in the even tenor of his way and says nothing himself and has

no one else saying anything about him would better have somebody talking mean about him than saying nothing.

I have a list of all the farmers in my county, and some names in adjoining counties, not only including the land owners but the better class of renters also, and I mail to them, at least three times a year, a personal letter calling their particular attention to certain lines of seasonable goods, both in the Hardware and implement lines, and if I have any special bargains to offer I mention them and quote prices on them.

In addition to this I have, for several years, sent out calendars the first of the year to my farmer customers, being careful to send nice ones that will keep during the year. I advertise quite largely, both by display advertisements and locals, in both the newspapers published in our town, and at some seasons of the year in other papers published in other towns in the county.

If you know that you own a certain line of goods at a lower price than your competitors are paying for them, explain this to your customer and take all the credit for looking after his interest that you can, and, if you are advertising that you are making special prices or offering special bargains in any line of goods, be very sure that your prices are special and that the bargains you are offering are really better than your customer can get at other stores in your neighborhood.

Satisfy yourself who makes that best thing in each line you handle, from a pocket knife up to a threshing machine, then go to work for that line and continue to handle it from year to year, as long as you are satisfied that it remains at the head. Ask a fair legitimate profit, and no more, on these lines, and then maintain your prices without regard to what competitors ask for similar goods.

Meet competitors' prices and beat them on some other lines bought for that purpose, even if you lose money on these other lines. Keep posted on what your competitors are selling, and if they are getting more trade on any line than you are, find out the reason, then direct your advertising so as to change this state of affairs as soon as possible.

The following officers were elected for the ensuing year:

President—H. A. Cole, Council Bluffs.

Vice-President—S. R. Miles, Mason City.

Secretary—C. W. Brelsford, Villisca.

Treasurer—W. A. McIntire, Ottumwa.

Executive Committee—Geo. Kent, Burlington; J. F. Doty, West Liberty; H. C. Chapin, Union; E. C. Penrose, Tama; W. H. Keating, Ottumwa; L. H. Kurtz, Des Moines; M. W. Keating, Afton; C. W. Doxsee, Algona.

Grievance Committee—A. T. Nelson, Wilton; G. C. Hillman, Grand Junction; P. P. Perrin, Burlington; Geo. W. Meador, Sibley; Chas. Swaine, Council Bluffs.

State Organizer—Mrs. Henrietta E. Kupper.

The Executive Committee also recommended the payment to Mrs. Kupper, the Secretary, for services during the past year, \$100, declaring that her services had been fully worth \$500.

The convention adjourned at 6:15 P. M. to meet at 9 o'clock Friday morning.

FRIDAY MORNING SESSION.

At the convention, convened Friday morning, Mr. Conchar, of Schreiber, Conchar & Westphal, extended a cordial invitation to the dealers to make Dubuque their next meeting place, and the convention decided on that city for the 1901 convention of the Association.

The splendid services of Mrs. Henrietta E. Kupper in gathering in members for the Association by her splendid canvasses of the State were fittingly recognized by the Association in electing her as State organizer.

In electing her to this office the convention passed a resolution unanimously as a tribute to her grand efforts in its behalf, the wording of this resolution being as follows:

Whereas, "We appreciate that Mrs. Henrietta E. Kupper's services in the past have done more to advance the membership and success of the Association than any other one officer;

Whereas, We appreciate that her work of securing members has been very heavy and has met with remarkable success; be it

Resolved, That we extend to her a vote of thanks and request that this action of the Association be published in the trade papers."

Minnesota and Northwestern Retail Hardware Association.

The Minnesota Retail Hardware Association and the Northwestern Retail Hardware Association held a joint annual convention at Duluth February 14th, 15th and 16th. The convention was held in the Armory, and was by all odds the largest and most successful convention that they had ever participated in.

In the morning the executive committee as usual started the proceedings by holding a meeting in which the preliminaries of the convention's work were laid out in a manner that should be followed in the proceedings. The opening of the convention proper was at 2 o'clock in the afternoon, when the convention was called to order by the president, James E. O'Brien, of Crookston, who delivered his annual address. That this was an interesting one and well appreciated by those who listened to it will be made evident by the following extracts:

The year just past has been an eventful one in the annals of business. I believe there has not been a time in the commercial experience of any of my hearers when there has been so marked a tendency toward an advancing market on all materials and manufactured articles that are embraced in the business we represent.

How many of us have taken advantage of this remunerative period that comes so seldom in man's business experience?

How many have allowed this golden opportunity to dwindle and pass away, the loss of which will not be apparent until we are called upon to deal with the reverses that men engaged in mercantile pursuits have to meet during periods of depression?

Business has its ups and downs, and with the same care with which we steer our ship of trade clear of the breakers in times of distress we should pilot it into ports of profit during intervals of commercial activity.

I have expressed myself to presidents of other State associations as not favoring at this time the formation of a national association of retail Hardwaremen, giving as my reason that we should have a sufficient number of State organizations thoroughly organized to make it national in character as well as name; I believe if we form an organization it should represent all that the name implies.

The organization of States now having local associations into a sectional association and called by the proper name representing strength, instead of weakness, in the territory it embraced, would, I think, best serve the present needs of those that participated in its formation.

At the conclusion of the president's address, secretary-treasurer Thomas McCracken, of Minneapolis, delivered his annual address, which we give in full, as it gives in detail the Association work transacted through his office during the six months since he was elevated to the high position held by him at present.

The Secretary then read his annual report, as follows:

SECRETARY MCCracken's REPORT.

To the Minnesota and Northwestern Retail Hardware Dealers in Convention Assembled:

Less than six months ago it was my privilege to become associated with you as your secretary, and I herewith present to you an account of my stewardship for and during the time mentioned.

Our present membership numbers 384, which gives us a net gain of 54 members during the year. This should be encouraging to us as it evidences a healthy growth, showing that the seed has been sown in fertile soil, and will, I trust, return to us an hundredfold at this annual meeting.

Our membership in the State of Wisconsin is 268, in North Dakota 110, making a total membership of 762 in States comprising our Northwestern Association.

The work of our State Association, as well as of Wisconsin and North Dakota, has been of educational benefit,

resulting in the growth and dissemination of the principles underlying our organizations.

We now have the co-operative support of nearly all Northwestern jobbers visiting the trade covered by our Association work, and also the names of over 600 manufacturers from all over the country who are united with us. It only remains for each individual member to be loyal to himself and his obligations during the coming year to witness a stampede coming our way of the remaining "almost persuaded" ones.

During our term of office we have received and answered over 1100 communications; mailed and addressed over 1900 letters and circulars; tabulated and distributed to jobbers and manufacturers the names of over 150 individual dealers and firms who are conducting their business in a manner detrimental to the interests of the retail dealer. We have received nineteen complaints, coming to us from different members of our Associations, and are pleased to inform you that every one has been satisfactorily adjusted, in full accord with the principles of our work.

In order that all may fully understand the nature of what we call a complaint, I submit you the following correspondence, with names of parties omitted.

* * *

This was, comparatively speaking, an easy one; we have others that have required over twenty letters before we have arrived at an adjustment satisfactory to our Association.

I would right here like to ask all Hardwaremen present, whether members of our association or not, if this one case alone is not worth the price of admission? This correspondence, remember, was with one of the largest houses in their line visiting your territory. Did they not recognize our associations as being a factor in their business life worthy of consideration? Think it over and join with us if you think so.

The detailed work of our association is many sided—liable to be misunderstood—and as varied as would be the different ideas of our individual members upon any question before them. It is, moreover, far reaching in its result, not only to ourselves as an association, but to each individual member thereof. Our rules and regulations, however wisely framed, are but empty sounding phrases if you neglect to carry out the principles they stand for and represent. How many of our members during the year past have given the "glad hand" in all their purchases to jobbers and manufacturers who are working with us? In so far as you have, you have helped us and broadened our sphere of usefulness; in so far as you have not, you have worked against your own best interests.

The object of our association work is to help you. We cannot do so, however, unless you are willing to try and help yourself. We want every member to live up to the faith that is in him, and wherever he may be we want him firm of purpose.

You must remember that your officers and executive boards are simply servants in your hand, they but voice your sentiment, and through you alone can they work out the duties intrusted to their care. Each individual member should realize that he is a responsible unit in the frame work of our association, and has at all times a bounden duty to perform which he cannot delegate to another and which he should not be willing to ignore. We want to increase our membership. Can you not help us by a little effort on your part in your own county? We would like to have each member agree to add one new name to our association list the coming year. We would then be able to issue bi-monthly reports to each member and furnish them with an Association button.

I do not think we can be too closely in touch with each other, nor can we expect very much enthusiasm among ourselves if we do not exchange the time of day oftener than once a year.

The annual meeting is most assuredly the place to take these and other matters pertaining to our association under advisement, if they merit consideration. This is the place where your voice and vote can give them effect, where your counsel and earnest endeavor will count the most, and where you can understandingly assist in solving the many knotty problems presented to us.

* * *

The branch of our association work known as the Retail Hardware Dealers' Mutual Fire Insurance Company has required continuous, constant and unremitting labor to place it upon a successful working basis. In this work we have had the assistance and support of our members, the counsel of our Insurance Board and of the Executive Com

mittee; but to President A. C. Hatch, Battle Lake, Minn., of the insurance company, and President Jas. E. O'Brien, Crookston, Minn., of the Hardware Association, we are deeply indebted for their untiring devotion, their never faltering purpose in furthering, promoting and establishing our company.

* * * *

The trend of affairs to-day is largely toward centralization in all lines of manufacture and in the marketing of all products. Trusts are multiplying and absorbing the smaller plants, doing away so far as possible with competition, which is the very life of all trade. We should carefully consider how we can best check this growing tendency which is surely eliminating the cardinal principles of business usages accounted wholesome, equitable and just in all times past. The issue is fully upon us and must be met by unity of action along the line marked out by our own and similar associations throughout the country.

As we grow in numerical strength so will our influence broaden. Our association will become invaluable and profitable in proportion to the interest each member feels in its welfare and success. You can assist your secretary by offering suggestions and reporting all matters which should have his attention; he cannot be supposed to remedy evils and adjust differences of which he has not been informed.

To the officers and directors with whom we have labored we desire to return our sincere thanks for courtesies received. The harmony and good will existing between us have contributed largely toward furthering the object and principles of our association work.

We cordially invite all present to become active members with us.

Now is the time and this is the place to enroll your name with your brother Hardwaremen who have labored four years to bring about the beneficent result to which this annual meeting attests. You cannot afford to stand idly by and accept gratuitously the labor of their hands without becoming an active co-laborer with them.

In all that pertains to your business life we assist and strengthen you; through your own unaided efforts you would accomplish very little, but think what a power you become when speaking through your State association.

Gentlemen of the convention, it rests with you to say whether an onward and upward impetus shall be given to our work to-day. In your keeping lies the responsibility of our future progress. If your hearts are in the right place the annual meeting of the Hardware Dealers' Association for 1900 will be a century mark, emblazoning our pathway in the years to come. Duluth will not have been discovered in vain, and the voice of our deliberations, like the name and fame of our peerless sister city, will resound throughout the land.

The proceedings were enlivened on Wednesday evening, when, in response to the invitation of the jobbers of Duluth and the Twin Cities, the delegates to the convention and their friends in the Hardware trade assembled in the dining room of the Spalding Hotel to enjoy the banquet which had been extended to them. E. A. Moyer, well known in connection with the Marshall-Wells Hardware Co., had been given authority to manage all the proceedings connected with the banquet, and was admirably fitted for the position of toastmaster. It was a thoroughly enjoyable entertainment and well appreciated by those who were present.

Thursday morning the Association met in executive session with President T. H. Caley in the chair. The Committee on Nominations presented their report, naming the following list of candidates for the Executive Committee: One year, C. S. Pierce of Duluth, C. F. Stremel of Minneapolis and H. Hauser of Gibbon; two years, A. C. Hatch of Battle Lake, Joseph Mason of St. Peter and C. F. Ladner of St. Cloud; three years, S. R. Nelson of Owatonna, W. H. Tomlinson of Le Seur and E. H. Loyhead of Faribault. No other nominations being made the entire list was unanimously elected.

Mr. Stebbins presented an amendment to the constitution, changing the date of meeting to the fourth instead of the second Wednesday in February. This amendment was adopted after some discussion. A discussion followed in

connection with numerous points of contention, which was participated in by many of the members who were present, a number of whom gave their views in regard to the same, after which the Committee on Resolutions presented the following:

Whereas, This Association deems itself fortunate in having as its executive a man who has shown special fitness for the position, and one who has given to his duties much time, thought and study, and has given the Association an able administration, therefore be it

Resolved, That the thanks of this Association are hereby tendered to our worthy president for his unceasing efforts and untiring devotion to the business of the office, and for his uniform courtesy to all with whom he comes in contact.

Whereas, Various trade papers have sent and do send representatives to our meetings, and

Whereas, It is necessary that full reports be published of our annual meetings, and

Whereas, They make no charge for the publication of these reports, therefore be it

Resolved, That we, the members of the Minnesota Retail Hardware Association, do heartily extend our sincere thanks to the various trade papers for their co-operation and assistance.

At the Thursday afternoon session a paper was read on "The Dignity of Trade," by T. T. Bacheller, of *The Hardware Trade*, of Minneapolis. It was an extremely interesting paper, and was listened to attentively. This was followed by a paper on "The Buying of Novelties," by E. H. Loyhead, of Faribault, in which he made illustrations from his own experiences covering a number of years, that were unique and graphic. We quote the following:

Twenty years ago I thought I knew all about the Hardware business just because I had been attending college. A smooth pilgrim floated in one day with an innocent looking green bag under his arm, and the eyes with which he sized me up were as innocent as this bag which he carelessly cast upon the counter. I didn't know that he sized me up then, but I know it now. He went down into that bag and pulled up a thing that he cheerfully informed me was a Pleater. He talked and he worked. He worked the Pleater, and he worked me. He pleaded and he pleaded. He made box pleats and side pleats and pleats. It was a thing with a wooden bottom and wires with cranks on, with a coke tin hook to pull the cloth with. I bit and then bought. I paid him a dollar and a half apiece for those blooming things, which he delivered on the spot, spot cash, no discount. I think he had me figuring that I was going to make \$24 on an \$18 deal. I was more hopeful then than I am now, especially on Pleaters. Well, I've got most of them yet. I sold a few finally for 75 cents each, and had to take every one of them back or have a row. Sometimes I took them back, sometimes I had the row, according as my mood was cheerful or pessimistic. I finally hid them where even the clerks couldn't find them when they inventoried, but they kept fresh in my memory. I couldn't live them down. Then I brought them out into the light of day and gave them a place of honor on the shelves.

Sometimes a fellow comes in with a new-fangled contrivance and begins on me with the "best ever," and I let him go on with his talk; I am not afraid any more. The thing may look good, I may be losing the chance of my lifetime. My competitor may give me a jolt if he gets it away from me, but I say softly to myself the magic word "Pleaters," and I am safe.

One of these gentlemen came into see me when I was in Seattle with a patent arrangement for locking sash without weights. I knew several kinds of such locks, and knew nothing much to their credit, but his was a new one on me. He only wanted to sell me 24 gross for a sample order. They looked all right, but I dwelt in the past, and said Nay! He waxed sarcastic, and said that if all men were as big mossbacks as I was we would still be using tallow dips, and traveling by ox team, but he didn't phase me. I just said, "Pleaters, Pleaters" to myself and serenely passed him up.

H. S. Cleveland, of Minneapolis, followed with a paper on "The Elements of Success in Business," in which his original views were given in a very readable manner, and met with the thorough approval of those present.

Edward A. Moyer, of the Marshall-Wells Hardware Co., Duluth, delivered an address on the subject of "Comb-

nation and Association." He was thoroughly conversant with the subject, and made an address that was listened to with considerable interest. We make the following extracts from the same:

Combination and association both profess as a valid excuse for their existence the condition into which the business life of this country has been drifting, and both ostensibly seek to remedy existing evils in their own way. The future only will show if the correct remedy has been prescribed.

* * * *

Your association, as I understand it, was called into existence for the very laudable purpose of endeavoring to correct some of the abuses which have gradually become a part of our business life, the correction of which would serve to ameliorate the condition of every retailer, whether a member of the association or not, and on this account it assumes the position of fostering the interests of the entire retail trade.

From this standpoint, all the good results obtained through your association benefit not only your association as a whole and its members individually, but the trade at large, and, carried out on these broad lines, will ultimately make your association a tower of strength.

On the other hand, the attempt to benefit individuals at the expense of the many will be a stumbling block in the way of your future growth, and your rule and guide should always be broad, liberal judgment, moderation and conservatism.

There should not be, and I can see no good reason for, any antagonism between the jobber and retailer, or *vice versa*, for the prosperity of the one means the prosperity of the other. You cannot injure the one without affecting the other, and all differences should be open to frank discussion.

This may sound like treason to preach before a gathering of retailers, but my long connection with the retail trade warrants my assertion that you will find no better judgment or good sense in any other trade than is characteristic of the general retailer of Hardware.

Cultivate a good feeling with your competitor, talk over matters with him, but don't try to get even by reporting him as doing business in an unfair manner, for the chances are that you will find by becoming better acquainted with him that he is not nearly as black as you have painted him.

These matters should be carefully weighed before forming hasty opinions. I do not believe that jobbers or manufacturers when once agreeing to stand by your association are spending any of their time trying to circumvent such promises, and any deviation may be laid to unintentional blunders which are as annoying to them as they are to you. Your actions and policies since the formation of your association are, I believe, approved by those with whom you come in contact, and I trust will so continue.

Let your policies be broad and liberal, judge wisely, act with conservatism, then will future historians applaud your work and coming generations of Hardwaremen rise up and call you blessed.

A. C. Hatch, of Battle Lake, who is president of the Retail Hardware Dealers' Mutual Fire Insurance Co., delivered an address on the subject of "Mutual Fire Insurance." As this movement is evidently gaining ground in connection with Hardware associations, he went through the various plans connected therewith in a thorough manner, in order to impress upon those present the importance of adopting this method of co-operative insurance. Among other things he said:

One year ago at our annual meeting at St. Paul the subject of "Mutual Fire Insurance" was brought up. Little thought had been given this subject, and it was a difficult matter to raise even a discussion on that subject. Finally a committee was appointed to investigate the subject, and to report at (this) our next annual meeting. The discussion at the meeting and the appointment of the committee created an interest in the matter of insurance among the members of our Association.

The plan of the Lumbermen's Mutual, which had just passed through five years of successful business, was studied, and your committee decided to take action. The necessary legislation was secured, and in May the Minnesota Retail Hardware Dealers' Mutual Insurance Co. was organized. July 1 we were prepared to take applications. Lack of efficient help and the necessary funds retarded the

work. Unexpected obstacles were met and overcome. We were ready to do business in November, but as it would save us our '99 fees, we did not begin issuing policies until January. We now have applications and policies aggregating \$500,000.

In our work of organization we have followed the plan outlined by the Lumbermen's Mutual as closely as possible. Their secretaries, Mr. Holles and Colonel Fahnstock, have always been ready and willing to aid us, and our Association will always owe them a debt of gratitude.

* * * *

Now a few words concerning our plan. I will try to make it as clear as possible, and will to the best of my ability answer any question you may desire to ask regarding it. We can, as in the case of the Lumbermen's, only solicit business in Minnesota. But we can receive business unsolicited from adjoining States, and we hope by the end of this year to be carrying nearly all the desirable Hardware dealers in North Dakota and Wisconsin. Our maximum policy is \$3000; minimum, \$500. Our safety lies in the fact that our risks are separate. We cannot suffer a great loss at a single fire, which gives us a great advantage over other mutuals that do a general business.

* * * *

To convince you that our mutual company will save you money I will call your attention to this fact: The losses by fire of the retail Hardware dealers of the State did not aggregate \$2800 for the year 1899. The dealers, 1100 in number, are carrying at least \$3,000,000 at a rate ranging from 1 to 6 per cent. You can readily see that there is an opportunity to practice economy, and I hope that every dealer present not now on our books will before returning home consult our secretary and make arrangements for insurance.

Selection of a place of meeting for next year was taken up, and it was decided that Minneapolis was the choice of the convention. The convention adjourned to meet at Minneapolis on the fourth Wednesday of February, 1901.

Quite a number of manufacturers and jobbers had little private exhibitions of various goods, which formed an extremely interesting feature of the convention, and enabled the dealers present to become familiar with lines of goods which on ordinary occasions they would lack time to thoroughly inspect.

Recent Trade Publications.

JOS. DIXON CRUCIBLE CO., Jersey City, N. J. Four-page leaflet illustrating and exploiting their American Graphite Pencils, the cover of which is artistic and unique, giving the appearance of a card and pencil being held by a rubber band, which is shown in such a perfect manner that it makes one feel as though he ought to pull the pencil out and get to work at once. This company is noted for the very novel application of the fine arts in connection with their advertising department. Even what would be considered as a trifling matter by other manufacturers is made use of by them to show how cleverly good advertising can be accomplished in this manner.

THE CRONK HANGER CO., Elmira, N. Y. 1900 catalogue of Hardware specialties, covering twenty pages, including in its contents Cronk's barn door hangers and rail, hay-fork pulleys and stay rollers; automatic sliding door latch, patent hasp, latch and staple, wrought steel garden rakes, wire lawn rakes, garden mattocks and grass hooks, and a large and extensive line of Cronk's pliers so well and favorably known to the trade. This assortment includes the fencing plier, wire cutter and bender, "Button's pattern" pliers, "Stub's pattern" pliers, Giant end cutting pliers, and combination cutting and gas pliers. This line also includes side cutting, flat and round nose pliers, and solid steel burner and gas pliers, and linemen's splicing clamps, and pruning shears in great variety, etc.

D. W. BOSLEY CO., Chicago, John H. Graham & Co., No. 113 Chambers Street, New York, agents. Four-page leaflet illustrating Bosley's rubber window cleaners, floor scrubbers, counter cleaners, etc.

NEW GOODS AND SPECIALTIES.

Cyclops Nail Puller.

Tower & Lyon, No 95 Chambers street, New York, are placing upon the market the Cyclops Nail Puller, which we illustrate herewith, and which possesses features of interest

that make it thoroughly up to date. It is forged from high grade steel, hardened and tempered by a special process to impart the greatest strength and durability. It will be noticed that it is of improved design, being flattened on the sides so that it will not turn in the hand, nor roll from inclined surfaces, cases or counters. It is constructed so that an oblique delivery of ram blows is possible, and giving an unobstructed view of nail. The handle forming part of the pressure foot, as will be noticed by reference to the illustration, would have a tendency to save the hand from any cut or injury by a blow of the ram. At the same time the jaws can be guided directly and quickly to the nail, control of both jaws being possible. No springs are used in its construction, and the pivot is made so that it cannot become loose by strain or wear. All the steel parts are fire finished with a view of rust prevention, the ram being japanned. It is 18 inches in length, and weighs 4½ pounds. They are marketed one dozen in a case at a list price of \$18 per dozen, liberal discount being allowed the trade.

Bicycle Horse Clipper Attachment.

The Chicago Flexible Shaft Co., Nos. 158-160 Huron Street, Chicago, among the many improvements that they have made in connection with horse clippers, are distributing through the Hardware trade the new "Chicago" Bicycle Clipper Attachment which is shown in the illustration which we give herewith. This attachment is ex-

ceedingly novel, and yet quite simple, consisting of a fibre friction roller held yieldingly against the rear tire of the bicycle by a suitable fixture. The fibre roller is directly connected to the flexible shaft without gears. The shaft is nine feet long, to which is attached the clipper knife. The object of making the shaft of so great a length is to permit an ample range to reach every part of the horse. An outfit of this description is made to fit any bicycle without alteration of any kind. It is only necessary to

place the bicycle in its support and work pedals as when riding. In fact, a small boy could furnish sufficient power for the operation of clipping the horse. The work is very light. The bicycle easily develops an excess of power to that required to drive the clipper. The clipper is absolutely noiseless, all parts being made in the most careful manner, and every one fully guaranteed. Further information will be given by the manufacturers on application.

"Marguerite" Swing and "Hann" Hammock.

The Hann Mfg. Co., Columbus, Ohio, are placing upon the market the novel line of goods, illustrations of which

FIG. 1.

we give herewith. Fig. 1 shows the "Marguerite" Swing, which is an article designed for porches, inside doors, camping resorts, picnics, etc., and consists of a knock down frame, forty feet of white sash cord run through double pulleys, and is manufactured from blue and white striped duck, having white fringe all around it, giving it an extremely ornamental appearance. It will be found sufficiently strong for adults, while at the same time it is so arranged that it can be instantly adjusted to any desired height of seat. The size is 2x3 feet. Fig. 2 shows the same swing folded for packing or carrying, showing how extremely portable a package can be made of this new and desirable specialty for transportation purposes. Fig. 3

FIG. 2.

illustrates the "Hann" Hammock. This very handsome and useful hammock was patented in 1899, and embodies in its make-up the latest improvements in this particular line of goods. It can be instantly converted from a sitting to a full reclining position and vice versa. It holds its full width at all times; therefore it cannot become readily displaced or assume such form as to make the user feel warm or uncomfortable. It is provided with invisible slats which are located in a manner that prevents them coming in contact with the bony parts of the body. It is also provided

with upright arms that adjust themselves to proper position for resting one's arms when reading. It really constitutes a swinging arm chair, as it can be placed so that it rests the body entirely, supporting the head and back in a very favorable manner. It is built of bright, fancy, striped

FIG. 3.

duck, and made sufficiently strong to permit heavy-built people to use the same with comfort.

Boss Washing Machine.

The Boss Washing Machine Co., Cincinnati, Ohio, are placing before the Hardware trade the improved washing machine illustrated herewith. It is a patented article, having the latest improvements, and as a double-acting washer is claimed to be superior to any similar machine on the market. The steel frame cylinder which is one of the many improvements that have been recently added to this machine, has made it extremely popular, as it allows 2½ inches more space for clothes, and under the circumstances gives a better circulation of water through the wash, making the operation of cleansing much more thorough, and in less time than would be the case with one of more limited capacity. It is made in one regular size for family use, No. 3; and in extra large size, No. 4; and in hotel and

boarding-house size, No. 6. Further particulars in regard to the same will be furnished by the manufacturers upon request.

The "Acme" Riveter.

The Standard Specialty Co., Salem, Ohio, are placing before the Hardware trade this entirely novel and complete machine, intended to be used by hand for the purpose of mending harness and belting especially, and has so many valuable and handy uses that it will meet with a ready sale among farmers, machinists, horsemen and others who are frequently in want of something of the kind with which to make repairs. It is marketed at a moderate price, which is one of its desirable features. The machine is adapted for using No. 1 tubular rivets, which are usually kept in stock by all Hardware dealers. The work is done complete with one stroke of the lever, the rivet cutting its way

through the leather, and meeting the clinch header, which forms a perfect head on the small end of the rivet. It is portable, can be fastened to a bench, or may be operated in mending harness without removing the same from the horse. In the advertisement of this specialty, on page 4, will be found the sizes of rivets that are used in connection

with this handy machine. The working parts are all case-hardened steel, the lever being securely riveted in the machine, and with a steel plunger pin is automatically forced back in use by a strong spiral spring. This company are now manufacturing a full line of these riveting machines, including the "Acme," which was formerly made by the Deming Co.

Automatic and Burglar-Proof Sash Lock.

J. L. Oefinger, Clinton and Jefferson Streets, Chicago, Ill., is placing before the Hardware trade Oefinger's automatic and burglar-proof sash lock, here illustrated, which secures both the upper and lower sashes at the same time. It is quite necessary in Summer or in warm climates to have ventilation through sleeping rooms, and this is best secured by lowering the window from the top. When the Oefinger fastener is used the window is always locked, its action being entirely automatic and absolute security is assured for the window cannot be moved from the outside. The sash lock is finished in japan or copper and does not

disfigure the middle of the sash as is the case with other fasteners.

The Bissell Carpet Sweeper Co., in their voluminous correspondence from time to time, contrive to receive some very odd and humorous letters. The following is a sample which they recently received from one of the prominent actors now on the road to fame and fortune:

"LATEST IMPROVED.

"But It's Not to Ride the Baby on."

Seventh Avenue Hotel, Pittsburgh, Pa.

The Bissell Carpet Sweeper Co.,

No. 103 Chambers Street, New York City:

Gentlemen: Here is a money order for \$2.50. I want you to deliver to my wife one of your "latest improved cyco-bearing dust-proof-axle-tubes, anti-traveling collector, reversible-ball-spring, etc., etc., etc. In other words, the best carpet sweeper you can give up for the money enclosed. Even if it is nicked, I won't kick, but prefer oak. Please don't delay delivery.

Tell my wife it's not to ride the baby on—never mind, I'll attend to that.

I enclose address that you are to send it to.

Very truly yours,

E. L. McINTOSH.

"Mamma," said a little boy, "I wish I lived in South Africa." "Why, my son?" "Because the mammas down there don't wear slippers, you know." "Yes, my son, but you must also remember that the little boys don't wear any pants either.—*Salt Lake Tribune.*

REVIEW OF THE MARKETS.

Hardware: There is a fair trade noticeable among the jobbers; and the manufacturers are daily receiving orders which seem light compared with those which gladdened their hearts a year ago. Stocks will be kept in fair average condition by the dealers, but orders will be given without speculative feeling. The prayers of the buyers are of a kind that ask for no radical changes to upset any present conditions.

Wire Nails: As no changes in price are causing anxiety the demand for wire nails continues in a regular and satisfactory volume. The trade view with some apprehension the conditions which from strikes and other causes are quoted as reasons for short stocks. The market is firm at previous quotations, which remain as follows: f. o. b. Pittsburgh; terms, 30 days, 1 per cent. off in ten days:

To jobbers in carload lots.....	\$3.20
To " in less than carload lots.....	3.22½
To retailers in carload lots.....	3.35
To " in less than carload lots.....	3.45

In New York City the demand is considered good, and manufacturers' prices remain without change. Quotations are as follows:

To retailers, carload lots on dock.....	\$3.53
To " less than carloads on dock.....	3.66
Small lots from store.....	\$3.60 to 3.75

Cut Nails.—The market on cut nails is held firmly at quotations established as noted in our previous issue, which make the prevailing quotations f. o. b. Pittsburgh; terms, 30 days, 1 per cent. off in ten days:

1000 kegs and over.....	\$2.50
In carload lots.....	\$2.55
To jobbers in less than carload lots.....	2.60
To retailers ".....	2.70

New York prices remain as follows, with business fair:

To jobbers in carloads on dock.....	\$2.73
To " in less than carloads on dock.....	2.78
To retailers ".....	2.90
Small lots from store.....	\$2.90 to 2.95

Barb Wire: Orders for this staple are not as yet increasing in size; and the trade justified by the lessened demand from the consumers, are ordering only conservative quantities. Prices remain as previously quoted, f. o. b. Pittsburgh; terms, 30 days, or 1 per cent. off in ten days:

To jobbers in carload lots, Painted.....	\$3.65
To " Galvanized.....	3.80
To " in less than carload lots, Painted.....	3.07½
To " Galvanized.....	3.82½
To retailers in carload lots, Painted.....	3.80
To " Galvanized.....	3.95
To " in less than carload lots, Painted.....	3.90
To " Galvanized.....	4.05

Smooth Wire: Orders for smooth wire are coming in in fair volume, the belief being general that no immediate advance in price is probable. Quotations are as follows: f. o. b. Pittsburgh, terms thirty days, or 1 per cent. off in ten days:

To jobbers in carload lots.....	\$3.05
To " in less than carload lots.....	3.07½
To retailers in carload lots.....	3.20
To " in less than carload lots.....	3.30

The charge for galvanizing is 50 cents on sizes from 6 to 14 inclusive; on Nos. 15 and 16, 85 cents, and on Nos. 17 and 18, \$1.10.

Cordage: The market continues without change. Previous quotations are consequently sustained. For carload lots they are as follows with an advance of a quarter of a cent for less quantities, f. o. b. New York, Boston or Philadelphia:

Manila, 7-16 inch and larger.....	per pound, 15½ cents.
" 3½ inch.....	16 "
" 3½ and 5-16 inch.....	16½ "
Sisal, 7-16 inch and larger.....	10½ "
" 3½ inch.....	11 "
" 3½ and 5-16 inch.....	11½ "
Lath Yarn.....	10 "

Manila Tarred Rope, 15-thread, 15½ cents. Manila Hay Rope, medium, 15½ cents. "A" grade of Jute Rope 7½; "C" grade 7 cents. Jute Wool Twine, 4 ply only, per pound, 7 cents; all other sizes, 7½ cents

Binder Twine.—The market is firm at ruling prices which are as follows, f. o. b. New York, Philadelphia or Boston, with a reduction of ¼ cent per pound for orders less than

a carload lot and over 10,000 pounds, and a reduction of ¼ cent per pound for carload lots:

White Sisal, 500 feet to pound.....	Cents. 11½
Standard, 500 feet to pound.....	11½
Manila, 600 feet to pound.....	14½
Pure Manila, 650 feet to pound.....	15½

Shot: Under date February 17th the following prices on shot are announced by the Eastern manufacturers, net cash 30 days, or 2 per cent. discount for cash in ten days:

Drop shot, sizes smaller than B, per 25-lb. bag.....	\$1.47
B and larger sizes,.....	1.72
Buck shot, per 25-pound bag.....	1.72
Chilled shot, " ".....	1.72
Dust shot, " ".....	2.10

There is the usual abatement in ton lots of 10 cents per bag of 25 pounds.

Fluting Machines: North Bros. Mfg. Co., Philadelphia; John H. Graham & Co., No. 113 Chambers Street, New York, agents, have advanced prices 10 per cent. on Fluting Machines and Hand Fluters.

Brass, Brass Wire, Etc.—Under date of February 14th a revised discount sheet has been issued by the manufacturers of brass, brass wire, etc. These prices apply to lots of 100 pounds or more in one order. Terms, net cash 30 days, or ¼ per cent. discount for cash in ten days:

	Per cent.
Roll and Sheet Brass.....	25
Patent Leveled Sign Brass.....	20
Platers' Metal, thinner than No. 38.....	30
Sitting Charges (Brass).....	25
Sawing Charges (Brass).....	25
Jewelers' or Gold Metal.....	25
Printers' 2 x 4 Sheets and Galley Sheets.....	25
High Brass Rods.....	25
Wire in Coils (No. 20 or coarser), excepting Copper Wire.....	25
Brazed Brass Tubing.....	25
Brass Moldings.....	40
Door Rail.....	40
Iron Lined Brazed Tubing.....	60
Brass Segments.....	25
Brazed Taper Tubes.....	40
Angle and Channel Brass.....	40
High Brass Scrap.....	110
Low Brass Scrap.....	120
Gilding and Rich Gold Metal Scrap.....	130

Horse and Toilet Clippers: We have received the following from the Coates Clipper Mfg. Co., Worcester, Mass.: Alfred Field & Co., No. 93 Chambers Street, New York, sole agents. The circular is self-explanatory:

FEBRUARY 8th, 1900.

The present serves to call your attention to the patents we hold for making of Ball-Bearing Horse and Toilet Clippers, which we claim are being infringed by certain manufacturers. We beg to say that suit has been commenced in the U. S. District Court for infringement of the Lee Patent which is held by us, and any persons, making selling or using clippers which infringe our patents will become liable for damages, and it is our intention to push the matter to its fullest extent.

Linseed Oil: Dean Linseed Oil Co. quote as follows:

In lots of less than 5 barrels.....	57 cents per gallon.
In lots of 5 barrels or more.....	56 cents per gallon.
The five-barrel price only applies to deliveries of that quantity at one time.	
Bolled linseed Oil, 2 cents per gallon higher than Raw.	
Calcutta Oil, 68 cents per gallon.	

THE PHILADELPHIA TRADE.

Winter seems to have changed his tactics of late, and our snow storms come in February instead of December. Until the last week, the winter has been unusually open and mild. On the 17th we had our first real snow storm of the season, and coming so late in the year, it does not have its usual beneficial effect on trade, and is more apt to put a quietus for the time being on Spring trade. This, however, is only temporary. There is a fair demand for all kinds of Hardware, and the volume of trade is larger than for several years past, while prices are well maintained and labor was probably never more fully employed.

The situation on Wire Cloth is daily growing more acute and already we hear of the price in other cities being advanced to \$2 per hundred square feet. The supply is very scarce, and a famine in that line seems to be in prospect.

We still hear from manufacturers a great many complaints in regard to the difficulty in getting material, and frequently this is made an excuse for delay in filling orders. Many manufacturers are still far behind, and particularly in the lines of machine bolts, coach screws, carriage bolts, etc., there is a general complaint that such factories are from two to three months behind on orders.

There seems to be a legitimate demand for these goods which is in excess of the present capacities of the factories

In anticipating the future, it must constantly be borne in mind that the export trade is entirely a new factor in the situation, and one which did not exist twenty years ago. During the last two or three years the export business has developed amazingly and now constitutes a very large portion of the demand, and is a great influence in steadying the market and maintaining prices.

BIDDLE HARDWARE CO.

THE BALTIMORE TRADE.

This section has been visited recently by a heavy fall of snow, which, being rapidly dissolved by the solar rays, has increased the difficulty of travel, previously existing, over the country roads.

Our traveling salesmen report the Retailers as having large stocks on hand, and that they are purchasing cautiously and mainly seasonable goods.

A lull in trade in consequence, is quite natural, but the monotony of small orders is occasionally broken by opening bills from those who have just launched into the Hardware business.

The sudden death of one of the members of our firm necessitates our taking his interest out of our business, and in order to do so promptly and with equity to all concerned, we have decided to close out our entire stock of goods for cash, or on short time, and as soon as this settlement is made, we will resume with additional capital and as flourishing as ever.

We are making, therefore, no contracts with manufacturers at present, and are only purchasing such goods as will enable us to fill the orders received when we can do so profitably.

Having a stock of over \$40,000 to offer our competitors and customers at interesting prices, we respectfully solicit their valued favors.

The very liberal orders placed with us during the past few weeks by the other Baltimore jobbers indicate their friendship towards us and are greatly appreciated; we have still many goods on our shelves and hope to move them quickly. Collections are improving.

H. W. WEBB & SONS.

THE NASHVILLE TRADE

Business, which throughout the entire month of January was all that could be expected, has for the month of February shown quite a falling off. We attribute this to a great extent to two causes. One, the unfavorable weather conditions which have prevailed throughout the entire month; the other is due, we think, to the fact that in following closely the advances on a great many lines of goods, they have reached a point where the prices are almost prohibitory, and merchants who in previous years bought liberally, have shown a much more conservative spirit, claiming that their customers cannot or will not pay the advanced prices, and will pull through with old tools and implements. More particularly is this noticed on chains, hames and that class of goods which are sold at this season. We think, however, should the weather open up nicely in March, and there comes no weakening in the price of any line of goods, the people will realize that the decline is not coming, that they must have the goods, and will purchase more liberally than they had intended.

We are happy to state that collections are right up to the mark.

Builders' Hardware will begin to move with the advent of Spring weather, and notwithstanding the advance both in material and labor, we anticipate a good business on this line.

Throughout the section of country contiguous to Nashville the wheat prospects were never better. This, in connection with the price of cotton and the prices which are being realized for nearly all farm products, will, in our judgment, have a happy effect on business.

Take it altogether, we think the prospects were never better for a successful year's business.

H. G. LIPSCOMB & CO.

THE CLEVELAND TRADE.

Are National Banks monopolies? The legislation creating National Banks is one of the best results of the Civil War. No more democratic system can be devised, and when the pending amendments are enacted no more complete and perfect banking system will ever have existed. The tax on circulation was a mistake, as it acts as a penalty against issue. Removing this tax and placing it on capital will induce issue.

Any five men, or any 100 or more, in any location can organize and issue the currency needed, and the bills of a bank of \$25,000 capital are as good as one of twenty-five millions. No legislation will be necessary to increase or decrease the currency. The law of supply and demand will do its perfect work. Nowhere could capacity to find fault with such a system be found save in a politician hunting for an issue. Everybody who can make their notes secure can issue them, paying only tax sufficient to repay the government for expenses involved. The banks have no exclusive privileges, no protection that is not universal, no opportunity for gain save through service. Any one can become a stockholder and have their investment carefully supervised and protected by the imposition of severe penalties for malfeasance of officers. It is a perfect system of competition, the benefits of which accrue to all people, as it will give us what everybody wants: plenty of good money.

The inherent strength to bear and sustain the great increase in prices is a favorable aspect. The accumulated capacity of years of economy is a lesson in economics.

February shows considerable decline in trade and some delay in payments. Speculative buying has entirely ceased and attempts to reduce stocks so universal, the trade will be light for early Spring. This does not show anticipation of decline so much as a desire to reduce stocks to a normal amount.

Delay in payment is caused by over-purchases. Manufacturers and jobbers must be patient with small orders until stocks have been reduced, when they can expect good business again. The country is in excellent condition, as business men made money in 1899 and must content themselves with the expectation of a good trade later.

The effect of high prices on trade is surprisingly small; men buy and sell with the same confidence they did a year ago. The difficulty in securing a supply in many lines exists. "Can you furnish the goods promptly?" accompanies many inquiries for prices, and must be answered cautiously if one is to fulfil his contracts. A good many of the manufacturers are still behind on '99 orders.

The jobbers and manufacturers of Cleveland are preparing to entertain the Hardware dealers of Ohio, who are to hold their sixth annual convention here this month.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE PITTSBURGH TRADE.

Spring orders have been generally placed by the larger class of retailers and the smaller stores will not buy until the goods are actually needed. Shipments of these advance orders are now being made, although in some places country roads have been so bad as to prevent hauling. Just now we are having some of our belated winter weather with light snow.

Among the industries feeling the great improvement in business is the lumber interest. There are still some districts in Northwestern Pennsylvania where there is good timber, and recently West Virginia is opening up good tracts; these are all doing well.

Interest centers in the partnership dispute of the Carnegie concern, and profits by millions are passed about as freely as thousands heretofore.

The Hardware trade are in favor of expansion; witness the great variety of goods added to the line of late years. Among the latest items are typewriters. We have ourselves taken the Agency for the "Oliver," which is a high grade machine with visible writing and has been adopted by a number of the largest concerns in our city.

LOGAN-GREGG HARDWARE CO.

THE CHICAGO TRADE.

We had about come to the conclusion that we were at the end of advances in sheet steel, galvanized iron and other heavy goods of that class. It seems, however, the manufacturers have a different view of the case, and have commenced to charge us \$4.00 per ton advance on these articles, to take place at once. This makes an advance necessary of 20 cents per hundred pounds on all sheet steel, sheet iron and galvanized iron. Until about two weeks ago, for 60 days the last named article seemed to be running weak in price, both with manufacturers and jobbers alike. At the present time, however, we understand that there is a very firm feeling in the price of these goods and also that a combination of most of the sheet steel mills of the entire country has lately taken place; that being the case, we can see no relief from present rates, and the probabilities are that jobbers will from this time forth be asked to pay additional advances on these goods as we come nearer to the Fall trade. For the general line of goods, however, there seems to be no let up in the demand, and

We have it. Do you need it?

JAP-A-LAC
New Wood Finish

For Floors, Interior Wood-work, etc.
"WEARS LIKE IRON."

It makes old Floors, Front Doors, Wood-work, Oil Cloth, Linoleum and Furniture look like new. It produces a smooth, hard, brilliant finish, and is as lasting as Japanese Lacquer. Samples of finished wood showing the following colors mailed free: Oak, Walnut, Drab, Malachite Green, Ox Blood Red, Spruce, Cherry, Mahogany, Black, Yellow, Ivory and Natural.

Write for our prices and dealers' discount.

The Glidden Varnish Co., Cleveland, Ohio, U. S. A.

we can only conclude that consumers are using a great many goods regardless of the cost.

On all lines of Spring and Summer goods our men have taken more than their usual proportion of orders, and we are happy to state that we have had no dull season through the winter, and are at the present time very busily engaged on our early Spring orders. We have lately sold three new stocks of goods, sending a full carload of miscellaneous goods to one party this week, in addition to our usual shipments of carload lots of heavy goods.

WELLS & NELLEGAR CO.

THE BIRMINGHAM TRADE.

We report a good demand for all lines of Hardware and machinery. The lumber trade is active and we understand at good prices. This has stimulated the demand for saw mills and mill supplies. The furnaces and mines are all running full time and other furnaces are being put in shape to blow in which will further increase the output of pig iron for which there appears an unabated demand without any weakness in prices. One important announcement for the week is that the Tennessee Coal & Iron Co. have bought the Bessemer Rolling Mill recently and will proceed to operate the same in the near future. We also hear that the Alabama Steel & Wire Co. will start up their mill to making wire, wire nails, wire fence, etc., about March 1st. The architects' offices report prospects of much building this year. All this added to the fact that the people of Alabama have the spirit of building cotton mills and that cotton is bringing a good price, should make 1900 a record year to compare subsequent years with.

MOORE & HANDLEY HARDWARE CO.

THE DAVENPORT TRADE.

Speculative buying seems already a thing of the past. While incoming orders are numerous, the aggregate of sales is not large and the tonnage will not exceed that of the corresponding period of a year ago. There have been a few small failures that may have been the result of the present bankrupt law.

Seasonable goods, such as shovels, sleigh bells, hand sleds, skates, etc., have had hard sledding on account of the open winter and a short crop of snow and ice. There are many inquiries for prices of staple goods and also for such articles as are used in the Spring and it may be that next month will show an improvement.

Collections are satisfactory.

SICKELS, PRESTON & NUTTING CO.

THE OMAHA TRADE.

There is little change to note in the general trade conditions in this section. Notwithstanding the advances in prices trade still maintains a liberal increase over the corresponding period of a year ago, and the advance orders for Spring goods are all that can be reasonably expected. The condition of the country never was better, and farmers who, a few years ago were discouraged and unable to pay their bills, now have money in the bank and are in easy circumstances. While the general volume of trade is in advance of a year ago, a sluggish movement may be noted in heavy goods, which apparently have reached a price that makes consumers indisposed to use them in any larger quantity than their necessities demand.

Collections, perhaps, are a little below the average, and yet all that can be expected, and present expectations point to an unusually large volume of Spring business.

RECTOR & WILHELMY CO.

THE MINNEAPOLIS TRADE.

Trade is unusually good for this time of year occasioned by the general mild, favorable Winter weather that we have been having up to this time. A short time ago we had some snow, that was so much needed by the loggers, and we presume that they are happy.

Prices, with the exception of nails, wire cloth and sash weights, are, we think, generally quite well maintained, and goods sold at a reasonable margin of profit based on present cost, although we occasionally run up against a builders' Hardware contract that is taken as low or lower than present conditions warrant. We all anticipate exceedingly good business the coming season.

W. K. MORISON & CO.

THE SAN FRANCISCO TRADE.

"The first seven weeks of 1900 are not what the last seven weeks of 1899 were in a business way, by several hundred per cent.," remarked a representative of the Osborn Hardware & Tool Co., "but our showing is between fifteen and twenty per cent. better than the same period a year ago. And this puts us in friendly touch with the New Year; all the more so, perhaps, because we see in the signs of the times indications of a Spring opening of a building season second to none in business activity ever experienced in San Francisco."

Hardware's correspondent also found a very satisfactory condition of feeling across the street at the busy store of the Palace Hardware Co., which, by the way, a few nights ago banqueted in fine shape all of the company's employees, a yearly habit with this house.

"Yes," responded President Ellis, of the Palace Hardware Co., "prices are up all right enough all along the line, say from 15 per cent. to well nigh 200 per cent! For instance, a year ago we were selling nails on the base at \$2.00, and now we are getting \$4.70! But nobody is complaining at this upheaval in prices; rather on the contrary, for everybody, both merchant and consumer, are better conditioned, and the status of harmonious trade relations is vastly improved. I mean by this last remark that, whereas, up to much less than a year ago jobbers were doing a retail business and we, a retail house, were getting goods across the continent from manufacturers in carload lots, and that now our jobbers are keeping within their traces and we are giving them our orders. No, I do not look for any marked advance in prices, and therefore do not believe that any element of speculation has entered any Coast Spring orders or is likely to."

A committee from the Pacific Coast Retail Hardware Association, of northern California, is now here presenting a grievance to the railroad authorities with reference to the summer cheap excursions from interior cities to the bay. Retailers of interior towns are banded together in an effort to secure a discontinuance of the cheap excursions. They claim that it is hurtful to their business, as people invariably take advantage of the extremely low rates of fare to come to the metropolis and do their shopping.

A recent mysterious fire in Baker & Hamilton's Benicia plant destroyed wooden patterns and tools appertaining to the moulders' department valued at \$5,000.

Advance cards received announce the early arrival here of George Corbin, manager of the Corbin Lock Co.; D. W. Simpson, of The Wilcox Mfg. Co., and W. E. Bartholomew, representing P. & F. Corbin, of New Britain, Conn.

Among articles of incorporation filed in the office of the Secretary of State February 12 was the Denny-Bar Hardware and General Merchandise Company, with a capital stock of \$200,000, and \$125,650 subscribed by the following directors: A. H. Denny and A. H. Bar, Etna, Cal.; J. A. Denny, Galzelle, Cal., and H. Peterson and G. F. Hel-muth, Callahans, Cal. Etna is to be the place of business.

TRADES PRESS ASSOCIATION.

THE GRAPHITE TRADE.

On a basis of January, and to this writing of February, orders, the year starts more favorably than last, and if the percentage is kept up a considerable increase in sales will result.

Increased facilities planned during 1899 and perfected now will enable us to meet the growing demands with greater promptness.

There is nothing to report as having specially prominent increase unless it is Graphite Pipe Joint Compound. This has attracted the attention of gas companies and steam fitters to such an extent that orders are increasing out of proportion to the steady demand for other graphite products.

A large bicycle business for the season is indicated by

rush orders for brazing crucibles, and numberless inquiries for terms and electros on Cycle Chain Graphites from jobbers in sundries.

Foreign orders are satisfactory, a most recent one having been received from the Azores, and we now have a salesman en route for Siberia.

The new factory, to which we have before referred, is up to the fourth story, the splendid open weather having given it an unlooked-for start.

Altogether we are happy and prospectively prosperous.
JOSEPH DIXON CRUCIBLE CO.

Advertisers' Corner.

Mr. Jorkins announced that he had found "a good bargain in men's shoes," and his wife satirically responded that his luck was better than hers had ever been.—*Ex.*

Orator—In the bright lexicon of youth there is no such word as fail.

Isaacs—Den vat use is der lexigon?—*New York Herald.*

In the mass of advertising claiming the attention of the reading public to-day only the distinctive ads, those that stand out in the foreground and show character, are successful.—*Advertising Experience.*

Mrs. Bangle—They say half the world doesn't know how the other half lives.

Bangle—Then they don't read the patent medicine testimonials.—*Judge.*

Examine the methods of your rival who has achieved a quick success. You may learn something. Be candid enough to admit to yourself that you do not know it all, and study the successful examples.—*Keystone.*

The man who contends that it doesn't pay him to advertise in the trade paper, howls like a lost kitten if a two-line item is printed in that same paper that reflects unfavorably on him or his business. What strange things there are in this world.—*Implement Trade Journal.*

A novel poster was seen by a recent sojourner in Nova Scotia. It was printed on rough paper with red paint, in a childish hand, and was tacked to a telegraph pole in a conspicuous position: "There will be a concert and fair in

Mrs. Parson's sitting-room to-day, July twenty, at two o'clock sharp. Admission—Adults, five cents; children, two cents; babies, two for a cent — *Youth's Companion.*

No inflexible rule can be laid down by which the merits of any large number of ads can be measured. What would make one ad. successful might make another fail. All depends upon environment and circumstances, which are as unstable as the combinations of the kaleidoscope.—*Advertising Experience.*

If you wish your advertisement to reach the minds of men let it deal briefly and sharply with generalities. If you wish to make an impression on the feminine mind, go into details. The typical man sees a thing as a whole: the typical woman sees the constituent parts of it. An hour is an hour to a man; to a woman it is sixty different minutes.—*Publicity.*

Henpeck—Is this the office of "Quigley's Quick Cure?"
Patent Medicine Man—Yes.

"Gimme six bottles for my wife."

"Tried all other remedies without success, eh?"

"No, she isn't sick at all; but I saw in your advertisement where a woman wrote after taking six bottles, 'I am a different woman,' and I have hopes."—*Tit-Bits.*

Advertisements represent goods. The more accurately they represent them, the better advertisements they are. Advertising which misrepresents, either by exaggeration or inadequacy, is bad advertising. The nearest an advertisement can get to the plain, naked truth, the more likely it is to be profitable. Newspaper men understand that unreliability in the matter of news is worse than no news at all. Advertisers are learning the same lesson.—*Stores and Hardware Reporter.*

Hardware Store for Sale.

GRISWOLD, MALONEY & CO., Hardware dealers, Elmira, N. Y., offer their long-established (35 years) and profitable business for sale on favorable terms. The store is in perfect running order, and has an excellent trade with the leading builders, manufacturers and country merchants. The stock will inventory from \$22,000 to \$26,000, and can be quickly reduced to \$15,000 or less if desired. Correspondence solicited only from parties having capital and ready to buy. 43

Recent Trade Publications.

THE WILLIAMSON WIRE NOVELTY CO., Newark, N. J. Large size pamphlet catalogue, 9x11½ inches in size, 60 pages, with a very handsome embossed cover, and is known as their catalogue No. 24. Printed on excellent heavy enameled paper, and is certainly the handsomest catalogue that we think has ever been issued by this well-known manufacturer. The contents show in large variety the line of cork-screws and other wire goods made by this company, from the small size, suitable for vials, to the larger ones for domestic or bar-keepers' use; also pocket cork-screws in large variety, and large size cork-screws with fancy wood heads; champagne knives, champagne taps, cigar-box openers and cork-screws combined, etc. This catalogue embodies in its contents almost everything

needed in a Hardware stock, of a line of goods as salable as the above description of its contents would warrant. The manufacturers state that any one in the trade can have one of these catalogues sent to him upon request, and we should urge the up-to-date Hardwareman to take advantage of this opportunity at once.

THE SICKELS, PRESTON & NUTTING CO., Davenport, Ia. February Price Current, size of pages same as their general catalogue, consisting of twelve pages, illustrating Batcheller & Sons' haying tools, forks, hoes, etc.; lawn and garden rakes, post-hole diggers, scythe snaths, grass scythes, lawn mowers, wheel-barrows, washing machines and other salable and seasonable goods for Spring trade.

The largest bottle manufactory is in Pittsburgh.

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Danville, Va.—A charter has been granted by Judge Whittle incorporating the Hodnett-Vass-Watson Co., who will conduct a Hardware business at the old stand on Main Street, where the business had formerly been conducted under the firm name and style of Hodnett, Vass & Watson. The capital stock of the company is to be not less than \$20,000, nor more than \$25,000.

Holcomb, Mo.—The Holcomb Hardware Co. has been incorporated. Capital stock, \$4000, all paid up. Incorporated by W. H. Lusk, C. C. Freeman, J. B. Scott and others.

Indianapolis, Ind.—The firm of W. J. Holliday & Co., wholesale and retail dealers in iron, steel, heavy Hardware, carriage and wagon supplies has been incorporated. Capital stock, \$100,000. Directors: William J. Holliday, Jacquelin S. Holliday.

Monmouth, Ill.—The McCullough Hardware & Implement Co. has been incorporated. Capital, \$15,000; dealing in Hardware and implements. Incorporators: W. W. McCullough, T. E. Stacy and T. G. McCullough.

Mt. Morris, Ill.—B. E. Avery.

Springfield, Mo.—Articles of association of the Weaver-Raymond Hardware Co. have been filed for record with Recorder Bigbee. The capital stock of the company is \$10,000.

Syracuse, N. Y.—A new Hardware store will be opened about March 1st by John B. Foley & Co., at No. 362 South Salina Street. The firm is composed of J. B. Foley, recently with Burhans & Black Co., and P. A. Roche. They are temporarily located at No. 508 Kirk Building.

Changes and Improvements.

Berlin, N. H.—Thomas Leydou has removed his Hardware stock from the Cote block into the recently repaired Thurston block, where he will carry an extensive line of Hardware and will attend to all work in the way of repairs.

Calhoun, Miss.—C. McCown and brother William, of El Dorado Springs, have bought a large Hardware store at Deepwater.

Dayton, Tenn.—The Hardware store of E. P. Johnson & Co. has been moved to the south end of town, and consolidated with that of A. Johnson & Sons.

Sodus, N. Y.—Frank D. Gaylord has sold his Hardware business to Frank H. Matthews, Henry P. Butts and Warner E. Danford.

Elkhart, Ind.—An entire new plate-glass front and a side window eight feet wide is being placed in Borneman & Doll's Hardware store at the corner of Main and High Streets. The front will be of the latest design, and will have a recess eight feet in depth.

Germantown, Pa.—E. R. Tourison, the Hardware merchant, of Main Street, has

just completed extensive alterations to his spacious store and repair shop.

Grand Forks, N. D.—The firm of Brandt & Edwards have purchased the Hardware department of Arneson & Bang, and will take possession of the business at once.

Hills, Minn.—Frank Fritz has sold his interest in the Hardware firm of Thompson & Fritz.

Jackson, Mich.—A change has taken place in the Hardware firm of Barnard, Smith & Co., Chas. E. Barnard retiring. The firm will hereafter be composed of Hugh L. Smith, S. W. Winchester and R. W. Smith, and will be known as the Smith & Winchester Hardware Co.

Lewisburg, Tenn.—R. A. Woods and Jo Fowler have purchased the stock of Hardware of the firm of McRady, Hardison & Arthurs, and have taken charge of the same.

Montrose, Ill.—H. C. Cooney has purchased a Hardware store in the west end, at Ft. Madison, and will engage in business there.

Mt. Vernon, N. Y.—Heinsohn Bros., Hardware merchants, will move to their new building on South Fourth Avenue about April 1st.

Nelsonville, Ohio.—T. S. Castell has just bought out his partner M. Harbaugh, and is now the sole owner and proprietor of the Hardware store on Locust Street.

New Carlisle, Ohio.—Isaac Ulery is moving his stock of Hardware from the Trostle Building, on Jefferson Street, to his new building, on Main Street.

North Adams, Mich.—Geo. W. Morehouse has sold his Hardware stock to F. W. Payne and S. F. Green.

Onawa, Iowa.—Mr. Hitchen has built an addition to his Hardware store.

Onawa, Iowa.—J. G. Smaltz has about completed a deal for the sale of his Hardware store to George Spring, of Humboldt, Neb.

Plymouth, Ohio.—H. J. Willment has sold out his Hardware business.

Potter, N. Y.—The Hardware store kept by Mr. Botsford has been closed and the stock sold at a great reduction in price.

Richmond, Vt.—Rodney Gloyd has retired from the Edwards & Gloyd Hardware Co., and the business will now be carried on by F. H. Edwards.

St. Cloud, Minn.—The firms of Burgan & Vandersluis and Powell & Wakeman have consolidated under the name of the Powell Hardware Co.

St. Joseph, Mo.—The Wyeth Hardware & Mfg. Co. have commenced work on a four-story addition to their warehouse on Third and Antoine Streets.

Stonington, Conn.—Erastus C. Chesebro has purchased from the estate of the late Joshua Haley the stock in the Hardware store which was run jointly by them. Mr. Chesebro, who has been connected with the firm for so many years, will continue in business, ready to cater to the demands of the public.

Taunton, Mass.—F. R. Washburn is making many changes in the interior arrangement of his store on Main Street that will greatly add to its convenience and adaptability to the Hardware business, especially as regards showing of goods and accommodating patrons.

Trumansburg, N. Y.—Irving Stover and John Marshall have each bought an interest in the firm of Biggs & Co., Hardware.

Varna, Ill.—The firm of Martin & Martin, Hardware merchants, has changed hands. A Lostant man takes their place.

Vernon, N. Y.—The Hardware establishment of Charles Haydon will be remodeled and refitted.

Vinalhaven, Me.—A. L. Pierce is moving his Hardware stock into the store vacated by A. U. Patterson.

Wadena, Minn.—Muzzy & Ryan, the well-known Hardware firm, have agreed to dissolve partnership, to take effect March 1st, Mr. Ryan selling his interest to Mr. Muzzy.

Business Embarrassments.

Butler, Ind.—Julius C. Vernier, a prominent Hardware dealer, has filed a petition in bankruptcy. Liabilities, \$6000.

Eau Claire, Wis.—George C. Huebener, a well-known Hardware dealer, has filed through his attorney, V. W. James, a petition in bankruptcy with Clerk of the United States Court Alfred Harrison.

Findlay, Ohio.—C. C. Clark has been appointed receiver of the firm of Rinehart, Wood & Smith, dealers in Hardware, buggies, agricultural implements, etc., at No. 415 South Main Street.

Mt. Morris, N. Y.—The firm of Baker & Ashton, Hardware dealers in this village, has been declared bankrupt.

Toronto, Ont.—Fred W. Unitt, Hardware merchant, has made an assignment. The liabilities are about \$25,000.

Fires in Hardware Stores.

Charlotte, N. C.—J. H. Weddington & Co.'s Hardware stock has been damaged by fire. Loss, \$2000; fully insured.

Detroit, Mich.—Fire has done considerable damage to the back part of the Hardware store of J. G. Patterson, Nos. 1177-79 Jefferson Avenue. The damaged stock consists of stoves and bicycles.

Evansville, Ind.—Fire has destroyed the Hardware store of F. B. Straub.

Hamilton, Ont.—The F. A. Carpenter & Co.'s retail Hardware store has been destroyed by fire.

Milford, Tex.—The Milford Hardware Co.'s stock has been damaged by fire.

North Bend, Neb.—Wolfe & Kelley's Hardware store has been damaged by fire.

Watertown, S. D.—M. A. Heegaard's Hardware store and stock have been partially destroyed by fire. Loss and damage, \$9000; insurance, \$6000. The origin of the fire is unknown.

Burglaries in Hardware Stores.

Galveston, Tex.—Bryan Hardware Co. \$150.

OUR "TENTH ANNIVERSARY" NUMBER.

APRIL 10, 1900.

In accordance with our annual custom, we shall celebrate the
Tenth Anniversary of the founding of "HARDWARE"
by the publication of the handsomest and most
artistic specimen of a trade journal ever
published in the interest of the
Hardware industry.

THOSE of our readers who may remember the paragon of publications which was issued by us in 1898, followed by that masterpiece of printing on this date in 1899, can form an idea of what is meant when we say it is our intention to duplicate, and, if possible, surpass the high standard of newspaper excellence then and there achieved.

The two previous Anniversary Numbers have each been devoted to a special object—that of 1898 to the interests of the numerous HARDWARE ASSOCIATIONS, to the furthering of whose intelligent aims the greater part of our issue was given, while of our Anniversary Number of 1899 we made a HARDWARE JOBBERS' NUMBER, the issue of that date being largely given to the deserved exploitation of their methods of doing business and the ethics of the trade in this special line of work.

The contents this year will be more varied than in either of these previous issues, and will appeal to our readers and subscribers in a way that will insure a careful consideration being given to every page, whether of general reading or its many attractive advertisements.

To our advertisers we offer an opportunity, rarely met with outside the pages of these Anniversary Numbers of ours, to exploit their choicest lines of goods by the aid of the fine half-tone illustrations now so generally used in catalogue work and so useless for illustration purposes of a high order, except on the superior grade of coated paper used in these special numbers. We challenge comparison for perfect artistic expression, with the superb excellence shown in our treatment of these favors from our advertising patrons.

We have already in hand a number of pages ordered for this issue, and we would urge upon our advertising friends the necessity for an early order for space in this important number, as no advance upon our regular rates is contemplated.

HARDWARE PUBLISHING CO.,
No. 143 Chambers St., - NEW YORK.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, over the country are requested to contribute to this page News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Etc.

Albany, N. Y.—The Gas Tip & Self-Lighter Co., of New York City, has been incorporated, with a capital of \$200,000, to manufacture gas tips and self-lighting adjustments. The directors are: George E. Dickinson, of Irvington; Ralph T. Rokeby and Horace E. Parker, of New York City; Edward W. Fengar, of Newark, and John D. Marston, of Brooklyn.

Baltimore, Md.—The Agricultural Mfg. Co. has been incorporated with a capital stock of \$100,000, for the purpose of carrying on an industrial and chemical business. The incorporators are: Richard L. Duvall, of Chicago, and William Hooper, Oscar F. Clifford, William A. Hart, Jr., and Charles A. Newman, of Baltimore.

Buffalo, N. Y.—The Weyler, Greene & Robinson Cutlery Co. has been incorporated. Manufacturing cutlery. Capital, \$3000. Incorporators: R. Weyler, H. I. Greene, R. H. Robinson, all of Buffalo.

Chicago, Ill.—The Goodman Mfg. Co. has been incorporated. Capital, \$150,000. Manufacturing machinery. Incorporators: Fred I. Kraft, Herbert E. Goodman, Edward T. Wray.

Hanover, Pa.—Superintendent Kinsig, of the Wire Cloth Factory and Superintendent Norrish, of the Burnham Foundry, both at Glen Rock, will build at New Freedom, this county, a mill for manufacturing wire cloth. The promoters have subscribed \$75,000 of the stock and the remaining \$25,000 is taken by New Freedom people. The mill will employ 100 hands.

Jersey City, N. J.—The Standard Chain Co., with \$3,000,000 capital stock with which to engage in the manufacture of iron, steel and other metal chains, have filed articles of incorporation at the County Clerk's office in Hudson County, N. J. The incorporators are: Samuel B. Lawrence, John B. Summerfield, Henry M. Haviland and George E. Spencer, of New York, and James C. Young, of Jersey City.

Jersey City, N. J.—The Salem Nail Co., of New York City, has been incorporated, with a capital of \$50,000. John A. Wilbur, Julia A. Wilbur and George E. Bedell are the incorporators.

Massillon, Ohio.—The Dauntless Burner & Gas Stove Co. has just been incorporated, and is now considering plans for a foundry and shop in this city.

New York, N. Y.—The Russian-American Export & Import Co. has been incorporated to export machinery and tools. Capital, \$7000. Directors: J. Charles Seligman, Israel H. Schloss and Sol Lindenborn, New York City.

Rochester, N. Y.—The new shears company, to be known as the Geneva Shears Co., has been organized with the following directors: D. H. Henry, D. H. Patty, W. G.

Dove, E. J. Cook, H. Merrell, J. R. Maxwell, O. J. C. Rose, H. A. Goble and P. O'Malley. The company is capitalized at \$50,000, of which \$30,000 will be paid in.

Saginaw, Mich.—The Michigan Wheelbarrow & Truck Co., recently organized, with a capital stock of \$25,000, expects to have its plant in operation within ninety days.

St. Louis, Mo.—The John Reiss Stove & Hardware Co. has been incorporated. Manufacturing stoves, Hardware and house-furnishing goods. Capital, \$2000. Incorporators: J. Reiss, H. Steinlage, H. C. Pollman, all of St. Louis.

Stamford, Conn.—A new manufactory has been added to the list of Stamford's industries. The firm will manufacture cutlery and small metal novelties, and already have a number of large orders ahead. The proprietors are Clarence V. Winslow and John E. Devitt, who will conduct the business under the firm name of Winslow & Devitt.

Changes and Improvements.

Albany, N. Y.—Burdick & Son, manufacturers of stove specialties, now located on the northwest corner of Liberty and Division Streets, will erect a new manufacturing plant on the southeast corner of Hamilton and Rose Streets.

Beaver Falls, Pa.—Moffet & Son have begun to build the foundations for two large buildings for the American Axe & Tool Co. One will be 18x45, the other 46x70, the latter being an addition to the grinding department, and when it is completed a large number of new grindstones will be put in operation. The company are also making other improvements. A large steel boiler and a powerful engine have been ordered, in addition to those already in use.

Buffalo, N. Y.—The Depew Mfg. Co. have decided to establish a branch plant in Canada for the manufacture of mowers and other agricultural implements.

Chattanooga, Tenn.—The machinery is being installed in S. T. Dewees' new implement factory at No. 103 Cowart street. The engine and boilers, however, will not be set up before a week. The building, brick work and carpentering are now at an end. The new office, fronting Cowart Street, is finished, painted and fitted up.

Chicopee, Mass.—The J. Stevens Arms & Tool Co. have begun operations in the factory purchased from the Overman Wheel Co., and more men have been put to work there. Others will be added as fast as practicable, and it is expected that the shop will be running with a large force of hands within a short time. The present plan is to use both factories in conjunction, much as the Water shops are used in connection with the Hill shops at the armory in Springfield. The barrel-making, and a large part of the rough work on the other parts will be done in the old building, and the forging, assembling, stocking, etc., will be done in the Hill shops.

Cleveland, Ohio.—The Standard Steel

Range & Mfg. Co. have bought the buildings of the Aurora Vapor Stove Co. The price was \$20,000.

Grand Crossing, Ill.—A three-story brick extension will be added to the plant of the Grand Crossing Tack Co.

Granville, N. Y.—Barden Bros. manufacturers of scythes, axes and agricultural implements generally, are to remove to Wallingford, Vt., where they have leased the old "fork" factory, which has been idle for years. They expect to have fifty men at work by April 1st, and increase that number to 100 later on.

Hammond, Ind.—Ohio capitalists have purchased the Hammond plant of the Lakeside Nail Co. This plant has been idle for four years past. It will be converted into a plant for the manufacture of merchantable iron. The work of reconstructing the mills will be begun at once.

Kansas City, Kan.—The Clark Stove Co. have purchased ground in Wichita, and say they will erect a building for their own use as a wholesale house.

Marine City, Mich.—The Automatic Carpet Sweeper Co., of this place, has outgrown its present quarters, and has bought a new site, where it will erect a bigger factory.

Norwich, Conn.—The addition to the Norwich Cutlery Works is completed and ready for the new machines. The International Silver Co. includes fourteen factories, of which the Norwich cutlery, known as Factory G, is the only cutlery shop. The building, with the additional 75 feet, is now 275 feet long, the main room running the entire length of the building. The office has been moved to the new part and is a large room, handsomely finished in hard wood, with black walnut furnishings. With the new machinery the daily output will be 500 dozen, and will give employment to a number of extra men.

Philadelphia, Pa.—The Newton Machine & Tool Works plant, on Vine Street, east of Twenty-fourth Street, will be greatly enlarged by the erection of a brick and iron addition, two or three stories high.

Worcester, Mass.—The Worcester Machine Screw Co. have increased the capacity of their factory at No. 79 Beacon Street by the addition of a second story to one of their buildings, and putting in a new 125 horsepower Stewart boiler, which has just been connected with the engines.

Recent Embarrassments.

Cambridge, Mass.—Benjamin L. Howes, manufacturer of Hardware novelties, doing business under the name of the Diamond Hardware Co., has filed a bankruptcy petition, with liabilities of \$6485.23.

Miscellaneous.

South Norwalk, Conn.—At the annual meeting of the stockholders of the Norwalk Lock Co. the following directors were elected: E. Hill, J. H. Ferris, W. F. Bishop, F. B. Griffin, A. F. Beard, A. N. Wildman and E. Beard.

We manufacture high quality goods in largest quantities. Have been at it for twenty years.

We supply more of the trade than all other makers combined.
The Hardware Trade is our specialty.

Correspondence Solicited.

NATIONAL SEWING MACHINE CO ,
Factory and Home Office, Belvidere, Illinois.

OF COURSE, YOU TAKE A MAGAZINE,

Probably one in the subjoined list. If it is not, let us know, and we'll put it there. The first column shows the price you would have to pay for the magazine alone. The second column indicates the price at which we will send you "HARDWARE" and the magazine for a year. In many cases you will find the combined price is no more than the single one, and you know you can't afford to do without "HARDWARE." This offer applies to New 1900 Subscribers only.

other styles of
Boxes, requiring a
hinged cover.**CARY MFG. CO.,**
19-21 Roosevelt St.,
NEW YORK.

**SAMPLES
BY MAIL.**

IN our patent loop joint hinge, one part of the loop is made rigid to one-half of the hinge, making the strongest, neatest and best hinge for the purposes mentioned.

Our patent fastening plate and catch which go with the hasp are so perfect in their construction that the catch never gets loose from the plate, as is often the case with others on the market.

When desired, we furnish our hasp and catch with a small hole through each, so that a wire can be inserted and then sealed by use of a lead seal.

IF YOU WANT TO KNOW ASK US

How to file Catalogues, quotations and every class of data, with no more trouble to file than to throw in the waste basket, and as easy to get when wanted as though in your vest pocket.

FOLDING PAPER BOX CO., South Bend, Ind.

"GIVE YOU YOUR MONEY'S WORTH."

Coldwell Lawn Mower Co., Newburgh, N. Y. [*Lawn Mowers*]: We think **HARDWARE** is enterprising, pushing, up-to-date, so to speak, and has a certain amount of get-up-and-go spirit about it, combined with a certain flavor of "I give you your money's worth when you advertise with us," that we like it—not for fun or sentiment, but for real business, and so long as you continue thusly you can count on our continuance.

"WANT TO DIGEST THEM AT HOME."

Simmons Hardware Co., St. Louis, Mo. [*General Hardware*]: Enclosed please find \$2.00, being subscription for two copies of your paper for one year, one of which you will please mail to E. C. Simmons, No. 2727 Olive Street, St. Louis, Mo. The other to A. W. Douglas, No. 2845 Lucas Avenue, St. Louis, Mo. They are for use at the store but we want to digest them at home before we bring them here.

U. M. C.

"Smokeless" Shells.

Nitro Powders.

"U. M. C. No. 3" Primers.

All sportsmen know that the hands and arms, in shooting, become accustomed to the recoil produced by any uniform charge—and that the slightest unexpected variation of load will make a perceptible difference in their marksmanship.

It is because of the absolute uniformity of charge in U. M. C. Factory Loaded Shells—and the close attention paid to every detail of construction that they are so deservedly popular—being used more than any other shells of the same grade in the market.

CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chatillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

has our name as makers plainly on the dial, thus:

and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.

"Bright & Newsy."

Biddle Hardware Co., Philadelphia, Pa. [General Hardware and Bicycles]: In season and out, we have claimed that the Hardware trade was the proper medium for the disposal of bicycles and bicycle sundries throughout the country, and our opinion on this point is so well known, that it does not seem as if we could strengthen it materially by saying it again. Of course large cities may be able to support a few exclusive bicycle men, but in the majority of towns and cities throughout the country the man must have other business in order to make it pay. We appreciate the fact that from the first HARDWARE has held the same views, and we think they have been fully justified by the trend of events. HARDWARE is always welcome in our office, and its bright and newsy columns are often a relief amid the cares of business.

FACTS.

FIRST.—Our cutlery sales in 1899 were largely in excess of any previous year.

SECOND.—We are just completing a new factory building, 100 x 30 feet, four stories, equipped with all modern conveniences. This will give us much needed room, enable us to further increase our output, and assures for our customers more prompt shipments than have been possible for some time past.

THIRD.—The shape and general appearance of our new Silver Plated Steel Handle Knives and Forks are highly spoken of. We are prepared to supply both the Sheffield and 12 dwt. grades, German silver or steel forks, and guarantee them equal in every respect to any on the market, (we think they are better.)

FOURTH.—Since we took the first order for the Radical Departure in table cutlery, which we have designated as our "FOUR HUNDRED" line, we have never once been caught up with our orders. The goods are quite different from any others on the market—handsome, durable, hot-water proof. If you do not know about these goods, better ask for particulars.

FIFTH.—We warrant every thing we sell.

SIXTH.—Our New York Office is at No. 10 Warren Street.

GOODSELL COMPANY, Antrim, N. H.

Proposals.

ENGRAVING AND PRINTING SUPPLIES.

Treasury Department, Bureau of Engraving and Printing, Washington, D. C., February 15, 1900. Sealed Proposals will be received at this office until 2 P. M., Monday April 16, 1900, to furnish during the fiscal year beginning July 1, 1900, the following classes of supplies, viz: Dry Colors, Hardware, Engravers' Supplies, Binders' Supplies, Lumber, and Plumbers' Supplies. Sealed proposals will also be received until 2 P. M., Monday, May 7, 1900, for the following classes of supplies, viz: Textiles, Grocers' Sundries, Rubber Goods, Oils, Chemicals, Paper and Brass and Iron Castings. Awards will be made only to established manufacturers of or dealers in the articles. Blank forms with specifications for proposals and further information desired will be furnished intending bidders on application to
CLAUDE M. JOHNSON,
 Director of Bureau.

We Hold This Refrigerator Up--

As the perfected product of twenty years' experience in manufacturing. We know the Leonard Cleanable will stand every test to prove its superiority. Thousands of satisfied customers will tell you of its merits. You run no risk in buying it, because it is made right. It is made with eight walls to make in-

sulation perfect, and the constant circulation keeps the air pure and cold. Don't be deceived by inferior kinds that may look well—on the outside.

The Leonard Cleanable Refrigerator

Has many special features—talking points—which capture the sales. We are very liberal with electrotypes, circulars, etc. Write to us for catalogues and prices. Secure the agency.

WILL IT PAY

To handle a line of paints? is naturally the question that arises when the subject is brought to the attention of Hardware Dealers. That it pays and pays well—is evidenced by the number of dealers who sell our paints. Some of the best firms find it very profitable to handle our goods, and those contemplating laying in a stock of paints should take advantage of our long experience in this line by consulting us.

HARDWARE

A Westerner has been advertising by circular "how to save half your advertising appropriation." Those who sent him the \$5 required for the valuable information received the reply: "Use only half the usual space."

The Massey Iron Co., Kansas City, Mo., recently organized, desire that catalogues be sent them covering shelf and heavy Hardware, iron and steel, wagon and carriage makers' materials, and supplies and tools and machinery.

At a meeting of the executive committee of the Southern Hardware Jobbers' Association, which was held in New Orleans, on 27th and 28th ult., Old Point Comfort, Va., was selected for the seat of their tenth annual convention, which will take place on the dates of June 13th, 14th and 15th. The Hotel Chamberlain has been designated as official headquarters.

The Lincoln Hardware Co., who have recently succeeded Baldwin Bros. Hardware Co., Lincoln, Neb., will be pleased to receive catalogues and quotations from manufacturers and jobbers. They are retailers of shelf Hardware and sporting goods, and wholesale heavy Hardware.

The Slatington-Bangor Slate Syndicate, of Slatington, Pa., issue an original calendar for the current year, in which a projection of this terrestrial globe is cleverly shown, with the entire possessions of the United States indicated, from Alaska to the Philippines, and including Puerto Rico, of course, by American flags covering the location. The motto accompanying the same is, "Where Old Glory Floats," a unique idea well carried out.

The Hardware store of Davis & Bowlin, Tulsa, I. T., are making arrangements to resume business at an early date, having had their stock recently destroyed by fire, and desire that manufacturers send them catalogues, price-lists, etc., their previous collection having been consumed.

H. N. Purdy, who has represented the Wood's Specialty Co. on the road for some time, has associated himself with George B. Curtiss, No. 96 Chambers Street, New York, where his line will be enlarged by the addition of table cutlery made by A. F. Bannister & Co., Newark, N. J., and the Hardware and tools for which Mr. Curtiss has been agent for years, as well as a full line of grass hooks and grass shears and other seasonable goods.

The Bissell Carpet Sweeper Co., of Grand Rapids, Mich., and New York City, are preparing a very elaborate exhibit of their goods for the Paris Exposition. Their famous Ferris Electric Wheel will constitute one of the most attractive features of their exhibit. The Bissell Co. have secured a very eligible space in the Department of Varied Industries at the Paris Exposition, and will be very ably managed by their French manager.

The conference called for the purpose of forming a National Retail Hardware Association, and which is intended to take place at the Sherman House Chicago, on March 12th, it is believed will be very largely attended by those taking an interest in such proceedings. President Z. T. Miller, of Bloomington, Ill., who has done yeoman service in bringing this movement to its present advanced state, deserves especial credit. As a number of States have as

yet formed no associations among the retail trade, it would seem as though the retailers in those States would regard the present step as premature; but the agitation of its objects by the associated delegates, will doubtless be followed by further State organizations and so give good results in another direction. A cordial invitation to be present has been extended to the dealers in such States, which it is hoped will bring them to the conference in force.

Among the calendars received this year which have escaped notice, a very pretty hanging one was distributed by the Indiana Bent Rung Ladder Co., Indiana, Pa., in which is shown in the center of hanger the Goddess of Liberty standing on top of one of their "Double Columbia" Step Ladders, and a very patriotic figure she presents with red, white and blue surroundings. Illustrations of their single and double extension ladders are also added to the other attractions of the calendar.

We learn from Hamilton, Ohio, that President Meyers, of the Fred. J. Meyers Mfg. Co., upon his return from a recent trip to Chicago, entered suit in the United States Court against a leading department store supply house for \$10,000 damages, on account of their advertising and infringing on the rights of his company in connection with Hunters Sifters. The Fred. J. Meyers Mfg. Co., being the sole owners and manufacturers of the Genuine Hunters Sifters, are determined to protect their rights on these goods and to prosecute all infringers.

J. A. H. Dressel, secretary-treasurer of the Interstate Park Association, states that, in order to prevent any misunderstanding, it is deemed advisable to make known that Interstate Park will be open to the public on and after March 19th, as by that time sufficient progress will have been made to commence shooting. The Brooklyn gun club have secured one or two sets of traps for the first two days, and as there are two other sets of live bird traps, it will give shooters generally a good opportunity to practice until the opening event, the Grand American Handicap, April 2d.

The Miller Lock Co., Philadelphia, have appointed R. B. McKim, No. 118 Pearl Street, Boston, as their Eastern agent, covering New England, New Brunswick and Nova Scotia. The Missouri Valley trade from Kansas City northward, and Texas trade also, will be covered this year by John T. Rowntree, of Denver, Col., and Kansas City, Mo., who will also represent these goods to the Coast and Rocky Mountain trade. The Southern trade will be visited by C. E. Chalfant, who also covers the Central and Canadian States not named above.

The annual meeting of the Hardware Club, of New York, will be held at the club rooms on Saturday, March 17, for the selection of five governors, and the transaction of such other business as may be presented. The governors whose terms will then expire are as follows: Eugene Bissell, Thomas F. Keating, James H. Kennedy, J. Leonard Varick and Richard R. Williams. Mr. Bissell is chairman of the house committee, Mr. Keating is the treasurer of the club, and Mr. Kennedy is the secretary; Mr. Varick is a member of the house committee, and Mr. Williams chairman of the library and art committee.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

Editorial Trade Review.

The trade conditions, which are all-pervading, indicate a most healthy and prosperous state of affairs all over the country. Spring trade is commencing in earnest, and the favorable state of the weather, so conducive to the steady consumption which forms the foundation of successful trade, is everywhere prevailing, and encourages the dealer to increasing effort for an early opening of Spring business in all its fullness, although the condition of the roads in some sections has a tendency to retard business in a limited degree.

The wide-awake dealers are constantly adding some profitable specialty to an already largely increased line, making heavier stocks essential and stock requirements especially attractive.

Sewing machines and typewriters are looked upon by the jobbing fraternity with daily increasing interest. The lessening ratio of general profits resulting from the aggressive competition of department stores and catalogue houses, makes it essential that the usual Hardware stock should be augmented by newly adopted departments, which, when in charge of a competent manager, cannot help but assist the net profits.

While no important concessions are obtainable in the purchases of raw material, manufacturers have an underlying fear of too large an accumulation of supplies, and make their purchases of material with a fair degree of caution, present prices being higher than were in vogue when their already depleted stock was purchased.

The desire to keep stocks at a commendable average seems also to prevail among the jobbers, while scarcely anything savoring of weakness in current quotations is noticeable among the principal transactions governing the usual markets. A conservative feeling prevails throughout all branches of the industry, and while there is no desire apparent to curtail assortments, stocks are no longer ordered in excessive quantities beyond the requirements of a steady and regular demand.

Builders' Hardware is still in good demand, and the indications are that an increased trade in that especial division of the business will be an important feature of Spring requisitions. Between the several advances to which this line of goods has been subjected, good-sized orders have been given at varying quotations, which are now largely completed and will soon seek purchasers among the retailers under the increased business inseparable from Spring demands. Prices, while seem-

ingly high compared with the extremely low quotations, which in 1898 dominated the market, are still low enough by comparison with other years, to create no feeling of possible loss should a good average stock be the one thing desired.

The large demand for haying tools and Spring agricultural requirements will be found of much larger dimensions than for many years, with the exception perhaps of barb wire and a few analogous goods, which, already doubling old prices, have influenced a waiting market for a condition of affairs not necessarily urgent. This same feeling applies to the nail market, which under more limited requirements, is still without the speculative feeling which, a year ago, made purchases possible for the necessities of several months of futures.

The retail dealers, in numbers running into the thousands, in attendance at the various conventions of retailers held during last month, ere this have returned home and will buckle on their armor for all the business they feel they are entitled to, and, being braced up by the consensus of opinion formulated in their several conventions, will soon make their wants known through their orders that have not already anticipated the ordinary specifications of their local trade. This will make happy the jobbers, who have lately been imagining the increase in business simply represented the additional cost of goods. The probability is that in volume and amount the traffic of 1900 will surpass that of 1899 but without the opportunity of phenomenal profits arising, simply from the advanced prices which made many inventories shine with an unusual lustre, even if it were recorded that sales alone could make them productive of the well-earned dividend.

On the Advance.

It needs but a casual review of the proceedings of the several conventions reported in our columns, to realize that the leading retailers in the country are emulating the example of the jobbers who have done so for several years and are doing considerable thinking on their own account. A perusal of the many able papers presented to the consideration of their fellow members, indicates with interest how thoroughly they have thought out the several problems that almost daily come to the front in connection with a business so intricate with details, so filled with important modes of procedure, and frequently involving questions not always to be decided by a momentary survey of an unfamiliar state of affairs.

That the entire industry through natural channels is influenced for good through this dissemination of advanced ideas, goes without saying. That a higher code of morals is fostered and engendered, a nobler plan of action demonstrated and believed in, is as sure to follow as the morning sun succeeds the night of darkness. Every individual member of this earnest body of workers, by this community of general interests, this unselfish devotion to high standards of honor and justice, are encouraged to look for higher thoughts and accomplish greater achievements.

Our Anniversary Number, April 10th.

In calling attention to the announcement on another page of this issue referring to our "Anniversary" number of *Hardware*, we would especially request our

advertising patrons who have already been liberal in sending us so many orders for space, and also those manufacturers and jobbers who design falling into line for that superb number of our paper, that an early preparation of copy and cuts be entertained so we may receive them during the succeeding two weeks. The mechanical preparation of the advertising pages of this special issue, printed as it is on the finest coated paper, involves a greater amount of careful and constant application to necessary details than is required in any of the ordinary issues of our paper. We ask our advertisers' assistance to this extent, that we may receive the copy and electrotypes needed for the proper display of their advertising matter, at a date as early as they can possibly give it their attention, in order that the superior excellence justly claimed for this masterpiece of printing, will continue to be our greatest pride and prove worthy of our patrons' conscientious approval.

New Members of the Hardware Club.

At the meeting on March 1st of the board of governors of the Hardware Club, of New York, the following gentlemen were unanimously elected to membership in the Club:

Abner C. Thomas, County Court House.
Emerson P. Harris, 150 Nassau Street.
F. E. Lally, 490 Cherry Street.
Myron B. Damon, Fitchburg, Mass.
D'Arcy O'Connor, World Building.
H. W. Bookstaver, 256 Broadway.
Eugene H. Conklin, 34 Spruce Street.
S. W. Baker, 253 Broadway.
Theo. M. Brown, 121 Duane Street.
W. S. Wood, 34 Spruce Street.

New England Iron & Hardware Association.

The annual dinner of the New England Iron & Hardware Association will be held in Boston, March 20. The following invited guests of the Association will probably be present and make speeches: Henry M. Whitney, president of the New England Gas & Coke Company; Rev. Edward A. Horton; Robert A. Boit, president of Boston Associated Board of Trade; Charles E. Adams, president Massachusetts Board of Trade; John Bindley, president National Hardware Association; T. James Fernley, secretary-treasurer National Hardware Association; Rear Admiral Sampson, Lieut. Bennett, U. S. N., and William N. Hart, Mayor of Boston. From present indications the dinner will prove as entertaining and enjoyable as those which have preceded it, the recollections of which linger in the memory.

New England Hardware Dealers' Association.

The monthly meeting of the New England Hardware Dealers' Association will be held at the United States Hotel, on Wednesday, March 14th. Dinner will be served at 5:15 P. M. The business meeting will take place immediately after the dinner. The principal guest will be Mr. Charles Clark Adams, of Sargent & Co., New Haven, Conn. Mr. Adams will endeavor to entertain the Association with reminiscences of his travels at home and abroad.

The subject of discussion will be "The Advance in Prices and Its Effect on the Hardware Trade." It is stated that, owing to the early adjournment of the last meeting, several members who had been invited to express their views on the above subject were not called upon. They are expected to be heard from at this meeting.

The entertainment committee is composed of the following gentlemen: Austin H. Decatur, Boston; E. M. Richardson, Waltham; Hiram W. Colton, Boston.

Good Star Spangled Banner Doctrine.

"The Man in the Corner" has this to say in his latest brochure:

We hear a great deal now-a-days of the way in which civilization is to be advanced through the wars in the Philippines and South Africa; of the obligation to carry the gospel of peace and good will into these benighted lands, even though it be on the points of bayonets, and of proving the doctrine that all men are created free and equal by demonstrating the contrary to be the case. Perhaps the action is necessary and it may be that the benefits to the world at large and these peoples in particular will justify the means taken to secure them, but there is little of logic in a blow, and a resort to force is always to be deprecated. "Strain is drain," says theologian King, and violence always entails waste.

Besides, peace has brighter laurels than those of war, and America's truest and best conquests are not those of fire and sword. Her greatest victory lies in the universal acknowledgment of her commercial supremacy in the world's markets, and it carries with it no long death roll, no great tax and no national burden of debt. The day is at hand, if it has not already dawned, when the palm is awarded her. The tone of the comment in the foreign trade papers that reach me has changed from a protest against the recognition of American competition to expressions of satisfaction when the manufacturers of other countries are at all able to withstand it, and instances where the Yankees have been defeated are singled out and recounted as triumphs. It is the field against America, with America in the lead. American locomotives run on Continental railroads; American cutlery is sold over Sheffield's counters; American bridges span streams in all lands, and her breadstuffs, textiles, vehicles, Hardware and machinery are sold the world over.

The McIntosh-Huntington Co.'s Catalogue.

The McIntosh-Huntington Co., Cleveland, Ohio, have recently issued what they call a "Condensed Handy Twentieth Century Catalogue," and it certainly deserves the name. It is designed to fully illustrate the large line of Hardware and other goods carried by them at their extensive establishment. The catalogue is of convenient size, 9x11 inches, bound in serviceable cloth covers and contains 1032 pages exclusive of the telegraphic code and index, which cover 36 pages, the index being carefully constructed so that under several headings the article desired may be conveniently found by a single reference. The telegraphic code is a complete and valuable one, and in its use will be found extremely serviceable for prompt orders. The paper used in this catalogue is open to criticism, as being too light for daily reference in the usual every day handling in a Hardware store. As no manufacturers it is claimed have been assessed in order to have their goods properly shown in its pages, it would look as though the expense was not to be of annual occurrence, in which case it would have been wise to have increased the weight of the paper used, in order to provide a longer life for so much hard work. The almost unlimited number of small cuts used in its compilation makes this a very handy catalogue for constant reference; the descriptions and text are also condensed, allowing an abundance of illustrations connected with special lines, which makes the catalogue more than ordinarily attractive. The stock of goods represented in the pages of this finely compiled catalogue covers a large and important assortment of such goods as the up-to-date jobber is compelled to carry in large stock, including Hardware, cutlery, bicycles, manufacturers' and tinners' tools and supplies, gas pipe and fittings, mixed paints, telephones and accessories, etc.

The greatest marble quarry is in Vermont.

LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law,
No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 143 Chambers Street, New York City.

QUESTION.—I hold a lease for ten years from May 1, 1896, of the upper floors of a building. The lower part of the building is occupied by the landlord. For the past year or more the landlord has allowed the part of the building occupied by him to fall into disrepair, and it has become so dilapidated that the drains have become stopped up and broken, and in consequence they emit sewer gases and such unpleasant and unhealthful odors that my store is unfit to work in. I have repeatedly asked the landlord to make the necessary repairs to his part of the building but he refuses to do anything. I am afraid to stay longer in the building on account of my health, but I cannot afford to pay rent on the premises which I cannot occupy. What should I do?

REPLY.—We are of the opinion that the circumstances you describe would justify you in leaving the premises and breaking your lease, as these facts amount, in our opinion, to a constructive eviction. The landlord could not compel you to pay rent under this lease after you had left his premises upon the grounds stated.

QUESTION.—I hold a note endorsed by three individuals which falls due in the early part of next month. The note was given as payment for some goods which I sent to one of these individuals. Are not these three endorsers equally liable with the maker for the payment of the note?

REPLY.—The maker of the note is primarily liable and the endorsers secondarily liable for the payment of the note. If, when the note falls due it is not paid, you should immediately notify each endorser of the non-payment by the maker and that you look to him for payment. An endorser so notified may be held liable upon the note.

QUESTION.—Kindly give me some information upon the following question: Two years ago my father took out an insurance policy on his life for the benefit of my mother and sister equally. My sister married and died without making any will, leaving no children but leaving her husband surviving her. On the death of my father who would get my sister's interest in the policy.

REPLY.—As a general rule the interest of a named beneficiary of an insurance policy is vested and cannot be defeated by any act of the insured. That is to say, once a person names another as his beneficiary in his insurance policy he cannot change the policy (generally speaking) without the consent of the first-named beneficiary. If, however, the beneficiary die before the insured the insured may sometimes have the right to name another beneficiary. If the insured made no change in the policy the interest of your sister would, under the laws of New York State, go to her husband.

QUESTION.—Some time ago I and two friends of mine entered a well-known gambling resort in this city to have a friendly game of cards together. We became interested in the game, but in a couple of hours, when we decided to stop playing, I found that I had lost about a hundred dollars and that both my friends had lost an equal amount, to the keeper of the establishment. We believed that the game had not been played fairly, and on stating this to the proprietor he became very angry and ordered us to leave his place, which we accordingly did. What I wish to know is, can I obtain any satisfaction from the keeper of this resort without parading the affair before the public.

REPLY.—There is a statute in this State under which you and your friends could recover your money lost as above described. This statute provides, however, that the action to recover money so lost must be brought within three calendar months from the time the money was paid to the winner. In all probability the money could be recovered without any notoriety. It has been held that a claim of this nature is assignable, and you could, therefore, assign your claim to some other person in whose name a settlement could probably be effected.

The American Machinery & Trading Co.

The American Machinery & Trading Co. have established a main office in the Bowling Green Building, New York City, with branch offices in the largest cities in the United States, also in all foreign countries, with a large corps of traveling salesmen and correspondents, buyers of machinery, Hardware, etc., throughout the world.

They solicit exclusive agencies and special prices from manufacturers of all kinds of machinery in this country, with a view to handling same to the best advantage on account of the unequalled facilities that they have for placing orders.

Mill owners, contractors and purchasing agents of power and electric light plants, and any one requiring machinery of any character whatever, would find it to their interest to correspond with this company, on account of trade arrangements, by which they are in a position to quote the lowest market prices on the highest grade of machinery manufactured.

Michigan Retail Hardware Dealers' Association.

A special meeting of the executive and the investigating committee of the Michigan Hardware association was held recently at the Hotel Cadillac, Detroit. President H. W. Weber, of West Bay City, Vice-President S. L. Boyce, of Port Huron, Secretary-Treasurer Fred H. Cozzens, of Detroit, George A. Wilcox, of Adrian, A. K. Edwards, of Kalamazoo, J. B. Sperry, of Port Huron, G. W. Hubbard, of Flint, J. Stahl, of Lansing, G. W. Bruske, of East Saginaw, and George B. M. Towner, of Muskegon, were present.

The question of whether the Michigan association wanted to take part in the National Convention of Retail Hardwaremen, to be held in Chicago, March 12, was discussed, and it was decided to send a delegation composed of H. C. Weber, of Detroit, Vice-President Boyce, Secretary Cozzens, President Weber, and C. F. Bock, of Battle Creek, to represent Michigan dealers.

It was decided to hold the annual convention of the association in Detroit, at Hotel Cadillac, on July 11. It was also decided that there should be no subscription taken up for the entertainment of the convention, which will be composed of about 250 delegates, but that the association should pay all the expenses. A committee on programme, as well as a committee on revision of the constitution and bylaws, will be appointed by the president.

After the meeting the committees, with D. C. Delamater and Charles T. Fletcher, were entertained at supper at the Griswold house by Secretary Cozzens. In the evening the party went to Harmonie hall to witness the masque carnival of the Harmonie society.

More Pay For Tube Workers.

Four thousand employes of the National Tube Co., at McKeesport, Penn., were recently notified of a 10 per cent. advance in wages. The increase includes all day laborers in the tube mills. The tonnage men will get their advance at a later date, when the rate is fixed by the Amalgamated Association.

This is the second increase of 10 per cent. that the day men of the National Tube Co. have received within six months, and makes the wages of common labor higher than at any time in the history of the works. The advance will date from April 1. The increase includes all pipe cutters, machinists laborers, and all employed in the tube mills who work by the day.

Subsequently the announcement was made that the increase in wages would affect not only the employes of the National Tube Works, at McKeesport, but that all the tube workers employed by the combine in the United States would receive a similar advance. The number of men affected is over 20,000.

Export Notes.

The Springfield Machine Tool Co., Springfield, Ohio, have finished a large number of tools which they will send to the Paris Exposition.

John A. Roebling's Sons Co., Trenton, N. J., recently shipped to the Paris Exposition a perfect model in wire of the Brooklyn Bridge. The miniature even shows the trolley tracks and cars, and every cable and every wire that is used in the big bridge is found in the model. The bridge, with the approaches, is 28 feet. When set up at Paris tiny trolley cars will be run on the bridge. The piers are made of wire rope. These ropes are so various in size that the mere piling of reels serves to make the piers' proportions. Over 1,500 bolts were used in the construction.

A typical American machine shop, rigged with all modern appliances and in actual operation, is to be one of the special side features of the Paris Exposition. A number of exhibitors of iron and wood-working machinery will put their machines at work in a building erected for that purpose. The Berlin Iron Bridge Co. have charge of the structural work, and some of the material is reported as on the way. The idea is creditable to American machine builders, and the plant will, no doubt, be an eye-opener to thousands of visitors to the Exposition, and it will do a great work in popularizing American methods.

The French consul at Batavia, Java, in a report which has just reached the Treasury Bureau of Statistics, suggests that the Dutch East Indies offer an especially fertile field for those desiring to make sales of agricultural machinery and implements, which at present, he says, are of an extremely primitive character in those islands. Most of the implements used in small farming come from Germany and England, and are in many particulars unsatisfactory; the handles of the sickles are not properly fastened to the blade, while agricultural machinery, properly so-called, including machinery for planting, reaping, binding and threshing are practically unknown. Even sugar cane plantations have as yet made little progress in the adoption of modern machinery. The difficulties which have been encountered in attempts to introduce agricultural machinery are: First, the cheapness of manual labor; second, the climatic conditions under which the articles of iron and steel grow rusty and unfit for use in a short time if exposed to the open air, and, third, the fact that the white ant destroys nearly all kinds of wood except teak, which is, therefore, necessarily used in the construction of machinery for use in the island.

The exhibition of British and American agricultural machinery now under way at Odessa, Moscow and Kiev, should make Russia better acquainted with our better labor-saving inventions for farm use. The Russian factories producing agricultural machinery and implements, chiefly grouped about the coal fields of south-central Russia, though long protected by almost prohibitory tariffs, have not been able to meet the demand. A petition from the agriculturists a little over a year ago induced the government to place harvesters, mowers, steam ploughs, threshing machines and many other farm appliances on the free list until the close of 1903. Now or never is the time to get a foothold for our farm machinery in a vast country whose development is mainly agricultural. The German manufacturers, according to the Odessa newspapers, are doing all they can to retain their present supremacy in the Russian market, and intend to exhibit their own goods at the same time. About one-half of all the farm machinery now imported into Russia comes from Germany and the United States; England and Austria-Hungary supply the balance, about a fourth of this total coming from this country. We send to Russia raw cotton worth twenty-four

times the value of the machinery we sell to her farmers, and there is no reason why our agricultural implements should not, with proper push, become an important part of our trade with that country.

In a recent interview with P. Ten Horn, who arrived here recently from Veendam, Holland, he stated, among other facts, that Holland is well known as a great agricultural section of Europe, and his object in coming on to this country was to study the various methods of manufacturing agricultural implements, intending to even go so far as to visit large farms and learn how we so successfully cultivate the soil. He states that Holland is too small for manufacturing. "It doesn't pay us to manufacture over there, as we can buy all kinds of machinery cheaper than we can make it. The firm I represent manufactures a few steam engines, but on a very limited scale, as we find we cannot compete with America, England or Germany. We can import agricultural machinery from America to our country at about 15 per cent. above the invoice price. Much depends on how great an amount of space such goods take up in a steamship. Our people have a very high opinion of the United States, and it is learning every year to sell more and more of your goods. We really like to sell the goods manufactured here for the principal reason that the manufacturers' products of the United States sell better than those of England and Germany because their factories make a specialty of a certain kind of machinery, and make it better and cheaper than do the other countries where they try to make a variety of articles in the same factory."

Compressed Cork and its Uses.

Cork, as everyone knows, says the *Scientific American*, is one of the best non-conductors of heat or sound. That it has not been more widely used in building is due chiefly to the difficulty of obtaining it in an unadulterated form. A product called cork tiling has recently been placed upon the market which is made of what is known to the trade as "virgin cork," ground, compressed, and otherwise treated by a patented process, and which is free from the cement and glue usually employed to hold the particles together. We are informed that tiles made of this pure, compressed cork form an admirable flooring, which, besides being noiseless, water-proof, warm, and germ-proof, is capable of withstanding hard usage. By varying the degree of compression and modifying the manufacturing process slightly, sheets of cork different in color and density are obtained, which, when sawed and finished in the form of panes, can be used for wainscoting alone, or in connection with cork-tile floors. Cork compressed into sheets and sawed to the size and thickness desired constitutes a very efficient pulley covering. It is said that a pulley covered or lagged with compressed cork will transmit from 50 to 60 per cent. more power with the same tension of belt than one having only a smooth iron surface.

The National Enameling & Stamping Co. are making rapid progress with their new plant at Granite City, Ill., which is speedily approaching completion. The work will include a main hot mill building, 700 x 120 feet, containing sixteen 36-inch squaring shears, four 54-inch squaring shears, four roll lathes and two 20-ton Morgan traveling cranes, the latter driven by electricity. The annealing department, 577 x 71 feet, will contain the cold rolls, ten double annealing furnaces, equipped with Freeman's charging machines, two 20-ton electric cranes and four latest improved Mesta pickling machines. This will greatly add to their present large facilities for production, which of late have been taxed to the utmost.

The greatest flour mill is in Minneapolis.

SEWING MACHINES AND THE HARDWARE TRADE.

There has been increasing enquiry regarding the advantages of handling sewing machines in the Hardware industry. The facilities for intelligent distribution afforded by the Hardware jobber have never before been so thoroughly understood by the trade at large.

Through the discussion by correspondents of *Hardware* as to the many advantages of so doing, backed up by the exploiting of the fact that several Western jobbers already command an outlet running into many carloads annually, has caused attention to be drawn to this profitable specialty, which can be handled so easily without interfering with the sale of more legitimate goods, and definite information is daily demanded from manufacturers catering especially to this trade for patronage.

The National Sewing Machine Co., of Belvidere, Ill., an illustration of whose extensive plant will be found herewith, have for a number of years distributed their entire

the companies whose reputation has been almost entirely built up by their aid.

To give an idea of what it means to hold the standard of excellence in even this single line worthy of a Hardwareman's attention, we present a few statistics regarding their plant:

Acres of ground covered	10.25
" " floor space	8.50
Aggregate horse-power employed	1,500
Feet of railroad sidings	1,080
" " line shaftings	5,415
Private gas plant capacity, cubic feet per day. ...	180,000
Dynamios and motors in use	17
Automatic machines in use	132
Semi-automatic machines in use	134
Milling machines in use	139
Drilling " "	113
Grinding and polishing machines in use	168
Molding machines in use	21
Special machines in use	165
Miscellaneous machines in use	153
Presses	41

It cannot be otherwise than interesting to know that to produce 1000 machines a day requires the making and use

NATIONAL SEWING MACHINES CO.'S WORKS, BELVIDERE, ILL.

product largely through the Hardware trade; they have probably been the most aggressive pioneers in advancing sewing machine interests, through such auspices. They have given their attention to making reputable goods, which once sold in a community, would bring additional enquiries from others desiring a good, and not the cheapest, article.

Not competing with mechanical weakness in any way, they have been able to adopt every valuable improvement, and extend the guarantee, with the result of obtaining the confidence and good will of their patrons to an extent never before deemed possible. Its result is shown in the immense manufacturing plant covering over ten acres of ground and furnishing employment to nearly two thousand employes, whose product averages 1000 complete sewing machines a day. There are very few machines of their make that at the present time find customers except through the efforts of the Hardware trade. This will convey to even an ordinary mind the growing importance of a new department that can reach such imposing dimensions.

The several lines of their product embrace sewing machines for household or family uses and are made in the usual grades necessary to impress home buyers; the heavy machines needed for factory purposes being left to

of 468,000 separate pieces that enter into the construction of that number of machines, as each average machine contains 468 distinct parts. Its wonderful growth and great expansion under possibilities indicated by the above statistics should incline every progressive jobber to give the subject more than a passing attention.

Boston & Lockport Block Co.

A meeting of the stockholders of the Boston & Lockport Block Co. was recently held at the office of the company at Lockport, N. Y., when the following directors were elected for one year:

Hon. A. D. Bosson, Boston, Mass.
 Frank Gebbie, St. Johnsville, N. Y.
 M. H. Tarbox, Boston, Mass.
 Mrs. Adelaide C. Beverly, Lockport, N. Y.

A meeting of the directors was subsequently held, and the following officers were elected for the ensuing year:

President—Albert D. Bosson.
 Vice-President—Frank Gebbie.
 Secretary and Treasurer—Myron H. Tarbox.
 Assistant Secretary—Alfred B. Tarbox.

Executive Committee—Messrs. A. D. Bosson, Frank Gebbie, M. H. Tarbox.

OUR "TENTH ANNIVERSARY" NUMBER.

APRIL 10, 1900.

In accordance with our annual custom, we shall celebrate the
Tenth Anniversary of the founding of "HARDWARE"
by the publication of the handsomest and most
artistic specimen of a trade journal ever
published in the interest of the
Hardware industry.

THOSE of our readers who may remember the paragon of publications which was issued by us in 1898, followed by that masterpiece of printing on this date in 1899, can form an idea of what is meant when we say it is our intention to duplicate, and, if possible, surpass the high standard of newspaper excellence then and there achieved.

The two previous Anniversary Numbers have each been devoted to a special object—that of 1898 to the interests of the numerous **HARDWARE ASSOCIATIONS**, to the furthering of whose intelligent aims the greater part of our issue was given, while of our Anniversary Number of 1899 we made a **HARDWARE JOBBERS' NUMBER**, the issue of that date being largely given to the deserved exploitation of their methods of doing business and the ethics of the trade in this special line of work.

The contents this year will be more varied than in either of these previous issues, and will appeal to our readers and subscribers in a way that will insure a careful consideration being given to every page, whether of general reading or its many attractive advertisements.

To our advertisers we offer an opportunity, rarely met with outside the pages of these Anniversary Numbers of ours, to exploit their choicest lines of goods by the aid of the fine half-tone illustrations now so generally used in catalogue work and so useless for illustration purposes of a high order, except on the superior grade of coated paper used in these special numbers. We challenge comparison for perfect artistic expression, with the superb excellence shown in our treatment of these favors from our advertising patrons.

We have already in hand a number of pages ordered for this issue, and we would urge upon our advertising friends the necessity for an early order for space in this important number, as no advance upon our regular rates is contemplated.

HARDWARE PUBLISHING CO.,
No. 143 Chambers St., - NEW YORK.

NORTH DAKOTA RETAIL HARDWARE ASSN.

The third annual meeting of the North Dakota Retail Hardware Association was held in the city of Fargo on Wednesday and Thursday, February 21st and 22d, and it was certainly the most enthusiastic and successful meeting yet held by the Association, which now numbers in its membership nearly all of the regular Hardware dealers of the State.

The convention was called to order by Vice-President H. B. Allen, of Jamestown, owing to the enforced absence of President Clark W. Kelley, of Devil's Lake, who was too ill to attend the meeting. Mr. Allen thanked the members for the large attendance at the opening session and introduced Mayor Johnson, who very pleasantly welcomed the members of the Association to the city of Fargo. A huge tin key, which the mayor assured the members was manufactured by Hubert Harrington, a prominent local dealer, was then turned over to the Association, Mayor Johnson assuring the members that it would fit every lock in the city, from the police station to the churches.

In responding to the welcome of Mayor Johnson, Vice-President Allen took occasion to congratulate the citizens of Fargo on account of the rapid and steady growth of the leading city of the State and the metropolis of the Northwest, assuring them that the State at large took as much pride in the growth of the city as did those who resided within the corporate limits of the city.

Thomas McCracken, of Minneapolis, secretary of the Northwestern Retail Hardware Association, sent the following telegram to Secretary Barnes, which was read:

"Minnesota sends you this greeting; the glad hand of fellowship. Shake, for united action; for fidelity to our Association principles; for good cheer among you and for an enjoyable meeting."

On motion a recess was taken to give the vice-president an opportunity to appoint the several committees. The appointments were as follows:

Press—H. F. Strehlow, Casselton; C. L. Richmond, Minne-
waukon; O. E. Lofthus, Hillsboro.

Transportation—H. Harrington, Fargo; S. A. Wroolie,
Milton; O. Ellestad, Grand Forks.

Nominations—H. N. Joy, Hamilton; W. Westergaard,
Valley City; I. L. Newgaard, Grafton; E. C. McIntosh,
Bottineau; W. A. Fox, Ardoch.

Resolutions—G. H. Wolbert, Casselton; S. D. Bostwick,
Bathgate; W. S. Thompson, Bowesmont.

The absence of President Kelley precluded a report from the head of the Association, but the following letter from him was read:

To the members of the North Dakota Retail Hardware Dealers Association:

As the time for our annual meeting approaches, I feel that my attendance is a duty which I owe to the Association and myself, and I fully intended being with you at this time, but under the circumstances my absence is necessitated by the condition of my health. I have enjoyed the work as president of our organization and appreciate the honor you have bestowed upon me. Since being president, the time I could devote to the cause has been more limited than I wished. Still I endeavored to work for the advancement of our best interests. The report of our secretary will give you all the details of our last year's work, so that it will be unnecessary for me to take that up at this time. I feel that we have progressed, and that the coming year will show a much greater advancement in our cause. The States all over the Union are organizing, and in another year they will be ready for a national organization of retail Hardware dealers, and when that has been accomplished, we will be very near the end for which we have

been working. Although I am now ineligible to membership and cannot identify myself with you directly, my interest in the Association will be as strong as it has been in the past, and I shall watch with great pleasure your continued growth and prosperity.

Respectfully yours,

CLARK W. KELLEY.

THE SECRETARY'S REPORT.

Secretary Barnes, of Grand Forks, then presented his annual report, which embraced in its contents much that would have been contained in the report of the president. It was a carefully prepared report, and contained much detailed information, showing the steady growth of the North Dakota Association. The report was as follows:

I am permitted for the third time to submit to you an outline of the work performed in your secretary's office during the past year, and on account of the illness of President Kelley detaining him from this meeting, will enter into more detail in this report than I otherwise would.

The last year has been one to most of us entirely new in its trade conditions, and one where many perplexing problems have been presented, but I trust it has been one that may be remembered as both pleasant and profitable.

The secretary gave an exhaustive resume of his labors in connection with the correspondence entailed upon his honorable position, epitomized in the following:

VOLUME OF CORRESPONDENCE.

The foregoing circular letter correspondence which I prepared on mimeograph, with exception of one, comprises all of that class of my correspondence during the preceding twelve months. In addition to that, that you can better understand the extent the mail has been used by me in endeavoring to keep in close touch with you and to give other matters in our work the required attention, I will, as in my former reports, submit to you a few figures showing the correspondence handled through this office. Since our last meeting I have written (as my letter press copies will show) 1075 letters and employed a stenographer for 165 in addition to these. I have written fifteen circular letters as previously described, each averaging 150 copies. I have received, not including circulars, probably 1200 to 1500 letters, estimating as closely as possible 5000 pieces of mail that I have handled in this office. The amount of postage has been \$64.16. This volume of correspondence and expenditure of postage may appear to many entirely unnecessary, and I will admit that it is far in excess of what I anticipated when I accepted this office twelve months ago. The cost of postage had never entered my mind when matters in this work requiring attention were brought to my notice.

MEMBERSHIP.

Much of the circular letter correspondence has been directed toward the increasing of our membership, which feature of our work has required a great deal of labor ever since our organization two and one-half years ago. It has been the aim of your officers to enroll as members as many as possible of the 185 Hardware dealers that are within the State.

Our growth was most rapid during the first year, and the second year we gained new members. This year we have added twenty-six to our membership. Our membership a year ago was 106; to-day we have 112 members in good standing. From our organization during the past year we have lost fifteen by discontinuing the Hardware business. Four we have dropped by their request. Six, I am sorry to report, we have dropped on account of the financial support they neglected giving us. The six we have dropped for this cause have totally ignored my entire correspondence and permitted drafts which we made on them to be returned, attaching thirty-five cents expense to each, without a word of explanation.

* * * *

SHALL OUR ASSOCIATION BE EXCLUSIVE HARDWARE?

Since our organization two and a half years ago we have had opportunities to see where we could make changes

that would prove our work more beneficial to the Hardware dealer, and, on the other hand, had opportunities to see where we may have enacted rules in the start that have since proved detrimental. With this condition in mind I would recommend that during the session the members discuss the advisability of admitting all general stores in our State that are selling Hardware in connection with other lines on a profitable basis or to exclude them. We have in the past admitted as members general store dealers who were carrying Hardware when in towns where no exclusive Hardware dealers were located. This has opened a large field for dissatisfaction from many sources, and it should be settled now while we are together as to whether we are an association of exclusive dealers or otherwise.

* * * * *

THE BANKRUPTCY LAW.

Many hardships and much injustice is done the merchants of our country to-day by the present Bankruptcy law, and I would be much pleased to see the organized commercial bodies throughout the United States bind together in a strong appeal to their various representatives in Washington for either the entire repeal of the existing law or such modification of it that the protection and benefits are not entirely on the side of the debtor. With this result in view, would it not be well during this meeting to have proper resolutions framed for transmission to our representatives and urge their support?

NATIONAL ASSOCIATION.

During the past few weeks most of us have learned of the agitation toward the formation of a National Association of Retail Hardware Dealers, and of the proposed meeting in Chicago, March 12th, of representatives from the various organized States.

This matter will be brought up for discussion during our meeting, and it is very important that you give it careful thought, and be free in expressing your views before this convention.

TRADE PAPERS.

But few probably think of or appreciate the assistance given our work by the trade papers. They are ever ready to carry to our members through their columns any missions we may wish to convey. It is through their efforts to a great extent that our work has been so progressive. To these papers we are justly indebted.

* * * * *

The secretary went into detail on the subject of
MUTUAL FIRE INSURANCE,
and regarded with favor the Mutual Fire Insurance Co., of Minnesota, whose efforts to secure thoroughly reliable mutual fire insurance at a cost very much less than present board rates, are well deserving of the support of this convention.

TRADE CHANGES.

As we enter another year we find throughout our State some changes among the Hardware trade, and a few among our members. To the new dealer just entering the field we extend our right hand of fellowship, and welcome in our ranks. Where business changes have occurred and some of our members left to enter other fields of labor we dislike to lose them from our Association, but extend to them our best wishes.

PRESIDENT KELLEY'S RETIREMENT.

It is with much regret that I am compelled to mention the retirement of President Kelley from active business. We all know that he has earned a long-deserved rest from business cares, but in his case we are selfish, and wish that he might have remained in our Association longer. In him our Association is losing a steadfast friend, and one who has always been anxious for the advancement of our work. From the very first agitation of a Hardware association in North Dakota he has ever been, as you all know, an active supporter and an untiring worker. Since our organization many difficult matters in connection with our work have been presented to him for his adjustment, and with the same skill and energy that he has handled and succeeded in his own business, so has he guided us successfully through these stages. In his retirement he can feel satisfied that he has left us landed on safe ground for our future advancement.

To Mr. Kelley our Association is much indebted, and I am sure I speak for our entire membership in extending to him their heartfelt thanks for the very valuable service he has rendered our Association since its organization.

To him and the other officers and members of the Association I desire to extend my most sincere thanks for the encouragement and assistance given me during the year in the discharge of my duties. Thanking you for your kind attention, I submit to you this report for your consideration.

The report of Treasurer Joy, of Hamilton, was then read and the two were accepted and placed on file:

Following the reports of officials, short addresses were made by the representatives of the jobbing houses who were present in goodly numbers. They one and all showed a hearty disposition to work in harmony with the Association and to do all they could in their power to advance the interests of the Association.

Treasurer Joy spoke in favor of changing the present plan of electing a full board of directors of nine members each year. He favored having three members hold over so that the board would not start in at the beginning of each year unfamiliar with the work which they were expected to do. The matter was referred to the committee on resolutions.

On motion the meeting went into executive session for the remainder of the afternoon. The Question Box was used and matters of interest to the dealers of the State were discussed behind closed doors. An adjournment was then taken until Thursday, February 22d.

THURSDAY MORNING SESSION.

The attendance at the second day's session of the convention was somewhat larger, owing to the fact that the implement men had finished their labors and were ready to turn their attention to the older organization. Vice-President Allen called the meeting to order, and the first matter taken up was a call for the report of the nominating committee. Mr. Joy suggested that it would probably be better to hear from the committee on resolutions, owing to the fact that a change was to be made in the by-laws regarding the election of an executive committee. This was referred to the resolutions committee and it was decided to hear that report first. The report being read, changes were made so that the section when thus amended, read as follows:

ARTICLE III.
OFFICERS.

Section 1. The officers of this Association shall be president, vice-president, secretary and treasurer, and six members, who, with the president, vice-president and secretary, shall constitute an executive committee.

Amend section 2 of article 3, by striking out the words "executive committee," occurring in the first and second lines, and by adding the following to the section, making it read as follows:

Section 2. The president and vice-president shall be elected annually by ballot, and shall hold office until their successors have been elected and qualify.

At this meeting the six members of the executive committee shall be elected, two for a term of three years, two for a term of two years and two for a term of one year and at subsequent annual meetings two shall be elected for a term of three years and to fill vacancies; all to be elected by ballot.

The report of the committee was adopted.

The nominating committee made the following report for the permanent officers:

President, H. T. Helgesen, Milton; vice president, H. Harrington, Fargo. Executive committee: three years, H. F. Strahlow, Casselton; I. L. Newgaard, Grafton; two years, H. B. Allen, Jamestown; H. A. Moe, Churchs Ferry; one year, M. G. Evenson, Sheldon; W. H. Pinkerton, Lakota; the president, vice-president and secretary, *ex-officio*. Delegates to the National Retail Hardware Association, at Chicago, the president and secretary.

H. N. Joy, of Hamilton, then presented an excellent paper on

"SOME WRONGS WHICH NEED RIGHTING,"
prefacing the body of his argument with the following:

GREAT AND SMALL WRONGS.

We have our great wrongs and our small wrongs. The former have been and are too painfully apparent to demand any attention from me at this time, and it is not my province to deal with them in this paper.

The thought occurred to me, however, that it might be well to have brought before our notice some of the smaller wrongs which it seems to me we have to contend with; and which, like the little worm that attacks the ship's timber, and soon causes the loss of the vessel, or the pin-hole in the bottom of the kettle, which slowly but effectually drains its contents, just so surely eats into and consumes that which goes to make up the balance on the right side of the ledger.

His paper was a very interesting one, and was listened to with close attention.

Owing to the illness of H. S. Diesem, of Lamoure, his paper on "The Effect of Department Stores on the Hardware Trade," was not read. His place on the programme was taken by A. C. Hatch, of Battle Lake, Minn., who talked on the subject of "The Retail Hardware Dealers' Mutual Fire Insurance Company." He gave a history of the organization and mode of procedure by which the assessments for insurance are made, and also the regulations governing the organization. The company is organized under the laws of Minnesota, and is purely a Northwestern committee, which expects to carry the larger part of the Hardware insurance in the Northwestern States. The maximum risk taken by the company is \$3000, and the minimum, \$500.

From an excellent article entitled "Some Observations About Expansion," presented by G. H. Wolbert, of Casselton, we take the following:

STANDING BY THE ORGANIZATION.

When they send you a list of things to do and not to do, why don't you follow these lists? It is a well known fact that all the members do not follow these lists. When this is known and advertised it acts as a damper on the work of the committee. They feel that you do not appreciate their efforts.

These matters take a great deal of time and the pay to the president and secretary are mere pittance for the value of the services performed.

Organization is what we have, but not yet thorough. You should be like soldiers in battle; take orders given you and execute them to the best of your ability. If each one does his share in the battle then victory is assured.

Should some shirk their duty and look for the nearest road home, then they act like deserters, and possibly traitors. We find all through life that there are numerous men who want to get through this world easily. Always ready to join anything, and if it is a success—they did it; if it is a failure—they told you so. They are the people who always can do it right, but when given something to accomplish they are too busy with other matters. Their tongue is their principal organ of action. Pope wrote: "For fools rush in where angels fear to tread."

It takes brains, not talk, to work successes in this world. Not one in ten of our members have any idea of the work done for you and this association by President Kelley and Secretary Barnes. And it is brain work, not talk. All the grievances are not real. Some are only dreams. Ask these gentlemen how often they receive complaints which are hardly worth consideration.

* * * *

THE JOBBERS.

Now as to your friends the jobbers or any one selling you goods. The jobbers will always try to be your friends. From the conditions of your business they must be friendly to be successful. They need you equally to your need for them—unless you select them as your bankers. If you do this then buy goods right and pay them all you have agreed, both in price and interest. Don't try any small talk, but follow business rules. You are then making for yourself lasting friendships.

"HE WHO WOULD HAVE FRIENDS MUST SHOW HIMSELF FRIENDLY."

Jobbers and salesmen are mortals, and some will do exactly as customers often do to you—tell the truth when necessary and stretch it awfully when they think it will not break. I have men on my list now who years ago

stretched the truth to me, and I cannot believe them since that time. You can paint a black sheep white, but it is still a black sheep. The man who is honest to himself must be honest with others. We believe our trade and business is as good as any and better than some, hence this association, which I believe will always be a success. But united we stand, divided we fall.

Whenever the salesman offers you goods for

FUTURE DELIVERY AT GUARANTEED PRICES,

buy them if you will need them. It is for your benefit to do so. The salesmen have these prices and terms for special reasons and you cannot afford to miss them, when you personally know that the man and the house he represents are reliable. By so doing you place yourself on a basis of competition with other dealers. Very frequently low retail prices are made in this way when, had you used the same business judgment as your competitor, you could have bought as cheap.

DON'T LIE

about business matters and prices. Recollect that no one is so badly hurt in wrong doing as the person who commits the act. You will surely be caught at it, and then you have branded yourself. Can you afford it?

* * * *

W. H. Pinkerton, of Lakota, being unable to be present to read the paper he prepared on "The Country Retailers' Superior Advantages in Trade," it was read by H. A. Moe, of Churchs Ferry. Among other good things he said:

We must have a

THOROUGH KNOWLEDGE OF THE BUSINESS,

so that in buying or selling we will have an intelligent idea of the quality, prices and uses of the goods we sell. How many times in our experience we have seen customers in our stores who had a much better knowledge of the quality or uses of an article on sale than the clerk or even the proprietor who was making the sale. It is a great advantage to keep the same clerks, where that is possible, for only in this way can we have a force about us who understand the details of the business thoroughly, and particularly that they may be familiar with our personal methods of conducting business.

* * * *

A COMPLETE STOCK ESSENTIAL.

The last requirement which I will mention is one on which there will be no difference of opinion, and that is, we must carry a complete stock of goods required in our varied locations. It was only a few days ago that a gentleman from a point some distance from my town remarked in my store that the gentleman who had the exclusive Hardware store in his town did not carry a complete stock. This very Hardwareman is a member of this Association, and this is one reason I mention it. His customer said that out of six small articles called for he could probably only find about three in stock. He made the prophecy that it would be only a short time till some progressive individual would open a first-class Hardware store in that place and our brother's small business would be still further depleted. I can conceive it altogether possible that this unprogressive member might even go so far as to come to our Association, asking that we formulate some rule whereby we would attempt to prevent the entrance of a second store in a town of that size. In such a case the unprogressive man must take the blame home to himself, and in the end he will very likely fail, under the law of the survival of the fittest.

* * * *

EXTENDING CREDIT.

Another advantage I wish to name is that we can extend credit to our customers. With most of us a very large per cent. of our business goes on to our books for at least a few days and a great deal for weeks and months.

This is a powerful lever when used with good judgment and discretion. It so often happens that just at the time that the goods are wanted the money is not in hand. I have even heard men say that they did not care for cash trade because there was more profit on credit sales.

HELPING A CUSTOMER.

We have another advantage in that our customers do not always fully understand the best way to use an article or all the different purposes for which it can be used. Having it before them, we can explain all its purposes and best methods of using the same.

At another time a customer comes to our store asking advice as to the best thing to buy for a certain purpose.

Never fail to give such a man the benefit of your very best judgment, and fully explain your reasons for advocating a certain article. I have known men to take advantage of such an occasion to palm off an article of dead stock on such a customer, thus taking advantage of his ignorance, and at the same time forfeiting your right to his confidence. Better were it to sell said piece of dead stock for half price to some one who would take it with no recommendation from you or consign it to the trash pile if needs be.

* * * *

Now, if we conduct our business in this way, we have no right to blame some one of more push and perseverance, one who carries a complete line and shows it to advantage in an attractive place of business and on every occasion that presents itself, one who pushes his business until the volume grows to such proportions that he can buy many things in car lots and other quantities at the lowest market price—we have no right, I say, to blame them for our lack of success and seek the Association for some form of redress. We must shoulder the blame ourselves and correct our methods, infuse new life into our business and then will we be on the road to success.

* * * *

H. Harrington, of Fargo, at this juncture, stated to the convention that Mrs. Benedict and Mrs. Sloan wished to address the convention in regard to the new proposed Orphans' Home for Fargo. The ladies presented the matter very convincingly, and Mr. Wolbert, of Casselton, commended the laudable efforts of the ladies. Mr. Harrington moved that each member make himself a committee of one to aid the home in their home town. The motion was carried, and Mr. Harrington and Mr. Strehlow were appointed as a committee to take up a collection then and there. The Hardware merchants were liberal, and the donations amounted to \$43, which was turned over to the ladies. Mr. Wolbert was appointed a committee of one to send out subscription lists to each member of the Association in the State and ask them to do what they could in aid of the institution.

H. F. Strehlow, of Casselton, then read a paper he had prepared on the fertile subject "Competition," which was delivered in the easy, off-hand manner so characteristic of the author. It was full of good things, and was listened to with interest.

A motion was made and carried enthusiastically, calling for a rising vote of thanks to the gentlemen for the able papers presented and read. The question of the place for holding the 1901 convention was next taken up and Secretary Barnes extended an invitation to the Association to meet in Grand Forks. A motion to that effect was carried unanimously, and the fourth annual convention will be held in that city on the third Wednesday in February, 1901.

Mr. Strehlow made a motion to offer a vote of thanks to the traveling men for their efforts towards the Association. The matter was discussed at some length, and Mr. Ayr, of Bismarck, moved that the traveling men be made honorary members of the Association. Mr. Joy thought that this matter should be referred to the executive committee to be disposed of at the meeting held during the executive session in the afternoon. Mr. Ayr withdrew his motion. The motion for a vote of thanks was carried unanimously.

AFTERNOON SESSION.

An executive session was held during the afternoon, at which time the question box was again used, and matters of a private nature were discussed.

After the meeting of the executive committee a report was made that the committee had elected C. N. Barnes secretary, and H. N. Joy, treasurer. Both are re-elections. The gentlemen have served the Association well and faithfully, and their re-election met with the heartiest approval of every member present.

The resolutions committee reported the following resolutions, which were adopted:

Resolved, That it is the wish of the Hardware Dealers

that the hearty thanks of this convention be extended to the railroads of the State for the very generous reduction in rates to this convention. It is also

Resolved, To extend to the trade papers our thanks for their energetic and untiring support in the past. It is our belief that our great success is due to their help, and we should always see that we lend them every support possible.

We wish to extend to the citizens of Fargo, the business men and hotels our appreciation for our entertainment while here, and also to Mayor Johnson for the use of the beautiful and useful key he so generously presented to us.

We feel that we are not capable of framing a resolution expressing our appreciation of the past officers for their never-tiring and energetic work for the Association and wish to extend our special thanks to President Kelley, Secretary Barnes and Treasurer Joy and the members of the executive committee.

Resolved, That we extend a vote of thanks to the traveling fraternity for their untiring efforts to entertain and instruct the members of the Association, privately and in open session.

Resolved, That we thank the members for the very instructive papers prepared for the meeting and suggest that steps be taken to have the same printed.

Towards the close of the session the following self-explanatory communication was received from the "stove men:"

To the North Dakota Retail Hardware Dealers' Association, in convention assembled:

We, the undersigned stove salesmen, greatly appreciate the very warm and cordial reception we have received at your hands, and can heartily say that we have greatly enjoyed our visit with you, but:

Owing to the extreme amount of our expense accounts, after due deliberation and without consultation with our respective managements, have concluded that it will be absolutely necessary to advance prices at once—5 per cent., and possibly 10 per cent.

The latter amount we will, however, leave open until we can see you at supper time.

Respectfully submitted,

C. H. Cook, with Cribben & Sexton Co.; C. E. Healey, Kahn Bros; G. L. Nye, Minnesota Stove Co.; M. L. Weinberg, Peninsular Stove Co.; Leigh Pruden, Favorite Stove Co.; John Hatfield, Duffy, Trowbridge & Co.; John Straher, Rathbone, Sard & Co.; Eclipse Stove Co.; John Bonnett, Bonnett & Nance; E. S. Ferguson, Minnesota Stove Co., and all others in attendance, but outside of the Combination.

This was evidently intended as a joke or bluff, but the Association decided to take it seriously, and sent them the following reply:

C. H. Cook and others.

Gentlemen:

Your communication received, and we are extremely sorry that you find it necessary to advance prices, but we are glad to know that you are liberal enough to divide the profits of this advance with us, by spending a portion of it in the banquet to which we understand you invite us this evening, and which we hereby accept.

Yours respectfully,

C. N. BARNES, Secretary.

After adjournment the Association marched in a body to the Hotel Waldorf, and reported themselves ready for the banquet. This was something they had not expected, but they soon made up their minds that they had been a little too gay, and as their bluff was called, the best thing they could do was to make the best of a bad deal and the four course banquet they set up was all that could be expected. But the next time the "stove men" will be more careful how they try to bluff the country dealers.

◆

Pictures are merely adjuncts to the ad, often necessary, sometimes superfluous. Their purpose is to attract attention and to illustrate the text. When they dominate the ad they weaken it. Illustrations are like the good looks and good clothes of a salesman—a valuable help, but far from the real selling power. Nothing looks worse to me than a great big cut with a stingy little mortise left for the life of the ad—the argument.—*Advertising Experience*.

MISSOURI STOVE AND HARDWARE ASSN.

The second annual convention of the Missouri Retail Stove and Hardware Dealers' Association was held at the Lindell Hotel, St. Louis, on Tuesday, Wednesday and Thursday, February 20, 21 and 22. Tuesday morning was devoted to a session of the executive committee, which was concluded at 12 M. The Tuesday afternoon session was called to order at 2:15 by President J. W. Poland, of Carrollton, who, after expressing his personal gratification to see so many of the dealers of Missouri before him, proceeded to read his official report, the substance of which we give herewith:

PRESIDENT'S REPORT.

Gentlemen: It is not necessary for me to review the history of this organization, as it is fresh in the minds of all.

The great object of our Association is to cultivate more fraternity and co-operation among ourselves. When we act upon the theory that our competitors are as honest as we are, and have the same purposes as ourselves, we shall have learned a valuable lesson.

In the social world there are certain great principles that are regarded as fundamental to the best interests of mankind, and the penalty attached to the violation of these principles is the loss of the respect of the best people.

So in the business world we should endeavor to cultivate such feelings of fraternity as will put into practice these great principles. In the cultivation of these principles we must learn that so long as we expect right motives and right dealing from our neighbors, we must not overlook the fact that our neighbors have a right to expect the same from us.

To accomplish this end we are convinced that there is a growing feeling among the trade that this is a better plan by which to correct evils than to attempt to legislate them out of existence. We have a grand opportunity before us in bettering our own condition as retail Hardware dealers, and being a blessing to the business world as well. I would that I had the ability to enthuse every retail Hardware dealer in the great State of Missouri with the importance of this work as I myself feel it, and I sincerely hope that the day may soon come when all the dealers of the State may be members of this Association.

This was followed by the presentation of the secretary's report, which detailed the various labors connected with his position, and gave the convention a very good idea of the work attached to it. Among other things he said:

In presenting this, my first annual report, I wish to take the opportunity of thanking the Association for the honor conferred upon me at the last meeting in selecting me as secretary of this Association.

MEMBERSHIP INCREASED FIFTY PER CENT.

Our Association has increased its membership from 64, at our last meeting at St. Louis, April 11, 1899, to 96 at the present time, which is a satisfactory showing when we take into consideration the fact that our last meeting at St. Louis was the beginning of the organization proper.

HOW TO GET STATE LIST OF RETAILERS.

The work of your secretary has not been very arduous outside of the work of sending out circular letters to about 650 of the retail Hardware dealers of the State. To do this he had to secure a list of retail dealers, which was an exceedingly difficult matter; especially to get a correct list. To enable your secretary to get such a list I would recommend that each member of your executive committee send a full list of the dealers in his district to the secretary, when he can enter the same in alphabetical order in a book for that purpose. By this means every dealer in the State can be reached directly on short notice.

TRAVELERS AS CANVASSERS FOR MEMBERSHIP.

The suggestion adopted of enlisting the traveling men

in our cause is a good one, but the action was taken too late to bear good fruit, as it was very difficult for your secretary to get the proper addresses, and the number of said traveling salesmen who were representing the different firms suggested, in time for effective work, in lieu of which your secretary, with each circular letter, sent a blank application for membership. I would respectfully recommend that only such traveling salesmen as belong to this Association be authorized to solicit members, and I am confident it will work for the good of the Association, in that they being a part of it will take more interest in the success of the Association. With our present membership the interest will be renewed, and we are now in position to push the organization with more vigor.

In reply to a letter of invitation extended to President John Bindley, of the National Hardware Association, the secretary received the following letter:

PITTSBURGH, January 16, 1900.

Your courteous favor of the 10th inst. is to hand, with an invitation to address your association at its second annual meeting in St. Louis, February 20th.

Unfortunately my engagements are of such a nature that I find it will be impossible to be with you upon this pleasant occasion. The aims and objects of the National Hardware Association are almost identical with your own Association. It means the uplifting and the bettering of the conditions of trade, striving to attain a higher understanding of the true ethics of doing business between competitors. The commingling each with the other cannot but be helpful, as well as bring about a better understanding between the individuals. May you continue in your good work, with ever-increasing beneficial results, until you attain the high position you are striving for.

With best wishes, and regrets that I cannot be with you upon this occasion, I remain, Yours truly,

JOHN BINDLEY, President.

An invitation was also extended to T. James Fernley, secretary of the National Hardware Association, desiring him to address this convention on the best method of organizing State Associations, and the secretary received the following characteristic reply:

PHILADELPHIA, January 13, 1900.

I am in receipt of your valued favor of the 10th, extending an invitation to attend the second annual meeting of your Association in the city of St. Louis, on February 20th, and to make an address before your Association on "The Best Methods of Organizing State Associations," but regret that my engagements at that particular time are of such a nature that it will be impossible for me to accept your very courteous invitation.

The objects to be attained by such organizations as yours and our own are to all intents and purposes identical. We are all striving to attain a higher standard of business methods. Results can be accomplished by organized efforts which would simply be impossible through individual action. This will be written in history as an era of organization. The advantages to be attained by an organization like yours are as manifold as they are manifest. I don't know that I could be of much advantage to you were I to address you on the subject of "Best Methods of Organizing State Associations," as I have never had any experience in that particular direction.

My impression, however, is that those who are cognizant of the advantages of an Association like your own should be appealed to through literature circulated from your secretary's office, and this should be followed up by personal visitation by some one authorized to solicit membership for you.

If the traveling salesmen of your State are interested in the aims and objects of your organization, they can do a great deal toward aiding your officers in securing a satisfactory membership.

I do not know what proportion of the retail dealers in your State are now members of your organization, but I assume that already as an organization you are strong

enough to have your influence felt wherever exerted. This being the case, you undoubtedly will be able to make considerable progress and thereby be in a position to demonstrate to those who have shown a disinclination to connect themselves with you that they are doing an injustice, not only to those of their competitors who are willing to devote the time and assume the financial responsibility necessary to obtain beneficial results from associated effort, but that they will realize that they are doing themselves an injustice to remain in a position where they are unable to obtain such advantages as would accrue only to such concerns that are members of your Association. In movements of this nature we find two classes of men who remain outside of an organization. 1, Those who are chronic pessimists, and who do not believe that conditions can ever change; and 2, those who are penurious enough to endeavor to obtain advantages without contributing their share toward the expense.

There is an immense field of usefulness open for associations like your own. The trade of the legitimate retail dealer is having serious inroads made into it by the catalogue houses and department stores, and we have been doing our utmost during the past two or three years to minimize this evil.

We bespeak for your Association every measure of success possible, and sincerely hope that all the retail dealers eligible for membership in the same will avail themselves of the opportunities you offer. This is an era of organization, as I have stated before.

If the writer were privileged to address you personally he could not say more than is here indited. You have a powerful force to combat, and need all the assistance possible to be rendered; and I think that you will find no more willing ally than the National Hardware Association of the United States. Yours truly, T. JAMES FERNLEY,
Secretary-Treasurer.

The secretary followed this up with his report as treasurer (occupying as he does the dual position of secretary-treasurer) in which the amount of cash on hand was stated to be \$302. The report was adopted.

The president announced as the next order of business the election of officers for the ensuing year. L. D. Groom, of Richland, moved that the chair be empowered to appoint a committee of three to nominate officers for the Association. The motion was carried, and the chair appointed M. C. Post, of Brookfield; F. A. Kansteiner, of St. Louis, and J. B. Best, of Palmyra.

On motion, the president appointed as a committee on credentials W. F. Halyard, of Joplin; A. H. Gruendler, of St. Louis, and William Sodemann, of Concordia.

J. C. Koenig then stated the executive committee would recommend that a committee of three be appointed to revise the constitution and by-laws on the lines laid out by the executive committee. A motion was made to that effect, which was carried, and the president appointed Taylor Frier, of Louisiana; L. D. Groom, of Richland, and E. A. Demeter, of Macon, as such committee.

On motion, a committee of three on rules and order of business was appointed. The chair appointed Ben Morris, of Memphis; J. F. Bannon, of St. Louis, and C. E. Bodine, of Shelbyna.

The minutes of the last annual meeting, as well as the minutes of the executive committee meeting held since, at Moberly, November 15, 1899, were then read by the secretary.

B. F. Naylor, of Marshall, read a short paper on "Why Should Retail Dealers Belong to an Association?" which he answered especially in the paragraph we quote:

As individuals, we cannot bring about needed reforms; our efforts fall at our feet. We petition, we protest in vain. Then our only recourse and remedy is in united effort. When this is accomplished, when we stand shoulder to shoulder as one mighty force, then our right to a place in the commercial world will not be questioned, but revered and respected not only by manufacturers and jobbers, but by the catalogue house and department store as well. We must maintain our identity through organization, or go down in ruin and defeat. Which shall it be? The answer lies within your own reach and grasp. Our Association, whose object and aim is the promotion of

every interest of its members offers you the remedy. Will you apply it?

Following the reading of Mr. Naylor's paper, the president asked the committee on nomination if they were ready to report. The committee named as their choice J. W. Poland, Carrollton, for president and P. E. Harney, of Joplin, for vice-president. After a slight discussion, and the positive refusal on the part of Mr. Poland to accept a re-election, the matter was referred back to the committee who subsequently reported the nomination of P. E. Harney, of Joplin, for president and B. F. Naylor, of Marshall, for vice-president, and the gentlemen were unanimously elected. Mr. Harney then took the chair and the secretary read the report of the committee on rules and order of business, consisting of a programme for each session. On motion the report was adopted as read.

According to the programme, the next order of business was a paper by Clark W. Kelley, of Devil's Lake, N. D., president of the North Dakota Association, but Mr. Kelley was unable to be present on account of illness, which prevented the preparation of the paper called for.

The committee on revision of the constitution and by-laws then made a report. A number of changes were adopted after discussion, the following Articles being the result of the conference.

Section 1, Article III of the constitution to read as follows:

The officers of this Association shall be president, vice-president, secretary and treasurer, and four members, no two of whom shall be chosen from the same Congressional district, who, with the president, shall constitute an executive committee. There shall be selected annually five members, known as an advisory committee, whose duty shall be to advise with the president and executive committee concerning the interests of this Association and its members.

Section 2, Article III, to read as follows:

The president, vice-president and advisory committee shall be elected annually by ballot, and shall hold office until their successors have been elected and qualified. The executive committee shall be elected alternately by ballot, two for one year and two for two years.

Section 1, Article IV, to read:

The regular meetings of the Association shall be held annually at such place as may be designated by the Association at its previous annual meeting, and at such time as recommended by the executive committee.

Section 2, Article IV, to read as follows:

The executive committee is subject to the call of the president, and when so called their actual expenses shall be borne by the Association.

Article 1 of the by-laws to read as follows:

The membership fee shall be \$3, and the annual dues \$3 for each year thereafter.

Article VI of the by-laws to be abolished. This article prohibits the use of wines or liquors at banquets of the Association.

A discussion then resulted on "What effect has the advance in prices had on the retail trade?" in which quite a number of the delegates participated, the general opinion being that more goods were sold in 1899 than had ever been sold before, and little or no trouble was noted about getting good prices. It was decided that higher prices are apt to stimulate men to do more business.

The convention adjourned to meet at 10 o'clock on the following morning. A number of members were provided by the entertainment committee of the St. Louis Retail Stove and Hardware Dealers Association with tickets for a theatrical entertainment in the evening. Those who attended were highly entertained and experienced thorough enjoyment.

WEDNESDAY MORNING SESSION.

The convention was called to order by President Harney at 10:30. The minutes of the previous session were read by the secretary.

The committee on credentials reported, and a number of names were added to the list of membership.

The committee on nominations reported the following for members of the executive committee: J. W. Poland, Carrollton, one year; W. T. Shoop, Richmond, one year; R. L. Hixon, Hannibal, two years; F. A. Kansteiner, St. Louis, two years. For members of the advisory board: M. C. Post, Brookfield; F. Neudorff, St. Joseph; Taylor Frier, Louisiana; G. A. Pauly, J. C. Koenig, St. Louis. On motion the report was received, and the gentlemen named duly elected.

The secretary next read the report of the auditing committee to the effect that they had examined all the records of the secretary-treasurer, and found the same correct and recommended that they be approved. This was accordingly done.

E. M. Bush, of Evansville, Ind., who was called upon for some remarks, made a short address to the convention, in which he referred to his own Association, and made the following statements, which proved of interest:

We organized less than a year ago, and we had our second meeting last week. We had in attendance about seventy-five persons. We anticipated many more, and probably would have had two or three times that number but for the fact that the Indianapolis papers got out the report that smallpox was prevalent in the State, and I received many letters from those intending to go asking about the facts. I tried to set the matter right, but somehow it got out through the State that there was smallpox in Evansville, and the consequence was that we had no larger an attendance. But we had a very enthusiastic meeting indeed, and I think every one went away feeling repaid for having come.

* * * *

In my city we have eight retail Hardware dealers, and I know that I had not been in the stores of two or three of my competitors two or three times until this meeting came about. I went in—they were not members of the Association—going in to solicit them to become members. I found them to be very nice sort of fellows, and before this meeting was over every Hardwareman, with one exception, in the city, became members of the Association, and one of the gentlemen made the suggestion that we found that the other fellow was not such a rascal as we thought he was, and that we might get together and have some understanding about the staple goods we had been selling, as for instance, wire on a profit of 5 cents per 100, and nails pretty near in the same fix. There had been nothing of the kind done, but this meeting brought us together in such a way that I think we can get together and have an understanding upon some few goods.

One thing that I tried to impress upon the members, too, was that they should take a trade paper of some kind. We found that a good many of our members were not taking them. Quite a number have been brought into our Association by seeing reports of these associations. Perhaps you gentlemen in Missouri are more advanced in this regard than we are in Indiana.

* * * *

The secretary read a letter from J. W. Emery, Quincy, Ill., regretting his inability to be present in order to deliver the paper assigned to him on the programme. The contents of the Question Box were then brought before the convention, and the usual discussion on the various subjects connected therewith followed, after which the Association adjourned until 2 P. M.

WEDNESDAY AFTERNOON SESSION.

The president made the statement that the next item on the regular order of business would be a report from the executive committee. But as that body was not ready to report, he would ask the vice-president of the National Hardware Association, R. W. Shapleigh, to discuss the subject: "Relations Between Manufacturers, Jobbers and the Trade," but upon learning Mr. Shapleigh was ill and not able to be present, this was given up. The president then asked John F. Bannon, of St. Louis, to address the convention on the subject of "Some Things to be Avoided by the Association," which was done in an extremely interesting manner, holding the attention of the convention, and we give below a few of the points that Mr. Bannon

made prominent in the course of his remarks, the excellence of which was admitted by his hearers.

I think the first thing to be avoided should be, not to allow anything to enter into our Association whereby its peace or harmony might be disturbed or broken; as that is the foundation and success of every successful organization or institution. We can see only too plainly the results when not avoided.

Second, We should avoid misrepresenting the purpose of our organization and its aims.

Third, We should avoid egotism, allowing others to praise our works.

Fourth, We should avoid passing ridiculous resolutions.

Fifth, We should, as far as possible, avoid the mistakes of other organizations, which have proven detrimental to their usefulness.

Sixth, We should avoid giving offense to those whom we expect to assist our organization.

Seventh, We should be very careful to avoid any attempt to restrict any man's business on broad lines.

Eighth, We should avoid any attempt to injure any manufacturer or business by withdrawing patronage, or even threatening to do so, or in other words; do not boycott.

Ninth, We should avoid contact with those who would seek to disorganize, or destroy our usefulness, as an organization.

Tenth, We should endeavor to avoid anything that does not tend to cement the manufacturer, jobber and dealers' interests more closely than ever before.

Eleventh, We should avoid disposition on our part, no matter how promising it might appear, to dictate a policy for others to operate their business.

Twelfth, We should avoid trying to do too much, thereby making a dismal failure of our organization and its noble and glorious purpose, which we assembled less than one year ago to effect.

Thirteenth, Be careful to avoid adopting rules and arbitrary methods, for such methods in anything will eventually prove a failure.

Fourteenth, We should, as far as possible, avoid accumulation of unsalable and unkempt stock, thereby becoming our own and most dangerous enemy, by imagining it is some one else's methods that are destroying our usefulness and trade.

Fifteenth, We should be more than careful to avoid any and all worthless discussions on topics that neither we ourselves nor any one else could in any manner change.

Sixteenth and last, but not least of all, we should certainly use our best endeavors to avoid turning aside the strong grasp of fellowship and good will that has, and is, being extended to aid us on all sides. As a loving mother would assist her child to walk, so our friends are assisting and aiding us, for we are yet but an infant, helpless and dependent.

Following Mr. Bannon, F. P. Haus, of St. Louis, was called on. He made a few remarks, and was followed by several others in a general discussion connected with the Question Box contents. This was followed by short addresses being made by a number of manufacturers who were present, the tenor of the remarks being that they were in full sympathy with the objects of the Association, and expressed a universal desire to co-operate with it in every possible way. The executive committee then made the following report:

REPORT OF EXECUTIVE COMMITTEE.

The executive committee would recommend that the Association empower a committee to select a button to be emblematic of the Association, to be worn by its members; also that the Association select three delegates to the national conference to be held in Chicago, March 12th, for the purpose of effecting a national organization; also, the committee have entered into a contract with H. L. Palmer to publish a hand book of our Association, and we recommend that the president and secretary be empowered to sign such a contract; also, the committee under the powers given by the constitution have selected as secretary and treasurer for the ensuing year E. Thomas, of Trenton, Mo.; also, the committee have adopted the following as the form of application for membership to the Association:

To the Officers and Members of the Missouri Retail Stove and Hardware Dealers' Association: I respectfully represent that I am engaged in either the occupation of

retail dealer in stoves or Hardware, or as salesman of such; that I am in full accord with the objects of your Association, and most respectfully ask that I may be enrolled as a member. Recommended by _____ retail dealer.

On motion, the report of the executive committee was adopted. J. W. Poland, of Carrollton; F. A. Kansteiner, St. Louis, and Taylor Frier, of Louisiana, were nominated and elected as delegates to attend a meeting in Chicago for the purpose of effecting a national organization. John F. Bannon, of St. Louis; L. D. Groom, of Richland, and J. B. Best, of Palmyra, were appointed a grievance committee. The convention then adjourned until Thursday morning.

THE BANQUET.

Under the management of the St. Louis Retail Stove and Hardware Dealers' Association, a banquet was given to the members of the Missouri Retail Stove and Hardware Dealers' Association at the St. Nicholas Hotel, in which nearly 200 dealers assembled in the banquet hall, the tables being beautifully ornamented with the usual and appropriate display of flowers, a boutonniere being provided for each guest. The tables were arranged in the form of a three-pronged fork. A fine orchestra supplied music of an instrumental character, and the Olympia Quartette at intervals gave choice vocal selections from their repertoire. An excellent menu was provided, and the members expressed their gratification to the fullest extent. After coffee had been served, President F. A. Kansteiner on behalf of the local Association, welcomed the visitors, and hoped they would come again next year. President P. E. Harney, of Joplin, responded in behalf of his Association, and then Mr. Brinkmeier, of St. Louis, as toastmaster, called on a number of the gentlemen present for addresses. The toasts were entirely impromptu; in fact, the proceedings of the banquet were informal.

The addresses delivered were as interesting as they were brief, and were listened to with more than the usual attention under the circumstances.

THURSDAY MORNING SESSION.

The president called the convention to order at 10 o'clock. W. F. Halyard, of Joplin, opened the proceedings by reading a paper on "How I Advertise," which was brief and to the point. A discussion followed on the same subject, in which several of the delegates gave their views. J. M. Kenyon, of Maitland, read a paper on "Co-operative Insurance," a subject which at the present time is attracting considerable attention in all the Hardware conventions. He went into an exhaustive resume of the advantages of the good features connected with this system of insurance, which received from the members present the attention that such an important subject commands. He was followed by several other members on the same subject, making the discussion assume more than the usual interest. A motion was made by Mr. Wright, who said: "I think it would be a good idea for this convention to appoint a committee of three on the feasibility of this plan of mutual insurance, and report at the next meeting of this convention. These insurance companies will see that we mean business, and are going to organize for our own protection in the way of fire losses." The motion was seconded and carried, the president later appointing as a committee Louis Hering, of Blackburn; F. S. Bolte, of St. Louis, and J. M. Kenyon, of Maitland.

Mr. Frier reported the executive committee had agreed upon a button, and the secretary was authorized to purchase 100 of the design that had been accepted. The president appointed as alternates at Chicago to attend the Chicago conference for the formation of a National Association, A. H. Gruendler, of St. Louis; E. Thomas, of Trenton, and Louis Hering, of Blackburn.

Kansas City was selected as the next city for the annual convention. The following resolutions were adopted:

Recognizing the fact that the best of life is made up of pleasant memories and hopes for a better future, therefore be it

Resolved, That a vote of thanks be tendered to the retail Hardware and Stove dealers of the city of St. Louis for the royal manner in which they have entertained us, with the assistance of the jobbers and manufacturers of the city; to the management of the Lindell Hotel, for the use of this room; also to the trade press, for the manner in which they have assisted and in publishing the reports of our meetings.

THURSDAY AFTERNOON SESSION.

At the Thursday afternoon session, a paper on the subject of "Do We Advance Most Rapidly by Individual Effort or by Convening to Legislate?" was read by Geo. R. Plowman, of St. Louis, who supported his argument in the manner indicated by the following extracts:

I don't believe in harmony and unity. As a general thing it is stagnation. For the sake of harmony often means too much trouble—let it go. Progressiveness is real battle to the survival of the fittest and honor to the victor, but only justifiable when conducted in a humane and unselfish manner.

* * * *

But individually we have made wonderful strides. The business man and mechanic and laboring man does not give his last efforts and thoughts.

By which I mean his best thoughts and efforts. When the convention as a whole is finished, he leaves it to some one else. If he did no better individually than he does collectively, he would surely be a failure in whatever he undertook in the struggle for existence.

The following resolutions were unanimously adopted:

Resolved, That the secretary notify the Kansas City Hardware dealers of our action in convention to day, and urge upon them the forming of a local Hardware Association, so that by the time our next convention is held they will be of material assistance to our Association. Be it

Resolved, That we empower all traveling men who are members of and in good standing in this Association to solicit membership for this Association and to receive 50 cents for each member proposed, providing the membership fee accompanies the application.

Resolved, That the executive committee be empowered to appoint such committees as may hereafter become necessary during the interim between this and our next meeting.

Resolved, That the thanks of this convention be extended to J. Harry Dickbrader and Mr. Hyatt for their faithful services as assistant secretaries during this convention.

A resolution was offered by Geo. R. Plowman returning thanks for the assistance and attendance of the country members, which was unanimously adopted. The convention then adjourned to meet at Kansas City in 1901.

Sharpens Horseshoes.

An observing individual has discovered that the blacksmith's hand engine, with its rotating flexible shaft, can be utilized in the smithy for other purposes than clipping horses, and has patented his idea. He is Henry F. Smith of Helena, Mont., and his scheme is to utilize the horse clipper or a similar device, for a horseshoe calk sharpener dispensing with the usual rasp and file. An abrading disk is secured to the outer end of the spindle, and then rotated by the shaft and pressed against the projecting portion of a horseshoe, known as the calk. It rapidly cuts the iron away, it being usual to keep the calk sharpened, especially in winter time, to assist the horse in keeping his feet on icy pavements.—*Exchange*.

Advertising is a business; it is a study; it is hard work. It cannot be learned in a day. Its fullest results cannot be realized from a single trial. Systematic methods must be adopted, and the lesson of advertising taken up day in and day out before benefits are derived. Study and work—and be patient—and eventually advertising will bring its reward.—*Ad Sense*.

ILLINOIS RETAIL HARDWARE ASSOCIATION.

The second annual convention of the Illinois Retail Hardware Association was held in Peoria on Tuesday and Wednesday, February 27th and 28th. A large number of manufacturers, jobbers and others interested in the Hardware trade attended the opening session on Tuesday afternoon, at which the Chicago dealers were present in good force, the delegation from that city numbering nearly 40.

Woodman's Hall was the place selected for the meeting, and proved adequate for the purpose.

President Z. T. Miller, of Bloomington, called the convention to order at 2:30 Tuesday afternoon, and Henry Sandmeyer, Jr., of Peoria, then introduced Mayor Lynch, who welcomed the members with a particularly hearty greeting. This was responded to in an appropriate manner by the president.

The enrollment of new members followed, a considerable addition being made to the list, covering 51 firms, making the total membership 119.

PRESIDENT MILLER'S ADDRESS.

The president's address to the members was an exhaustive one, and we make a number of extracts from it.

In extending to you the greetings of hope underlying the purposes of our organization, I enter upon my duties today with every pleasure the good cheer and hearty co-operation your presence here implies.

* * * *

An eloquent tribute was here paid by the president to the memory of the late Treasurer Theodore Krueger and Ehler Goettsche, member of the executive committee, who were both extremely active in the organization of the Association, and whose early demise was universally deplored by all its members.

President Miller continuing his report pointed out some of the necessary changes which he hoped would be properly enacted by the convention.

1st. I find that our constitution and by-laws are entirely inadequate to the purpose of our Association. They create offices whose duties are too indefinite to insure proper division of the work, and create duties without providing means to accomplish them, and which needs call for an entire revision.

2d. Care should be exercised by this convention as well as by the committee upon whom may devolve the duty of revising these by-laws to keep the duties of officers and the means to accomplish them within reasonable harmony. Before this Association had developed into permanent organization I opposed the \$3 limit of our dues as an unwise proposition, foreseeing that the limited means it provided would destroy the efficiency of our Association.

I still hold that if the results to be accomplished by this Association are not worth more than \$3 a year, then they are too insignificant for you or me to waste valuable time upon the institution. Appreciating the fact that it is impossible for a committee to give these matters the requisite amount of thought and study during the time allowed by our meetings, I therefore suggest that the rules be suspended and a few amendments made under which the Association may operate for the present year, and that the Executive Committee be instructed to report a revised form of constitution and bylaws at our next annual meeting.

* * * *

NATIONAL ASSOCIATION.

At our fall meeting we adopted a resolution favoring a national association, and the efforts toward this end have resulted in a call for a National Conference, to be held in Chicago, March 12, for the purpose of inaugurating a uniform policy over the entire organized territory, and to consider the question of a national association.

At present we find that each State association not only lacks the force of influence greater numbers would give it, but the non-co-operative feature of these conditions also

frustrates the purpose of association by allowing the support of ten organized States to institutions against which the one might have a just grievance.

The great importance a national association would become to the trade in successfully accomplishing that which at present is impossible for the single State association, the opportunity its meetings would provide to present and determine the issues pending in any State and bring these matters before our State associations to receive the uniform emphasis 3000 dealers can give such determination, are some of the tangible forces to recommend such association.

I believe, however, that beyond these reasons there are hidden forces underlying a proper national association, which will make the membership in a Hardware association of such commercial importance to the dealer that he cannot afford to stay on the outside.

* * * *

SIX PROPOSITIONS AGAINST DEPARTMENT STORES.

Here are six propositions upon which I base my views against department store systems:

1. The ruinous influence their underselling process has upon quality of manufacture is demonstrated during the past ten years in goods which are now but a semblance or shadow of their former quality.

2. The improper advantage they take, under tax laws, to ruin and drive out of market lines of goods by selling them as baits for less than cost of manufacture, until their commercial value is ruined and their manufacture must practically be discontinued.

3. The discouraging influence such actions have upon the higher ambition of mechanical minds to excel destroys an essence to which we must concede considerable importance as a factor in attaining our present commercial standard.

4. Their method of wrecking the small merchant's business by continually harrassing him in unloading upon the market goods at less than cost and preying upon the ignorance of society to balance these losses through inferior qualities and corresponding advance of prices in other goods.

5. Their tendency toward changing the opportunities and privileges of independent support into a system of underpaid labor, a condition whose natural result enforces celibacy and encourages the accompanying crime of infanticide, thus establishing like conditions under which France is known to be fast falling into decay.

6. Their influence in establishing a standard of wages, which, from force of circumstances, must be followed by all kindred lines of retail trade, inadequate to respectably support the woman whose labor is her only support.

* * * *

I hope this is sufficiently plain to demonstrate the injuries inconsistency of labor produces for itself, by which no one profits but the rich, and from which, sooner or later, society at large will reap the moral effects. Advocates of these institutions assert that the conditions of female labor in these establishments is largely due to "girls of the reasonably well-to-do classes offering their services for whatever they can get as a little side money." This, however, would not mitigate or excuse the evil influence of the act upon our social fabric, but, if true, simply adds enormity to the deed.

* * * *

LESS \$3 WOMEN; MORE \$15 MEN.

Let society discountenance women of well-to-do circumstances peddling their labor for less than men should have for the same services and avoid establishing an unbalanced condition of labor from this source, and then do all else to patronize houses who pay a living wage scale, though they may not offer the bargains made possible by a commercial system which involves the hope of home and family, too often jeopardizes the soul, and is fostering an unwise and unjust heritage for our progeny. A great deal more might be said upon this moral phase, but I will pass it with the volumes contained in this sentiment: Less \$3 women; more \$15 men. Less millionaire merchants; more happy homes. Less demagogism; more politics from whose influences men and women will learn a higher

appreciation of American patriotism. Dark as the clouds upon our political horizon may ever appear, let us bear in mind that beyond the clouds the sun shines bright as ever and will continue to shine until the end of time, and that the cloud in its blackest form is but a combination of elements in the course of nature's wise laws, and that the same laws which gathered them and limits their duration in harmony with their purpose likewise establishes the forces under which they fall into dissolution that all nature may rejoice in the purified atmosphere the process produces. Observe these laws and all will be well.

SECRETARY REEVES' REPORT.

Lewis M. Reeves, of Peoria, secretary of the association, then presented the following report:

In presenting this my first report to the second meeting of this association I wish first to thank the members, and especially our president, for their hearty co-operation and assistance in carrying out the work set before us at our last meeting. We have labored under difficulties; first, in not having had sufficient time as an organization to perfect a satisfactory working basis; secondly, the lack of sufficient funds, but I am glad that under these existing circumstances I can make as favorable report as I do.

* * * *

My work since we adjourned has been the mailing of over 1700 circular letters, prepared by President Miller, to the trade, asking them to join our Association and be in attendance at this meeting. Also, in order that we might revise our list of legitimate dealers of the State, that they mail a list of the dealers in their town to the secretary, but I am very sorry to have to add that of all the replies that were received but five or six contained the asked-for list. Our list is not complete and we have the names of many who have been out of business for years.

Later I mailed 1700 postal cards, calling attention to the place and date of this meeting, with a wish that those who had planned to come would notify. The response was very satisfactory. About 300 letters have been written, a great many to merchants who were desirous of information regarding the Association, and what they would gain by becoming members. These I have explained as well as possible, but the objects are so many that time would not permit to write at such length as I should have liked.

OUR MEMBERSHIP.

There were enrolled at our first meeting 54 members—32 from Chicago and 22 from the State. Since, we have enrolled as new members 3 from Chicago and 31 from the State, including 16 in the city of Peoria, which gives them a membership in this Association of 19, or every retail merchant in the city. Total membership at this writing, 88.

From replies of those who have signified their intention to come here and enroll, the membership of our second meeting is all that we possibly could ask.

NATIONAL ASSOCIATION.

The plan for forming a national association has been ably carried out by our president, and the year 1900 should mark a new era in the business of the retail Hardware dealer.

Some plan of inducing every retail Hardware dealer in the State to become a member of this Association should be adopted by this convention whereby we can abolish rivalry and enmity and fill in their places co-operation and friendship.

One of our members, Bagby Brothers, of Tuscola, took upon themselves to send to the trade in their vicinity a personal letter, stating the objects of this Association, and asking that they join with us at this meeting. The idea was a good one, and each one of us should consider it his personal duty to induce all within reach to enroll.

NO GRIEVANCES.

There have been no grievances reported excepting one which the secretary himself had, and although no satisfactory settlement has been made, still there is no likelihood of a repetition of such an affair.

The few months which have elapsed since we last met have been crushing ones to the Association in that we have lost through death two of our most enthusiastic and earnest workers as well as officers. On December 4 Theodore Krueger, our treasurer, and on December 25, Ehler Goettsche, member of the Executive Committee, both of Chicago, passed to the great beyond.

To them we owe our existence, for through their untiring efforts the Illinois Retail Hardware Dealers' Association

was born, and it is sad that they should be deprived of seeing it grow, gain strength and become a power. But their memory shall live as long as the work they began, and their names will ever be associated with this Association.

After the death of Treasurer Krueger, President Miller appointed to fill the vacancy Geo. A. Engelhardt, of Chicago, but the vacancy in the Executive Committee was left open.

Much credit should be given the several trade papers for the interest they have taken in our work, and the assistance they have given us.

In conclusion I will state that our first year has been a short one, and although our growth is in a way satisfactory, still it is not what it should be, for with the 2000 retail dealers in Illinois there should be at least 50 per cent. who take enough interest in their business to associate themselves in such an organization as this for their own protection, and a little argument will soon convince.

TREASURER'S REPORT.

Treasurer George A. Engelhardt, of Chicago, read his report, showing receipts of \$227; payments, \$179.59; balance, \$47.41.

The president appointed the following Committees: Auditing Committee, W. J. Krueger, of Chicago, William Bittel, of Peoria, and D. D. Velde, of Pekin. To this Committee the secretary's and treasurer's reports were referred.

Committee on Nominations: James A. Hunter, of Peoria, G. R. Lott, of Chicago, G. S. McCurdy, of Bloomington, W. B. Costello, of Chicago, and F. E. Bonney, of Paxton.

Committee on Resolutions: G. R. Lott, of Chicago, Lawrence Babst, of Kankakee, H. E. Wadsworth, of Jacksonville, H. G. Cormick, of Centralia, R. H. Griffith, of Rushville. Frederick Kurtz, Chairman of the Grievance Committee, reported that there were no grievances under consideration.

A paper was then read by F. E. Bonney, of Paxton, on the subject:

"DO MERCANTILE INTERESTS DEMAND A CHANGE IN OUR MONETARY SYSTEM?"

We make the following extract:

* * * *

CHANGES DEMANDED.

You may ask what changes for the better, I believe, are demanded, and I will name a few.

1st. A greater stability and permanency. A system whereby the money question is taken as far as possible out of party politics and placed where the changes of parties or the needs or acts of speculators cannot affect it.

WE WANT A DOLLAR

that will not hide at the sight of a Democrat or Populist, or risk its life in gyrations and leaps of joy when a Republican passes by. A dollar that will not seek the cellar when a Gould dies, or the housetops when a Vanderbilt is born. A dollar that is just as comfortable and contented and just as much at home in the hod carrier's pocket as in the millionaire's safety deposit vault. A good, common, every day, every year, every century dollar, that is not afraid to travel by night or by day, and that does not require a life preserver when it crosses the seas, or need a hypodermic injection to brace up its nerves when it meets the dollar of any other nation. A dollar that is good wherever the ebb and flow of the great ocean of commerce may land it. A dollar whose value is never for an instant questioned by Democrat or Republican, by friend or foe, and which is honest and clean and true by the judgment of man and the laws of the most high.

I don't care what its material, color or weight, so it fulfils the tests enumerated.

The convention then adjourned until Wednesday morning. In the evening a number of tickets were provided the delegates for admission to a theatrical performance, that being part of the entertainment provided by the manufacturers' and jobbers' committee on entertainment.

WEDNESDAY MORNING SESSION.

The convention assembled Wednesday morning, the session being entirely restricted to members, being in the nature of an executive session, but members of the trade press were invited to be present. Several papers were read: one on local organization, by W. J. Krueger, of Chicago, who was followed by William Bittel, of Peoria, on the same subject. A discussion followed relative to the

subjects brought forward for treatment, which was participated in by a number of the delegates, who assisted materially from their own experiences, the discussion being thoroughly enjoyed by all present.

WEDNESDAY AFTERNOON SESSION.

The convention was called to order by President Miller at two o'clock, who called upon the secretary to read a letter from Otto L. Schulte, of Freeport, having reference to the desirable object of furthering the organization of a National Retail Hardware Dealers' Association.

A memorial address upon the death of Theodore Krueger and Ehler Goettsche was then read by W. B. Costello, of Chicago, who had prepared it. It was a very able address, and did justice to the memory of the founders, workers and co-laborers who had so recently died. The memorial as read was ordered spread upon the minutes, and a copy ordered to be sent to the families of the deceased.

G. R. Lott, Chicago, chairman of the committee on change of the constitution and by-laws, reported a number of changes, which were approved. A motion was made by H. G. Cormick, of Centralia, that the article of the constitution and by-laws providing for an investigating committee of three members elected annually be changed to read that the investigating committee consist of five members, and that they should be distributed over the State, three members of that committee constituting a quorum to do business. The motion was adopted.

The committee on resolutions then reported a number of resolutions having reference to matters pending before the Association, which were adopted. Others present were called upon for remarks, upon the observation of the president that he would like very much to know whether the jobbers present considered it good policy to do the wholesale business of the country and then sell to the retailer's customers. There were many who responded to the invitation to ventilate their views, and quite a number of interesting little addresses were made, as it was very evident they were glad of the opportunity to so express themselves.

The auditing committee made the following report which was received and adopted:

We, the undersigned auditing committee, appointed to examine the books of the secretary and treasurer, have examined the same, and found them correct. The committee after considering the financial condition of the Association would recommend that each member be assessed one dollar, owing to the fact that it is no more than proper to compensate our president and executive committee at such times as they are called away on official business.

W. J. KRUEGER,
WILLIAM BITTEL,
D. D. VELDE.

ELECTION OF OFFICERS.

W. B. Costello, for the committee on nominations, presented the following list of officers as their choice:

President, Z. T. Miller, of Bloomington.
Vice-president, George A. Englehardt, of Chicago.
Secretary, L. M. Reeves, of Peoria.
Treasurer, F. F. Porter, Chicago.

EXECUTIVE COMMITTEE.

Z. T. Miller, Bloomington.
G. A. Englehardt, Chicago.
L. M. Reeves, Peoria.
F. F. Porter, Chicago.
D. D. Velde, Pekin.
D. McLaughlin, Chicago.
L. Babst, Kankakee.
L. Rosenberg, Chicago.
Charles Mauer, East St. Louis.

GRIEVANCE COMMITTEE.

Fred. Kurtz, Chicago.
H. G. Cormick, Centralia.
J. A. Hunter, Peoria.
F. E. Bonney, Paxton.
H. N. Murphy, Galesburg.

The committee also nominated the following to attend

the conference at Chicago for the purpose of forming a national association: Z. T. Miller, of Bloomington, and L. M. Reeves, of Peoria.

The report of the committee was received and the officers nominated were elected by acclamation.

Upon suggestion of the president, to save extra work for the secretary, the grievance committee were empowered to elect a chairman and secretary, so that the members could refer any grievances to the secretary of the grievance committee direct. The question of selecting the next place of meeting was next in order, and, after a friendly contest between Galesburg, Springfield, Decatur, Bloomington and Freeport, it finally resulted in the selection of Galesburg.

The following amendment to the constitution, to be known as Section 2 of Article II, was adopted:

Applications for honorary membership may be received from parties not directly interested in the retail Hardware business, who shall be entitled to the social benefits of this organization but not be admitted to business meetings and have no vote. The fee for honorary membership shall be \$2 and annual dues \$1.

PROGRAMME FOR 1901.

In reference to the programme laid out for next year's meeting, the president said:

There is an important item that I want to mention in regard to our next meeting. Your officers were greatly handicapped in preparing a programme for your meeting. As you are aware, last fall we went to Chicago, and we were strangers; we are just beginning to get acquainted with one another. Prior to this time we did not know whom to select to take part in the programme. I have made a list, and I want to notify all on it that they are going to be on the programme in 1901. I shall not assign your subjects. I will let you study this matter up yourself and see upon what subject you would like to speak. I will read the names: Messrs. Bonney, Costello, Griffith, Cormick, Lott, Reeves, Miller, Rosenberg, Shaw, Bittel, Swan.

It was made the duty of the executive committee to investigate and report at the next meeting plans of operation for the ensuing year.

After some discussion of the question of co-operative buying, the convention adjourned with the expectation of continuing the discussion on the following morning.

Wednesday evening was devoted to a banquet given at the Fey Hotel by the Hardware interests of Peoria, which included the jobbers, manufacturers and retailers. The local committee astonished every one by the results of their labors. It was an excellent affair, in which a fine orchestra participated in making the surroundings exceedingly pleasant, and the tables were arranged in convenient shape to entertain the 200 delegates and other guests who participated. It was remarked that for an Association that was less than a year old it was an unqualified success. A leather souvenir card case, memorandum book and pocket-book was placed at each person's plate, presented by Clark, Quien & Morse, of Peoria. Charles Clark, of the same firm, acted as toastmaster, and was an admirable selection for the position. A number of toasts were responded to and short addresses made by those whom he called to the front.

THURSDAY MORNING SESSION.

The convention was called to order by the president at 10 o'clock. On motion, the president was authorized to appoint one or two honorary delegates to the conference at Chicago from the Chicago retail trade who are not represented in the State Association at present.

The discussion of the question of co-operative buying was then continued, in which the president participated. At the conclusion of the discussion the convention then adjourned sine die.

The United States has the second largest city in the world (New York, population nearly 4,000,000), with two cities (Chicago and Philadelphia) each exceeding 1,000,000.

OHIO HARDWARE ASSOCIATION.

The sixth annual convention of the Ohio Hardware Association was held in the city of Cleveland on Wednesday, Thursday and Friday, February 28th, and March 1st and 2d. Never before in the history of the Association has so successful a convention been held. The attendance was large and enthusiastic, and the number of new members added especially gratifying.

Sessions were held in the Chamber of Commerce building, and during the first day nearly 200 visitors signed the register at the Association offices in the banking room on the east side of the ground floor. During the day greetings were exchanged at headquarters by the delegates and visiting representatives, several firms having reserved rooms at the hotels, enabling friendly calls to be made, and the offices of many of the Cleveland manufacturers were made headquarters for groups of their customers to make themselves perfectly at home. In this hospitable welcome the jobbers also participated largely.

At the headquarters of the Chamber of Commerce building members of the several committees had desks and telephones, and writing material and papers were placed at their disposal; committeemen were in waiting to furnish any information desired regarding hotels, etc.; there was a registry department for members and visitors; stenographers were also furnished. Representatives of the manufacturers and jobbers furnished cards with lists of establishments delegates desired to visit; there was a free telephone service, a Question Box to receive contributions, and also officials prepared to receive applications for membership and respond to payments of dues. These were all provided and at the disposal of the delegates, who met a warm welcome on every hand. At the Colonial Hotel assembly room, where the headquarters of the delegates were established, committees were in waiting to receive and entertain the wives of the members, making it possible for everyone to feel perfectly at home.

WEDNESDAY'S SESSION.

About 600 delegates from the various cities of the State were present, and, with the visitors, nearly filled the auditorium of the Chamber of Commerce building. The decorations in the hall were unique and handsome. The stage was banked with palms, and American flags made a small curtain. Above the president hung a large padlock nearly eight feet long. The padlock was so obscured that it could hardly be noticed before the convention convened. As soon as the president, however, called the delegates to order the current was turned on, and the lock was ablaze with hundreds of small incandescent lights. "O. H. A." was printed across its face in electric lights. The padlock was designed by E. H. Luetkemeyer, of Cleveland.

The proceedings opened on Wednesday morning with a meeting of the executive committee, which was held at the Colonial Hotel. Matters appertaining to the convention and of interest to the Association were then discussed. The convention was called to order in the Chamber of Commerce building at 2:30 by President H. C. Wiseman, of Springfield. Secretary John F. Baker, of Dayton, called the roll. After the reading of the minutes of the last annual meeting, which was held at Toledo, President Wiseman delivered his annual address.

Secretary John F. Baker, of Dayton, then made his report, which we give in full as follows:

SECRETARY'S ANNUAL REPORT.

In presenting to you my fourth annual report, I take

great pleasure in giving you first some information regarding the growth of our Association.

At the close of the Session of 1895, we numbered 16 members; Session of '96, 36 members; Session of '97, 60 members; Session of '98, 107 members; Session of '99, 221 members, and at the opening of the present Session, 273 members. In one of his former reports, the Secretary made use of these words, "I have reason to believe from the correspondence I have had with dealers, that our growth will be slow but sure, and that at no distant day, we will be one of the largest, if not the largest, association in the Union."

MEMBERSHIP HARDWARE DEALERS ONLY.

When we reflect that our membership is confined only to Hardware dealers, and that we do not combine as some other States do, the stove and agricultural implement interests, then it will be seen that we have undoubtedly at this time the strongest association in our country.

That this increase in our membership is gratifying is true, and more especially so to those of us who have been identified with the organization from its beginning. We have had faith in its future and efficiency that has never wavered, and now that it has reached its present strength, ask you to unite with us in the gratification we feel as we contemplate our numbers and our prospects.

The past year has been one of activity on the part of the officers as well as the members of our Association. New names have come to us at various periods of the year showing that the members were energetic and efficient in missionary work. The members of our Executive Committee have been especially active, and to them we must attribute much of the success that has come to us.

HEAVY CORRESPONDENCE.

The correspondence relating to the work of the Association has been the largest in its history, and has been confined not to our own State alone, but to the trade throughout the Union. Never before in the recollection of the Secretary, has he been in receipt of so many inquiries regarding the aims, benefits and possibilities of the Association, as during the past year, and while to many of his replies no further correspondence ensued, yet surely the fact that the information was desired, gives evidence that there is a spirit of inquiry abroad, and that the Association idea is infesting the minds of the dealers in the land.

During the past year the complaints filed with the Secretary numbered eighteen. These complaints were made against certain jobbers and manufacturers by the members of our Association who objected to the selling of goods direct to the consumer. Of these eighteen complaints, but two remain at this time to be adjusted, these having come to the Secretary just prior to this meeting. The correspondence relating to these complaints is on file with the Secretary, but is so voluminous that the reading of it would occupy the entire session of one day. In the majority of them the trouble was quickly adjusted, but in some cases the grievances were not so readily disposed of, but involved a correspondence that occupied the attention of the Secretary as well as the offender for a considerable portion of time. While in some instances, the parties offending were at first inclined to be indifferent to the complaint, yet the Secretary succeeded in every instance in establishing the justice of the claim, defending the rights of the members and also succeeding in getting from the offender the promise implied or direct, to refrain from the selling of goods to the consumer.

It has been the policy of the Secretary to so adjust these matters as that neither jobber, manufacturer or retailer might be aggrieved, or that the friendly relations existing between them should discontinue or be severed, but on the contrary, that a spirit of forbearance and confidence might always obtain, and, while it was the policy at all times to be courteous and conciliatory, yet he has always insisted that the principles of the Association should not be lost sight of or forgotten, but that they should be maintained since they were just and proper and right.

CAUTION URGED.

In several instances, the member filing the complaint, suggested that vigorous measures be employed in bringing the offender to terms, but at this point, the secretary is prompted to say that he does not believe that the end desired can be obtained in using language harsh and irritating, but that pursuing the course he has adopted, has resulted in placing the Ohio Hardware Association before the people of an organization which seeks to remedy some of the evils that are threatening us, but to do it in a way that friendly relations may prevail at all times between its members and those who are not, or cannot be numbered among us.

In concluding this part of my report, I desire to suggest that any member making a complaint, should first see that it is well grounded, and that it is just and right, and that it is not based on ill will or a desire to "get even" with any jobber or manufacturer for some fancied wrong. The secretary now calls to mind an instance in which complaint was made against the wrong firm, requiring the exercise of all the ingenuity he possessed to withdraw the charge and do it gracefully.

Since our last meeting, death has taken from us a former member, Mr. W. V. Marquis, of Bellefontaine. Notwithstanding the fact that Mr. Marquis had severed his connection with The Marquis Hardware Company, he took a lively interest in the welfare of our Association and expected to be with us during this session.

During the year, we received from the Southern Jobbers' Association, a record book to be used at our Annual Session, for the purpose of registering the names of our members as well as our visitors. We suggest that our members make free use of it and in the days to come it will possess an interest that will be of inestimable value.

On or about the middle of November, the executive committee held a meeting at the Colonial Hotel in this city, to make arrangements for the coming session. As indicative of the interest manifested, all were present but one, who was unavoidably detained at home. A program was arranged, and the work outlined, and if our session now being held be a success, the credit should go to the executive committee.

The annual report of your secretary does not include all that might be said, but which by reason of its volume must be omitted, inasmuch as some 800 letters have been written during the year, but he desires to say that the influence of our Association is slowly but surely being felt among the dealers of the State. Numerous local organizations have found their origin in our own Association, and dealers who were known to be exclusive or antagonistic, have come to our meeting and under its beneficent influence, have become social and friendly, the result being in later days to join each other in some sort of an alliance for the betterment of trade, the unification of prices, and that other benefit which invariably follows—an increase in profits.

In conclusion, the secretary begs to extend his sincere thanks, first to our president, who has been to him throughout the year a tower of strength, and also to the executive committee, for words of encouragement, and for valuable assistance at times when it was needed most, and finally, to the members for the kindly letters he has received from them regarding the work of our Association.

The report of the treasurer was incorporated with the secretary's report, and was then read.

The death of the Hon. W. V. Marquis, of Bellefontaine, was reported.

A recess was then taken for the payment of dues, following which the report of the committee on the revision of the constitution was received and adopted. It provides for certain minor changes in that document.

The president then appointed the following committees:

On death of W. V. Marquis: Chas. B. Horner, of Bellefontaine; S. L. P. Stone, of Urbana; A. D. Hogendobler, of Osborn, and A. G. Mangus, of Defiance.

On resolutions: W. P. Bogardus, of Mt. Vernon; C. E. Smith, of Malta, and Will H. Jones, of Columbus.

On Question Box: J. G. Reid, of Greenville; B. C. Drake, of Zanesville; W. A. Fearn, of Columbus, and H. A. Harger, of Canal Dover.

On nominations: T. J. Morris, of Lima; F. W. Ingalls, of Bryan; Charles Boebinger, of Cincinnati; J. P. Duffey, of Greenville, and J. C. Conwell, of Xenia.

This was followed by an "experience meeting," during which the older members of the Association recounted incidents which they experienced during the many years in trade, many of which were extremely amusing, interesting and instructive. An adjournment followed until Thursday morning.

THURSDAY'S SESSION.

The convention was called to order at 10:30 A. M. W. P. Bogardus, of Mt. Vernon, delivered an address, "Words of Welcome to New Members by an Old Member."

John Plummer, of Bellefontaine, read a paper on "The Relation of Expenses to Profits," which we give herewith:

"THE RELATION OF EXPENSE TO PROFITS."

Mr. President and Fellow Craftsmen:—I certainly appreciate the high honor conferred upon me by your worthy president and secretary in asking me to take part in the programme as it is presented to this meeting at our annual gathering; high indeed, because I see before me to-day men whose superior intellect cannot be found at any other collection of men from one business in our State.

And while appearing I shall not attempt to apologize for my effort at the treatment of the subject, but I shall simply handle it as a business man, and tell it to you as one business man would tell it to another, without any effort at rhetoric or eloquence.

As stated on the programme, my subject is "The Relation of Expense to Profits."

And possibly no other subject is of such vital importance to us as the consideration of our expenses and profits, as none of us are in the Hardware business simply for past-time, but for the profits accruing therefrom.

We are compelled to give attention to this subject, because like all other professions and branches of business, the Hardware business is changing, and the methods of some years ago will not apply to to-day; or if applied, the result will inevitably be a change of hands in the ownership of the store.

Not long ago a man with average ability, and a little money, could open a Hardware store in almost any village or city in our State, and he was sure of a good living. His expenses were not heavy and his customers were not cranky. It was not necessary for him to have his store as well finished as the store of the dry goods merchant; it did not need to be so orderly as the grocery, because most of his customers were men, farmers we may say, who came to buy and not to criticize; men who knew what they wanted, came and got it, paid their money and left. As to the Hardwareman himself, his appearance was not much of a consideration, his dress did not worry him; but times have changed, the customers changed with the times and they now demand something different. They asked for better stores, and better stores came; they asked for a greater variety of goods, and the greater variety appeared on our shelves; they asked for more attention when making their purchases, and more clerks were behind the counters; they demanded of the proprietors more attention to their personal appearance, and more new clothes were needed; clean linen takes the place of the once common hickory, and, my friends, what did all this mean? It simply meant that civilization in its strides forward caused a most wonderful increase in our expenses, and in addition to the time and money at first required, the merchant was compelled to throw in a little brain work to keep pace with the growing demand.

There are thousands of expense items now that some years past were never dreamed of, and some of these I shall enumerate at the proper place.

No man can expect to succeed in any business, no matter what, without keeping a careful record of his standing; the business he does, his expenses and his profits; and when he does this from year to year, he is able to see where he can retrench and where he ought to expand, where he is losing and in what particular line he is making a profit.

NO GUESS WORK ABOUT HARDWARE.

Hardware is no longer a "guess," it has been reduced to a scientific basis, and the man who starts into the business with a clear conception of that truth has plenty of room for success.

Let us now look at some of the items of expense, and I may say, this calculation that I give has been taken from the books of some of our best business men and averaged, so that I have no hesitancy in saying that I think they come very nearly representing the true expense of an average Hardware store.

Per cent. of gross profits on sales 20 per cent. On these gross profits we must count our expenses if we would truthfully represent ourselves, and we find that of this 20 per cent. profits they are spent much as follows:—

(Three per cent. freight is added and becomes a part of the cost of the goods.)

Per cent. of gross profits paid for help	21%
Rent	9%
Fuel	1 1/2%
Light	1 1/2%
Stationery, etc.	3/4%
Stamps, telephone and telegraph	3%
Taxes and revenue	2 1/2%
Advertising	3 1/2%
Insurance	3 1/2%
Incidentals	5 1/2%
Total	48%

Here we see that almost one-half of our 20 per cent. gross profits has been paid before we come in for any share ourselves, and the remaining 52 per cent. of the 20 per cent. of our sales may be classed as our salaries; interest and doubtful accounts.

Is it possible to cut down this expense list? Over this question I have worried considerably, and I am afraid I must answer in the negative.

And if we are compelled to judge of the future by the past, instead of the expenses being cut down, we must face the inevitable, and acknowledge there is more chance for an increase.

GIVE GREATER BREADTH TO BUSINESS.

How then shall we meet this emergency? One answer I will give this question: viz., Widen our trade, that is, make more branches.

A study of this answer will show that it is practicable. It is so in other lines of business; the grocer does no longer confine himself strictly to groceries; the dry goods man has more than mere dry goods on his counter, and shall not the Hardwaremen profit by their example? Add to your stock different lines, as may suit the community. I find that I can handle stoves, farming implements and saddlery to good advantage; the expense being but very little more, while it gives me a greater base to work upon; a greater investment, a larger amount upon which to count my per cent. of clear gain; hence larger real profits.

In this way we have an opportunity to increase our sales, to make use of our increased facilities without much additional expense; hence whatever profits we have are more clear gain than formerly.

Under this method we can figure to a cent almost all our expenses and profits. For instance, let us suppose a man, with an investment of \$5000 in stock, carefully chosen to suit the place where he is, should have sales amounting to \$20,000 per year, his gross profits would be \$4000, his net profits \$2000. Allowing the proprietor \$100 per month, there is still left \$800, which will stand for his dividend or (16 per cent.) interest on his money invested.

This, of course, takes it for granted that the proprietor is a business man, a man who not only puts his physical power into the work, but brains also; a man who gives it his thought, and plans just what he must handle to suit his trade; who is careful that no dead stock is allowed to accumulate on his shelves, or bad accounts on his books.

Now, my hearers, let us moralize for a few moments, and then I am done:

THE PULSE OF THE BUSINESS.

Why are we in the Hardware business? This may be answered, and answered truthfully, that we are in the Hardware business for the "Almighty Dollar;" we are in it to succeed and not to fail, and yet some of us *do* fail, and for the simple reason that we do not give sufficient attention to "The Relation of Expense to Profits."

Gentlemen, keep your hand on that place, which I take the liberty of calling the Pulse of the Business. Notice its record, and should your expenses exceed 50 per cent. of your gross profits, something is wrong which must be righted. Let every item be watched; be systematic; be not tempted to launch into speculations with the expectation of great future profit; such men may succeed, but where one is successful, nine will fail. Study your business, get to understand it, stick to it and it will stick to you.

Quite a discussion followed the reading of Mr. Plummer's paper, in which a number of delegates participated, the whole subject proving an interesting one to the delegates present.

This was followed by a paper on "Stock Taking and Dead Stock," prepared and read by John S. Spoerl, of Hamilton.

Mr. President and Gentlemen: The subject selected by

your committee for my remarks is in part distasteful to me. There is no part of my duties that I dislike more than stock-taking, and I do not even want to talk about it. That portion of the subject will, therefore, be passed by in silence for the consideration of those more capable than myself.

Dead stock, to my mind, is considerable of a ghost, as the more one tries to find it the more it eludes your search, or rather the more you try to look for it the less real it becomes. The very fact of directing your mind towards dead stock brings it to life and proves that it was only sleeping from neglect. When your attention is directed to certain goods more than to others they will naturally be the first that you will talk your customer into buying. Simply thinking of them makes them go at every opportunity that comes along.

KEEP IN TOUCH WITH CUSTOMERS.

"Eternal vigilance" in obtaining a thorough knowledge of the wants of your trade is the price of success. Make it your incessant study to learn all the particulars possible about each of your customers, and keep in touch with their wants and tastes instead of your own. Classify your trade into grades, and select a representative of each grade and make selections in buying as though you were buying for them instead of for yourself. Remember also in selecting stock that you are, in fact, the agent of your trade, while the salesman's interest is with his employer instead of being with you. Make your own selections instead of letting him do it for you. Articles that he might recommend as being salable elsewhere might be entirely unsalable in your locality. Should any new article of merit be offered to you that would displace similar articles in stock buy very sparingly of it until you have disposed of the old stock before it is killed by the new. It may be true that your competitor may be offering the new articles before you do, but your customers are not supposed to know what your competitor is selling; they should depend on you to supply their every want in your line and go nowhere else.

HOW TO CONTROL YOUR TRADE.

To control your trade and hold it in this manner is a secret that is disclosed in one word, "honesty." The old man with a life-time experience will say that "Honesty is the best policy." The smart young man will say, "Get money honestly if you can, but get money," the inevitable result of which is failure. Never betray the trust placed in you by a customer, study each transaction separately, and make it bring a return of many others. A small profit on many sales to the same party will amount to more than a large profit on a single transaction that may cause him to never return.

You no doubt remember the time when the sale of locks Nos. 11, 13 and 22 were discontinued by the manufacturer. I fortunately had quite a stock of them on hand at the time, which many would have classed as dead stock. I placed an order for 25 dozen more of them at once, and when the stock of competitors was exhausted I doubled my price, and monopolized the demand that continued for repairs at an increased profit over more than up to date articles.

At one time I purchased a quantity of wire netting, a substitute for lath. It would not sell, nobody wanted it, dead stock from the first, it died "a bornin." I brought it to the front, recommended it for stable and window screens, cut it in small quantities to suit purchasers, and disposed of it all at a price far in advance of the price it would bring for the purpose for which it was intended.

At one time I purchased seventy-five barrels of mixed tiling from the dead stock of a dealer at \$1 per barrel. I found it to be a recreation to arrange the old stuff into new designs and patterns that were suited to the tastes of my customers. While the stock was old, the designs were new and put life into it to the extent of a profit of over \$500.

A certain customer comes to me at regular intervals and trades knives, simply to get rid of his old knife, which has become dead stock to him, while the old knife he gets from me is new to him.

The moment dead stock passes into new hands it becomes new stock to the purchaser. There is no dead stock until it ceases to move, then kick it along and keep it moving, and it won't have time to die.

GOOD BUSINESS METHODS.

Put your whole soul into your business, mingle with your customers, load a keg of nails into their wagon and learn you can about their wants, and, by suggestions that are always appreciated, fit their wants to your stock. Do not

get above your perch; keep yourself down to their level, or, still better, help them up to your own. Set good examples for them to follow; learn them the art of keeping stock alive by keeping it moving. Show them the advantage of holding the trade by honesty in each transaction, and grade their merit by continued sales to the same customer, instead of by the profit of a single sale that drives him to your competitor.

Lest you might infer that I am an old fogey, I want to digress from the subject of dead stock, and say a word about live stock. At one time I carried more than a dozen standard brands of razors; I was unable to recommend any one brand over the others; they were all equally good. I found that customers were frequently unable to make a selection; they expected me to assist them. I discontinued the sale of all the brands except one, which I now purchase in quantity, and have my own name put on them by the maker. The customers never get rattled now in making the selection of a razor; they have but one brand to select from, and, in the absence of others, it is always the best. My sale of razors has increased ten-fold. Every purchaser recommends them to others. If you can get your name on a good article it will keep it alive and never annoy you by becoming dead stock.

The opening of the Question Box followed, with the usual discussion, lasting until the close of the morning session.

There were upwards of twenty subjects discussed, and many good ideas evolved from the interested way in which the members treated the various questions.

THE AFTERNOON SESSION

The afternoon session was convened at two o'clock, with the discussion of the contents of the Question Box continued. This was really the business session of the convention, and during its progress occurred the adoption of resolutions, election of officers and the selection of a meeting place for 1901.

The afternoon session was scarcely convened before an unanimous resolution was passed ordering that \$200 in gold be paid John F. Baker, secretary, for services rendered during the past year. Mr. Baker had served as secretary four years and had declined a re election. This money gift was regarded more in the nature of an expression of good will than as a desire to consider it an equivalent for services rendered.

The report of the special committee on resolutions relative to the death of W. V. Marquis was received and adopted. The resolutions were ordered recorded on the minutes, and a copy to be sent to the family of the deceased; also to the papers.

The committee on resolutions reported through its chairman, Mr. Bogardus, the following, which were on motion adopted:

RESOLUTIONS.

Committee on resolutions, through its chairman, Mr. Bogardus, rendered the following report, which was on motion adopted:

1st. That the members of this association reaffirm the resolution of 1898, to wit: That we pledge ourselves to patronize no manufacturer or jobber who employs special salesmen to solicit orders from consumers or others not in the regular Hardware trade, this resolution not to apply to the supplying of large plants with material used in the construction of their manufactured products.

2d. That we again urge action on the part of our members, where there are two or more retail Hardwaremen in the town, looking toward forming a local organization, to the end that they may become better acquainted and more harmonious in their work.

3. That we recommend that there be a special committee appointed who shall present the need for, and urge the passage of, a suitable lien law to the Legislature now in session.

4. That we again protest against the exorbitant charges of the express companies.

5. That the corresponding secretary be instructed to urge upon our Senators and Representatives in Congress the necessity for favorable action on Senate bill 1439, which confers the powers on the Interstate Commerce

Commission originally conferred, but which have been nullified by the decisions of the Supreme Court.

They also reported the following resolutions of thanks, which were carried by unanimous vote:

That we desire to express as an association our appreciation of the efforts of our hosts, the manufacturers' and jobbers' committee of arrangements and the firms and corporations they represent, to entertain us; that we thank them heartily and are prepared to recommend them as hosts *par excellence*.

That the association extends its hearty thanks and expression of appreciation of the efforts of the local retail Hardware dealers of the city of Cleveland for their magnificent arrangements and efforts in our behalf.

That a special vote of thanks be extended to our own member of this committee, Mr. Davidson.

That a vote of thanks be extended to the president, H. C. Wiseman, for the able manner in which he has presided.

THE ELECTION OF OFFICERS.

The following officers were elected unanimously on the recommendation of the committee on nominations:

President, O. M. Scott, Marysville.

Vice-president, W. P. Bogardus, Mount Vernon.

Corresponding secretary, George M. Gray, Coshocton.

Financial secretary, W. H. Jones, Columbus.

Treasurer, H. G. Woodward, Sidney.

Executive committee: George B. Meyer, Cincinnati; George Guyton, Ada; Frank Harrison, Toledo; A. C. Rohrbacher, Akron; H. P. Davidson, Cleveland; Frank Winter, Lancaster; James B. Carson, Hamilton; and J. H. Brown, Washington Court House.

Cincinnati had a very strong delegation present to insist upon that city being selected for the next annual convention. They were successful in having their city chosen by the unanimous vote of the convention. Such other cities as felt like presenting claims waived their rights in favor of Cincinnati when it was understood that that city desired to show their hospitality for 1901.

While the members of the Association were participating in other features connected with the convention, the lady visitors were being entertained by A. C. Bliss, manager of the Manhattan Rubber Co. Mr. Bliss gave the ladies a dinner at the Century Club, which was followed by a sleigh ride, during which a stop was made at the Colonial Club for luncheon. The party on their return to the city then accompanied Mr. Bliss to the Opera House, and witnessed the performance by Julia Arthur of "More Than Queen."

The success which attended the sessions of the Association was due in no small degree to the Cleveland Retail Association, who kept open house for the entertainment of visitors in the library of the Builders' Exchange.

THE ANNUAL BANQUET.

In the evening the Association invited guests to the number of about eight hundred met in the Grays' Armory, Bolivar and Prospect streets, where the annual banquet was spread. The Armory was decorated with admirable taste, and ten long tables were nearly hidden beneath immense masses of beautifully cut flowers and other adornments. President Wiseman, the speakers and guests of honor, occupied a table at the head of the room, and the stage, which was a miniature forest of huge palms, was occupied by the orchestra, which rendered continuously patriotic and popular selections. At the conclusion of the important portion, that of the discussion of the menu, President Wiseman took occasion to express the thanks of the Association for the entertainment the organization had received. He said in substance that they expected to meet friends, neighbors and tradesmen, but did not anticipate such royal entertainment or magnificent welcome as they had experienced. The entertainment, he said, was beyond anything ever offered the organization. President Wiseman acted as toastmaster in the most ad-

mirable manner, and introduced the speakers of the evening.

O. M. Scott, of Marysville, responded to the toast, "Nails," and, in the course of his address, gave a history of that article, which he characterized as the foundation of the Hardware trade, dating from Scriptural times to the present. The different elements of the trade he treated as Nails, upon the proper handling of which business success depended.

The address of Mr. Scott on the subject of "Nails" was an extremely interesting one from a Hardware standpoint. It showed a vast amount of erudition, and was delivered in an extremely characteristic manner. We hope to publish it in full at an early date, being crowded out of this report for want of room. He was followed by C. S. Van Wagoner, of the Van Wagoner & Williams Hardware Co., who made an eloquent address upon the subject of "Cleveland's manufacturing interests." No man present was more thoroughly conversant with the subject than Mr. Van Wagoner, who has been identified for so many years with the progressive development of the manufacturing interests that formed the subject of his able address.

He was followed by R. R. Williams, Hardware editor of the *Iron Age*, New York, who delivered an address upon the subject of Hardware Trade Fraternity.

It was decided that Friday should be devoted to visiting the plants and stores of Cleveland manufacturers, jobbers and retail dealers. To enable this to be done in a systematic manner, four routes were arranged which included the following houses: American Bicycle Co., American Steel & Wire Co., Atlas Bolt & Screw Co., Bassett, Presley & Train, The W. Bingham Co., Bishop & Babcock Co., Bourne-Fuller Co., Born Steel Range Co., Chisholm & Moore Mfg. Co., Cleveland Hardware Co., Cleveland Stone Co., Cleveland Twist Drill Co., Cleveland Window Glass Co., Eberhard Mfg. Co., Ferrosteel Co., Forest City Paint & Varnish Co., Gibson & Price, Johnston & Jennings, Kirk-Latty Mfg. Co., Lake Erie Iron Co., Lamson & Sessions Co., Lockwood-Taylor Hardware Co., H. W. Luetkemeyer & Sons, McIntosh-Huntington Co., Mechanical Rubber Co., National Lead Co., National Screw & Tack Co., Ohio Rubber Co., J. M. & L. A. Osborn, Patterson-Sargent Co., Peck, Stow & Wilcox Co., Schneider & Trenkamp Co., Sherwin-Williams Co., Standard Sewing Machine Co., Standard Tool Co., Taylor & Boggis Foundry Co., Upson Nut Co., Upson-Walton Co., Van Cleve Glass Co., Van Wagoner & Williams Hardware Co., George Worthington Co.

The members of the Association met at 7:30 on Friday morning and selected which of the routes they desired to follow.

Recent Trade Publications.

JULIUS ANDRAE & SONS CO., Milwaukee, Wis. Catalogue of Andrae bicycles for 1900. Pamphlet catalogue, oblong in shape, 36 pages, printed on good paper, handsomely illustrated with half-tones, showing their entire production, and calling prominent attention to the numerous special features connected with this particular bicycle. The assortment runs from the ordinary wheels for ladies and gentlemen up to the same styles made with the Morrow Automatic Coaster and brake. This company also manufacture a tricycle attachment, and a line of tandems as well as triplets.

CORBIN CABINET LOCK CO., New Britain, Conn., and Nos. 11-15 Murray Street, New York. Four-page leaflet of brass box trimmings, strap and angle bracket, padlock eye, hasp and staple box corner and stay hinge, all made from cast brass and heavy pattern. The line consists not alone of heavy cast brass trimmings for large boxes and chests, but also light wrought brass goods for small boxes and cabinets. The articles are finely finished and first-class in every way. Hardwaremen frequently have calls

for these or similar goods, and are often at a loss where to obtain them.

FOX CUTLERY CO., No. 48 Centre Street, New York, and Dubuque, Iowa. Twenty-four-page catalogue of the Fox razor, a line of goods that has been on the market for a number of years, and attained celebrity from conditions of excellence which they have taken pains to make manifest to dealers handling the same. Their line of goods is handsomely illustrated with full-size cuts, from the cheapest to the finest hollow ground, and from the plain black horn handle to the finest carved handle of elephant ivory. Included in the contents of the catalogue are the Fox shaving cases, a line of goods original with this company, intended to be sold in sets complete, which consist of a case with razor, strop, etc., forming a complete outfit for a gentleman's use. In addition to the illustrations in the ordinary way, they also illustrate a number of handles which can be furnished if ordered on any of their line of goods, which makes the assortment an unusually large and extensive one for this class of cutlery.

McSHERRY MFG. CO., Middletown, Ohio. Oblong 36-page pamphlet catalogue covering their extensive line of grain drills, seeders, sowers, transplanters, disc harrows, etc. In this are fully illustrated and described the McSherry fertilizer drill, plain drill as well, the latest improved disc drill, broadcast seeder, sowers, disc harrows and automatic transplanters. These goods are fully described, and in many cases even the parts are shown in all their mechanical excellence, in order to have the dealer thoroughly understand the merit of the goods he is disposed to handle.

RUMSEY & SIKEMEIER CO., No. 521 N. Main Street, St. Louis, Mo. Pamphlet catalogue No. 45, of 134 pages, covering a line of stoves and ranges and other housekeeping appliances marketed under the trade mark of "Modern." The line includes steel ranges of every description, together with the usual cast-iron ranges of the usual style; an assortment complete of those suitable for oil, gasoline or gas, and with the regular and necessary appliances for the proper working of each description; a line of refrigerators and sewing machines, and a full line of goods suitable for the tinsmith, consisting of conductor pipe, eave troughs, elbows, metal roofings, tinner's tools of various descriptions, and stove Hardware in large variety.

E. C. STEARNS & CO., Syracuse, N. Y. Pamphlet catalogue for 1900, 110 pages, fully and completely illustrated, printed on excellent paper, and covering a line of Hardware specialties with which this house has long been identified. Among its contents will be found the Stearns ball bearing lawn mowers, parlor door hangers in great variety, including the Stearns, Warner's, the "Gem," Royal, Challenge and Munger's; likewise Hatfield sheaves, barn door locks and catches, Vanderbilt sash balances, wire cloth and window screens, with all the various trimmings necessary; spring hinges of numerous designs, truck casters, molasses gates, wood faucets, bone and meat cutters, etc. Included in its contents are the Stearns saw-vises in large variety; bench vises, drills and hooks; quilting frame and screw clamps; corner and carpenters' clamps; spoke shaves, hollow augers and bicycle stands. This is a very complete and desirable catalogue, and one worthy of attention by the Hardware dealer.

Do not seek for striking metaphors or sprightly epigram to decorate your ad. If such occur naturally, suggested by your subject, they may be used sparingly and with caution; but first consider whether you will gain anything by them—whether they really add force to the arguments you have presented in regard to your goods, or whether they are merely decorative. When in doubt always exclude them—*Exchange*.

NEW GOODS AND SPECIALTIES.

The Eclipse Cleanable Refrigerator.

The Eclipse Refrigerator Works, Burlington, Vt., are manufacturing the Eclipse Cleanable Refrigerator, a very good idea of the economies of which will be seen in the illustration that accompanies this article. The cut shows in a very thorough manner the perfect construction of this refrigerator and the ease with which its several parts may be removed and the refrigerator cleaned. No. 1 in the

illustration is the ice tank or chamber; No. 2 the tray or deflecting plate; No. 3 the lower flue plate, and No. 4 the ice rack. The removable ice tanks or chambers and connecting flues are made of stout bright galvanized sheet steel, and the joints of the former, being folded and soldered inside and out, they are consequently very strong. All interior parts being of metal, there is no exposed wood to absorb water, or any moisture that would necessarily cause a sour odor. The ice rack is made of bright galvanized or corrugated steel, riveted to stout iron cleats, so shaped and folded as not to prove an obstruction to circulation under the ice or free drainage to the waste-pipe. The provision shelves are strongly made of bright galvanized steel, rolled or corrugated, the slats being placed sufficiently far apart to admit a free circulation of air around the provisions. In their catalogues, which will be sent free upon request, twenty styles of domestic refrigerators are illustrated, most of which are made in two sizes, some being fitted with porcelain-lined water coolers. All are built of selected stock and lined with best zinc. A dead air space, if well insulated, is considered to be the best non-conductor of heat or cold. The frame on one side is covered with tough, heavy sheathing paper, which does not break or split, and the other with stout felt paper, forming one or more dead air spaces, according to the size of the refrigerator, covering all joints and nail holes, and making a tighter wall than any of the packed boxes.

The Cleveland Acetylene Gas Generator.

The Harris Mfg. Co., Cleveland, Ohio, are in the market to furnish the latest improved automatic Acetylene Gas Generator, an illustration of which we present herewith. It is claimed to be the most simple and economical device yet invented for the purpose of generating this new gas. It has no valves or stop-cocks to take care of. It is claimed to produce all the gas that is possible to obtain from the carbide, requiring absolutely no more time or care than would an ordinary coal-oil lamp. The manufacturers state that the "Cleveland" having been approved by the Underwriters' Association throughout their territory, it can be placed in the home or factory without affecting the in-

surance in any way or manner. In the description given by the manufacturers in their printed matter they state there are two classes of acetylene generators, termed the wet and dry process. In the first, a comparatively small amount of carbide is brought in contact with a large body of water. In the latter a small amount of water is applied to a large body of carbide. In the "Cleveland" apparatus illustrated herewith a proportionate amount of water is admitted to a small body of carbide, and perfect gas as to quality and quantity is the result. The carbide holder in this generator is made in radical compartments, holding about one pound of carbide each, and water is automatically supplied to only one compartment at a time. Thus, every time the machine operates it makes five cubic feet of gas and no more, and as the gas holder is always proportionately greater, more gas cannot be made than can easily be stored, making waste of gas impossible, and reducing after-generation to a minimum. As the gas is generated it passes through water in a pocket in the condensing chamber. This washes and cools the gas, and does away with a valve between the generator and gas holder. There are no valves used in its construction, because, as the manufacturers state, the necessity for using a check valve implies a degree of danger, as the gas carries a sediment which is deposited on the valve, causing it frequently to stick and get out of order. Without the use of valves they claim no combination of circumstances can occur whereby there could be the slightest danger in the use of this machine, and making an accident almost impossible. They publish in connection with this important subject a very graphically illustrated catalogue, which will be sup-

plied upon application, and which will furnish all the necessary information in regard to this important article.

Peerless Flue Stopper.

The Welling Mfg. Co., Columbus, Ohio, are placing on the market the Peerless Flue Stopper, as shown in the following illustration. They are neatly and handsomely made in three different styles—plain, lacquered and decorated. The fasteners are coppered spring wire, which is sufficiently strong to clamp itself to the sides of the flue and will remain substantially in its place after adjustment.

They are manufactured large enough to cover a seven-inch hole completely. They are placed upon the market at a low price, which the manufacturers will be pleased to quote upon request. Flue stoppers have become a necessity with every household, and should be constantly in

use, as they prevent all smoke or dust being blown out in the room from the flues.

The "Century" Sprayer.

A new sprayer, which The Deming Co., of Salem, Ohio, have gotten out this year, is the "Century," which we illustrate by the accompanying cut. This pump has their automatic agitator, brass ball valves, brass valve seats, brass cylinder, brass plunger and new indestructible plunger packing. No priming is needed as the cylinder is submerged. The air chamber is large and effective. The subject of spraying fruit trees is year by year attracting more general attention among farmers who grow fruit. The experimental stages in these methods have passed, and spraying is now known to be a necessity if first-class crops are to be secured. The Deming Co. manufacture a most complete line of spray pumps and nozzles, suited to all classes of horticulturists. Their apparatus is adapted to the needs of florists and growers of small garden truck, as well as to owners of the most extensive orchards. Their Bordeaux and Deming-Vermorel nozzles are used on all sprayers, of which this company make more than a dozen varieties. Their patent Kerosene Emulsion Sprayers have been on the market for several years, and are giving the best of satisfaction. The spraying months will soon be over, and dealers who do not have same should secure The Deming Co.'s catalogue and prices. They also make apparatus for spraying whitewash, etc. They manufacture a general line of pumps, including hand, wind-mill and power pumps, spray pumps and nozzles, triplex power pumps for operation by gas or gasoline engine, steam engine, electric motor, etc. The Deming Co.

have distributing agencies in the principal cities, their general Western agents being Henion & Hubbell, Chicago.

The Leonard Catalogue Cabinet

The Leonard Mfg. Co., Grand Rapids, Mich., are manufacturers of one of the most useful catalogue cabinets that we have had brought to our attention. It is sold by them combined with the Leonard System for Buyers. The cabinet furnishes a complete and convenient method for assorting and classifying within its facilities over 1,000 catalogues, circulars, postal cards, etc., and doing so in a compact form, while at the same time furnishing a ready

means of finding them when wanted. It enables the buyer to keep a cross-index for the contents of all catalogues, a system for recording the market value of merchandise, and a record of the movements of staple goods, which quickly detects dead stock, and enables the buyer to buy with some degree of certainty as to his wants. The cabinet, which we illustrate herewith, is made of solid oak, with quarter-sawn front, finished in golden oak and highly polished. The size is 32 inches wide, 24 inches deep and 63 inches high, outside measurement, being mounted on strong, ball-bearing casters. The illustration admirably shows the style and appearance of this desirable adjunct to the buyer's office facilities. The upper cupboard is divided into compartments that extend back the entire depth of the case. Large, thin books should be placed in these compartments with their backs to the front, while large, thick books may be placed upon the top of the case. The several drawers all have their special uses, the upper drawer being intended for small, odd-size catalogues, between the envelope and the standard 6x9 size; the second drawer is made for the regular standard size, while the small drawer at the right contains the card indexes. Just

below these two drawers is a sliding shelf, which can be used as a work table. The large drawer below the shelf contains nine compartments designed for those larger catalogues, say about 9x12 inches, to stand on edge, and also for 6x9 inch catalogues to stand on end. One of the drawers contains 27 compartments of suitable size for small-size envelope catalogues, circulars, folded down to fit the space, postal cards, etc. All the various bins are numbered, and the numbers on the drawer-pulls include the numbers on the bins. Space hardly permits us to give all the details regarding this satisfactory arranging of catalogues for the buyer's use, but full information will be furnished by the manufacturers, which will be found very attractive to those desiring this additional facility for systematic work.

The Mile in Different Countries.

Unless you think a miss is always as good as a mile, keep this little table: England (statute mile) and American (mile), 1760 yards; France and Belgium (kilometer) and Holland (legal mile), 1094 yards; Russia (verst), 1167 yards; Germany (long), 10,126 yards; Germany (mile metric), 1640 yards; Austria (mile post), 8297 yards; Denmark (mile), 8238 yards; Sweden (mile), 11,690 yards; Norway (mile), 12,182 yards; Spain (mile), 1522 yards; Portugal (mile), 2250 yards; Switzerland (mile), 8548 yards; Italy (mile), 2025 yards; Saxony (post mile), 7432 yards; Scotland (old), 1977 yards; India (Bengal mile), 2000 yards; Ireland (old), 2240 yards.—*Chattanooga Tradesman.*

The Bissell Prize Advertisement Contest.

Mr. Fred Macey, of Grand Rapids, Mich., who from his long experience in advertising is considered equal to a professional expert, has just completed his judicial examination of the many prize Christmas advertisements, which, since last December, have been sent in by the many customers of the Bissell Company who have striven for the different prizes offered by the company for the best written "ads." He has recommended that the prizes be awarded as follows:

- 1st prize, \$60. Robert Wright & Co., Brockville, Ont.
- 2d prize, \$40. Lay & Lyman, Kewanee, Ill.
- 3d prize, \$30. Dickson & Co., Newcastle, Pa.
- 4th prize, \$20. The Bush & Bull Co., Williamsport, Pa.
- 5th prize, \$15. L. J. A. Surveyer, Montreal.
- 6th prize, \$10. Emerson & Fisher, St. John, N. B.

"Invention hath no nobler art
than to lighten woman's labor."

A Gift Suggestion

Useful, handsome, lasting and satisfying. A Christmas present possessing rare points of merit. The Bissell "Cyclo" bearing carpet sweeper. "It will be a source of constant comfort and make the present toils of sweeping dry an anticipated pleasure. Its marks of superiority are the "Cyclo" bearings which give a surprising ease in action and an entire absence of jar or noise, making the working as smooth as velvet. Then there are the dust proof axle tubes which cover the axles so that dirt cannot wind around them and disturb the action of the machine. There is only one "Bissell" sweeper and only Bissell sweepers have these fine points of merit." Visit the basement and see it work.

PRICES:

"Prize," "Cyclo" bear. sv. dust proof axle, nickel parts.	\$3.50
"Grand Rapids," "Cyclo" bearing, dust proof axles.	3.00
"Standard"	2.50
"Champion"	2.25

Robert Wright & Co.

DIRECT IMPORTERS

- 7th prize, \$8. Louis Marx, Covington, Ky.
- 8th prize, \$7. Jonas Long's Sons, Scranton, Pa.
- 9th prize, \$6. Wm. Murray's Son & Co., Altoona, Pa.
- 10th prize, \$4. H. C. Prange Co., Sheboygan, Wis.

We present herewith the advertisement to which the first prize was awarded:

Mr. Macey's full report on the examination was as excellent as it was brief, and read as follows:

In arriving at a decision I have considered each advertisement in the light of the printed conditions issued by you and which govern the test, and have also considered each as to its individual strength in the following respects:

- 1st. The advertisement must receive "Attention."
- 2d. Having attention it must create "Interest."
- 3d. Having the reader's interest it must create "Desire to Buy."
- 4th. Having created the desire to buy it should help "Decision."

5th. It must suggest a Bissell Sweeper as a "Holiday Gift."

6th. It must call attention to "Cyclo-Bearings."

7th. It is desirable to show an "Illustration."

8th. Prospective buyers are always interested in the "Price."

Many of the advertisements are very strong in one or two of the above features, but have no strength in others, and many very excellent advertisements have been rejected on account of failure to conform to one or more of the printed conditions governing the test.

Aluminum in France.

In France the use of aluminum is entering largely into coaches recently built or overhauled, principally to replace brass, copper or iron fixtures on interior work, says the *Railway and Engineering Review*, and it is also being tried in some cases as a substitute for the heavier iron work.

The use of this metal for lamp fixtures and other decorative work in coach interiors would stand some investigation, for it oxidizes slowly, avoiding the necessity of lacquering. It presents a light, strong and comparatively cheap metal, easily manipulated and susceptible of being used to produce a highly decorative effect.

While the pure metal is weak under a compressive stress, it being properly alloyed with nickel, becomes in tensile strength superior to steel in relation to its weight, giving in the cast form from 18,000 to 28,000 pounds per square inch, with an elastic limit of 8,500 to 12,000 pounds; in the form of sheet 35,000 to 50,000 pounds, with an elastic limit of 21,000 to 30,000 pounds, and in the form of bar from 30,000 to 45,000 pounds, with an elastic limit of 19,000 to 25,000 pounds. Under transverse stresses it is not very rigid, but bends rather than breaks. From this it will be inferred that outside of decorative car work its use is limited to rods bearing purely tensile stresses, and in locomotive work its most favorable application would be to dome casings and similar uses. But except in special cases the cost is yet too high for this metal to be introduced to any extent.

The Rise of a Great Industry.

The history of the origin and growth of the great Krupp Works, at Essen, Germany, forms a most remarkable record of individual development. The main particulars are thus given in the *Iron and Coal Trades Review*, of London: The grandfather of the present Krupp started an iron foundry in 1810. For 16 years he barely made a living. In 1826 his son, Alfred, succeeded to the struggles of his father. In 1832 he had only nine men in his employ. He, however, was making good steel and guns. His steel and one or two guns were in the great London Exhibition of 1851, and this brought him instant recognition, and large orders from various governments began to pour in. On January 1 of the present year there were on the pay rolls 41,750 men, of whom over 25,000 were employed in the works at Essen. In 1895 there were in the steel works at Essen over 3000 implements and machines, and 458 steam engines, aggregating 36,561 horse-power. There are over 40 miles of leather belting. In the statistical year 1895-96 over 1,000,000 tons of coal and coke were consumed. The consumption of water is equal to that of Dresden, with its population of 336,000, and more illuminating gas is used than in that city. There are 50 miles of railroad track on the premises, with 36 locomotives and 1300 freight cars. There are 522 telephones.

Smith—Is your new clerk a good man?

Jones—Never saw his equal; he works just like a charm.

Smith—But I was under the impression that charms seldom work.

Jones—Well, you heard what I said.—*Chicago Record*.

REVIEW OF THE MARKETS.

Hardware: The weather is favorable at present for an early opening of Spring trade. Few changes in price are occurring of any moment, and quotations generally are held much more steadily in consequence. Let us hope we have reached a satisfactory stage, where the dealer can make a price when requested which will hold for a day or two without discussion. The probability is that the action taken by the various conventions throughout the country will have a tendency to keep quotations from the manufacturers, in harmony with the views as expressed. This will make unnecessary more or less conflicting complaints, which are apt to worry the retailers as well as the jobbers. The lack of friction which such an action would show would be advantageous all around.

Wire Nails: A fairly satisfactory business is being done in this important staple, and as no change in price has influenced the market, the demand is a steady one, which will increase as the weeks go by. Manufacturers' quotations are firm, and remain as follows: f. o. b. Pittsburgh; terms, 30 days, 1 per cent. off in ten days:

To jobbers in carload lots.....	\$3.20
To " in less than carload lots	3.22½
To retailers in carload lots.....	3.35
To " in less than carload lots	3.45

In New York City the demand is nominal, and manufacturers' prices remain without change. Quotations are as follows:

To retailers, carload lots on dock.....	\$3.53
" less than carloads on dock	\$3.66
Small lots from store.....	\$3.60 to 3.75

Cut Nails: The market on cut nails is without any change, although one was anticipated at the recent meeting of the manufacturers. The demand is considered fairly good, and quotations remain as previously quoted, f. o. b. Pittsburgh; terms, 30 days, 1 per cent. off in ten days:

1000 kegs and over.....	\$2.50
In carload lots	\$3.55
To jobbers in less than carload lots.....	2.60
To retailers "	2.70

New York prices remain as follows, with business fair:

To jobbers in carloads on dock	\$2.73
" in less than carloads on dock.....	2.78
To retailers "	2.90
Small lots from store.....	\$2.90 to 2.95

Barb Wire: As was anticipated, the lessened demand from the agricultural consumers makes the quantity of barb wire marketed at the present time show considerably less in volume when comparisons are made with previous seasons. The present month is usually the busiest the factories find in the production of their product, as it is natural to expect rush orders to ship even at dates earlier than mentioned in the specifications. But at the present time no such difficulty seems to affect deliveries. The market, however, remains firm, the quotations being as follows: f. o. b. Pittsburgh; terms, 30 days, or 1 per cent. off in ten days:

To jobbers in carload lots, Painted	\$3.65
" " Galvanized	3.80
" in less than carload lots, Painted.....	3.07½
" " Galvanized	3.82½
To retailers in carload lots, Painted.....	3.80
" " Galvanized	3.95
" in less than carload lots, Painted.....	3.90
" " Galvanized.....	4.05

Smooth Wire: The smooth wire market continues as noted in our recent issue, the demand being a steady and satisfactory one, and prices remaining the same. The following quotations show the market, f. o. b. Pittsburgh, terms thirty days, or 1 per cent. off in ten days:

To jobbers in carload lots.....	\$3.05
To " in less than carload lots.....	3.07½
To retailers in carload lots.....	3.20
To " in less than carload lots.....	3.30

The charge for galvanizing is 50 cents on sizes from 6 to 14 inclusive; on Nos. 15 and 16, 85 cents, and on Nos. 17 and 18, \$1.10.

Toe Calks: Under date of March 1st, the previous quotations are withdrawn by the R. I. Perkins Horse Shoe Co., Providence, R. I., and present prices are announced as

follows: Perkins Toe Calks, 5 cents per pound for blunt and 5½ cents per pound for sharp. Terms f. o. b. mill Valley Falls, R. I., subject to a discount of 1 per cent. for cash in ten days.

Shot: Under date of March 5th the following advanced prices on shot are announced by the Eastern manufacturers, terms net cash 30 days or 2 per cent. discount for cash in ten days with the usual abatement of 40 cents per 100 pounds on ton lots.

	Per bag.
Drop Shot, sizes smaller than B. 25-pound bags	\$1.50
Drop Shot, B and larger sizes, 25-pound bags.....	1.75
Buck Shot, 25-pound bags	1.75
Chilled Shot, 25-pound bags	1.75
Dust Shot, 25-pound bags	2.10

Cordage: The cordage market still remains at the previous quotations, no changes being noted. For carload lots they are as follows, with an advance of a quarter of a cent for less quantities, f. o. b. New York, Boston or Philadelphia:

Manila, 7-16 inch and larger.....per pound, 15½ cents.	
" ¾ inch	16
" ½ and 5-16 inch	16½
Sisal, 7-16 inch and larger.....	10½
" ¾ inch	11
" ½ and 5-16 inch	11½
" Lath Yarn	10

Manila Tarred Rope, 15-thread, 15½ cents. Manila Hay Rope, medium, 15½ cents. "A" grade of Jute Rope 7½; "C" grade 7 cents. Jute Wool Twine, 4 ply only, per pound, 7 cents; all other sizes, 7½ cents.

THE CLEVELAND TRADE.

The alarm lest the "infant industries" of the Sugar and Tobacco Trust were to be destroyed by importations from Puerto Rico has subsided. The action of Congress will probably be accepted by Puerto Rico, as it provides a revenue to aid them in their serious financial condition. It would have pleased a majority of the people better if they had followed the recommendations of the President. The importance of the action of the Government towards Puerto Rico was intensified by our annoying relation toward Cuba, which was caused by the same demagoguery that forced the country into war.

It is easy to realize the great advantage to Cuba of exchanging a partnership with Spain for one with this country, yet we are placed in the anomalous condition of advising independence in place of annexation. That will only delay the prosperity of the Island and cost us dearly for small statesmanship.

No country should seek extension unless it is prepared to give the full benefit of its government to the new territory. England never succeeded in colonizing until she learned this lesson through her mistaken policy with this country.

Trade is not booming, but is quite as good as could be anticipated, and every indication points to continued prosperity.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE ST. PAUL TRADE.

Business, during the month of February, has been somewhat interrupted by the conventions of the several State Hardware associations of the Northwest. The associations of Minnesota, North Dakota, Iowa and Wisconsin have been in session at different dates during the month, and have been generally attended by the progressive and "up-to-date" dealers, who feel it to be to their interest to put off for a few days the pleasure of entertaining the traveling salesmen at their stores for the privilege of visiting with their fellow merchants, and learning from them the method employed by them to overcome the many difficulties encountered in business; also any new plans that might be adopted to make the Hardware business a greater success than it now is. We believe this is a very wise thing for the retail dealer to do, and the time and money is well spent that is found necessary to support the organization. If we have brains enough to carry on a reasonably successful business, we can always learn something that would be of benefit to us from others who are in the same line of business, and

We have it. Do you need it?

JAP-A-LAC
New Wood Finish

For Floors, Interior Wood-work, etc.
"WEARS LIKE IRON."

It makes old Floors, Front Doors, Wood-work, Oil Cloth, Linoleum and Furniture look like new. It produces a smooth, hard, brilliant finish, and is as lasting as Japanese Lacquer. Samples of finished wood showing the following colors mailed free: Oak, Walnut, Drab, Malachite Green, Ox Blood Red, Spruce, Cherry, Mahogany, Black, Yellow, Ivory and Natural.

Write for our prices and dealers' discount.

The Glidden Varnish Co., Cleveland, Ohio, U. S. A.

we also can as well give out something from our experience that will help them.

It was the privilege of the writer to attend the convention of the Minnesota Association held in Duluth, and he takes pleasure in testifying to the ability shown in conducting the meeting. The papers read were full of good suggestions, which, no doubt, will be largely adopted. Rival dealers in the same town were brought nearer together, and made to see that rivalry did not pay when carried to the extent of cutting out the profits in order to get the other fellow's business. On the other hand, plans were laid that will result in friendly relations between these dealers, and, consequently, better profits in the future.

The Association is in good shape, and is doing good work.

The "cold snap" that we experienced the last of February is now over, and Spring weather seems to be with us. Business has very much improved within the last few days. We have met many of our customers from different localities through the Northwest during the last month, and they are, without exception, looking forward to a good year's business. In this city, and throughout the tributary country, there is the promise of extensive building operations. Expansion is in the air. It is coming in various forms, and no amount of pessimistic howling can prevent it.

C. W. HACKETT HARDWARE CO.

Advertisers' Corner.

Newspaper circulation is increasing far more rapidly than population.

Every advertisement that accomplishes its object is a good advertisement.

The more words in the ad., the less will the reader remember.—*Printers' Ink.*

The million general circulation may be valueless to the man who wants a particular thousand.

It is not the amount of money spent, but how it is spent, that makes the success in advertising.—*Printers' Ink.*

Instructor—You are wasting your time here. You will never learn to draw.

Art Student—That's all right. I'm going to be a poster artist.—*N. Y. Journal.*

Positive, forceful advertising is the kind that pays. The ad. that makes a clean, definite proposition about something in particular is the ad. that makes the best and deepest impression.—*Printers' Ink.*

"What is Penjerk doing in the writing line just now?"
"Fiction."
"Writing a novel, eh?"
"No; he is ad. writer for Firesale & Snidest, the cheap clothiers."—*Exchange.*

The only time when adjectives should be used is when they are needed to bring out the sense, and they are needed for this purpose only when the nouns are not sufficiently definite. If adjectives are not needed to bring out the sense, but are added to express more fully what is already stated, the style is loaded with verbiage, and the mental activity of the reader is repressed.—*Profitable Advertising.*

Senior partner-- Where's der office poy?

Junior partner—I shoost fired him. He orter be in Sing Sing. He led two postage stambs ged stug togedder und dere vas a dead loss of—

Senior partner—Two cends. Merciful Rachel! two cends.

Junior partner—Even vorse dan dat. I dried to get dem apart und shpoilt both of dem. (Both faint.)—*Exchange.*

Whatever you do, beware of humorous advertising. The man who wants to buy an overcoat wants an overcoat and not a joke. You can never convince him that your coats are as good as your jokes, no matter how good your joke may be. Simply say as earnestly and solemnly as you can: "I have good overcoats for sale cheap." That is what the overcoat buyer wants to know. You may lead up to this statement as attractively as you choose, but that statement wants to stand out more distinctly than any other part of your advertisement.—*N. Y. Evening Journal.*

Don't be a "position crank." Some advertisers think so much about the particular spot in the newspaper in which their ads. are to appear that they don't seem to have time for anything else. They seem to believe that if they can get good position for their ads. that is all they need to think about. Of course, good position is a good thing, but don't think too much about it, and don't pay exorbitant prices for it. Make your ads. interesting and trade-pulling. Then they will be seen and read wherever they are, and they will bring business, even if they are in the most obscure and out-of-the-way position in the whole paper.—*Dry Goods Chronicle.*

One of the great faults of the amateur and occasional advertiser is summed up in the word "smattering." Instead of making a stand and concentrating his force, he cannot resist the temptation to dabble in everything that offers. The result is that, instead of making a wholesome impression on a limited number of people, he makes a very weak impression, if any at all, among a great number. It would be much better for his pocket to educate a hundred people thoroughly as to what he has than to give ten thousand a mere smattering of his business. Where one has a limited appropriation for advertising, results will be better, nine times in ten, by concentrating this upon a particular point and endeavoring to capture that before attacking the entire field.—*Business Journal.*

A Motor Vehicle Defined.

At an English police court recently Captain Herve H. A. Errington Josse, of Norman Villa, Bargate, Grimsby, was summoned by the Inland Revenue for keeping a carriage without a license. The question raised was whether a vehicle consisting of a car attached to a motor cycle was one carriage or two. If it was considered as one the maximum traveling speed allowed would be twelve miles, and if as two, six miles per hour. The magistrates decided it was one vehicle, and imposed a fine of one guinea.—*Automobile Magazine.*

Parent—The young man who visited you last night was a Hardware manufacturer, wasn't he?

Edith—Gracious! No, indeed. What made you think that?

Parent—He made a bolt for the front door last night when he saw me.—*Exchange.*

Salesmen Wanted.

COMMISSION SALESMAN.—A salesman wanted to sell a line of builders' Hardware on commission in any of the following territory: New England, New York and New Jersey. One with experience preferred. Good line; splendid opportunity for right man; can take as a side line. Address, MANUFACTURER, care HARDWARE, No. 143 Chambers Street, New York. 48

COMMISSION SALESMAN, now on the road, to sell snaps, chains, dog collars, razor straps and sundry specialties on commission. Name territory and references. IRA F. WHITE & SON, No. 76 Park Place, New York. 50

Situations Wanted.

CATALOGUE COMPILER—Large corporations and manufacturers find it very profitable to employ a catalogue compiler and press agent to boom their business. Position of this kind desired by CLARKE, No. 2523 Eighth Avenue, New York City. 47

EXPERIENCED SALESMAN; traveled the States of Virginia, Maryland and District of Columbia for 25 years, is open for engagement. Commission preferred. Best of reference. Address, BUCK, No. 1719 E. Eager Street, Baltimore, Md. 45

SALESMAN—Wanted position as salesman, assistant buyer and manager in wholesale or retail Hardware house, where good future is assured to right party. Address, HUSTLER, care HARDWARE, No. 143 Chambers Street, New York. 46

Location Wanted.

FOR A NEW HARDWARE STORE (iron and farm tools not objectionable) in the middle west or south. Prefer a manufacturing city of 25,000 or more that has bright prospects ahead. Any information from a jobber, manufacturer or salesman will be properly appreciated. Have a good stock and fixtures ready to move if right location is found. Would buy a store with a small stock if necessary, but prefer to use our own, if equally advantageous. Address, N. E. N., care HARDWARE, No. 143 Chambers Street, New York. 49

An Electric Fog Horn.

An electric fog horn has been invented by a Canadian electrical engineer. Three pairs of electro-magnets operate half a dozen clappers, which strike against a large gong with the frequency of about 36,000 strokes to a minute, producing an almost continuous sound. Its effectiveness is enhanced by a mechanism on the principle of a megaphone, by means of which the sound is intensified and thrown in the required direction. The sound from a small model was heard a distance of two miles.—*American Exporter.*

Customer: Have you the same razor you shaved me with two days ago?

Barber (flattered): Yes, sir; the same identical one.

Customer: Then chloroform me first, please.—*Ex.*

YOUNGSTOWN SPECIALTY MFG. CO., Youngstown, Ohio.

Acetylene.

From a recent issue of a contemporary, we subtract a few notes on "The Romantic History of the New Illuminant," meaning, of course, acetylene. "The Special Commissioner" of the paper in question, whose knowledge must by this time be as colossal as it is varied, is happy in his power to make interesting subjects which have hitherto been regarded by the general public as "dry," and the article in question is no exception. It is over sixty years since Edmund Davy showed the Dublin Royal Society of Chemists of his day that when a mixture of calcined tartar and charcoal was heated in an iron bottle there was often produced a black substance which, when dissolved in water, liberated the gas—then called bicarbonate of hydrogen, and now known as acetylene.

Its suitability as a brilliant illuminant was also pointed out, provided it could be produced cheaply. Matters, however, remained dormant for just fifty years, when Sir William Siemens introduced the furnace in which the electric arc was used to obtain intense heat; and amongst the uses to which this invention was turned was the production of aluminum, and in this process large quantities of carbide of calcium were made accidentally by the action of the great heat on the lime and carbon lining of the furnace. During the years 1886 and 1887 the lads employed at the works used to amuse themselves during their dinner hours by pouring water on the old crucible linings and lighting the gas which was thus liberated. No one, however, attached any commercial importance to the knowledge, and some years elapsed without any attempt to turn the gas to practical account. In 1892, an American, Mr. Wilson, having failed in his experiments to make aluminum bronze, tried to reduce lime with carbon, and thereby obtained calcic carbide. The discovery got noised abroad, and those who should know agree that the honor of showing the road to the practical application of the wonderful gas belongs to Wilson. In 1895 not 100 h. p. in all the world was being used in connection with the production of acetylene, whereas, in Europe alone, at the beginning of 1899, 35,000 h. p. was at work; and it is expected that very soon the resources will be such that the production of carbide will be at the rate of 20,000 tons per annum. The process, though highly technical, may be outlined simply enough. Lime and hard coke of the highest degree of purity are

employed—100 parts of lime to 68 parts of coke and about 1.8 pound of this mixture yield 1 pound of carbide. It is curious that lime of sufficient purity for the purpose is difficult to obtain in large quantities, and is very costly. The lime and coke are put into a crucible, and under the intense heat the raw material is gradually transformed into an ingot of carbide. When the ingot is complete the crucible is withdrawn from the furnace and another substituted. Some part of the lime and carbon is incompletely reduced, and forms as a crust on the outside of the ingot. This is not so fertile in producing gas as the material within. By another process the lime and carbon are heated to liquefaction, and the crucible is tapped at short intervals. There is no unreduced material here, and the process is simpler and less costly; but, on the other hand, the output of carbide is less. From this carbide the acetylene gas is produced, and in the simplest way—by the application of water. Carbide can be kept quite safely so long as it is in a perfectly dry state, but the presence of moisture leads to the evolution of gas. There is something almost uncanny in the production of the gas by the application of a jet of water; but science performs many miracles and this is one. On the present scale acetylene will not rival gas or electricity for general purposes; but it can be used wherever ordinary gas installations are not available, or can only be laid down at a cost for plant and working expenses out of proportion to the possible return. For lighting churches, factories, stations, country houses and other buildings, as well as villages and small communities, where coal gas is not available or profitable, it is both handy, simple and effective; it can be used in floating buoys, bicycle and carriage lamps, table lamps, magic lanterns, photography, and in carriages on the Prussian railways it has been used successfully to enrich oil gas for lighting. In tram cars and buses what would we, who know the wretched oil lamp, give for the acetylene substitute? The brilliancy and purity of its light forbid the assumption that it can be allowed to go unused; and those associated with its production confidently believe that it must have a future as brilliant as the flame itself.—*Ironmonger*.

"Mr. and Mrs. Dinkelspiel have invited us to their silver wedding," said Mrs. Larkin to her husband.

"Isn't it a German silver wedding?" asked Mr. Larkin.—*Detroit Free Press*.

AT THE TRAPS OR IN THE FIELD

Laflin & Rand Smokeless Powder will give a better pattern with the same velocity than any other powder made. Further than this you can always depend on its being just the same; hot or cold, wet or dry and in any climate. We guarantee this and invite tests. HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Beverly, Mass.—A new Hardware store is to be opened in Rogers' block by John A. Ober and J. Augustus Woodward.

Danville, Va.—In the clerk's office of the Corporation Court a charter has been entered incorporating the Piedmont Hardware Co. This concern has formerly done business under a charter in the name of Traylor, Peterson & Motley.

Fayetteville, Tenn.—West & McKenzie is the style of a new Hardware firm in this town. The firm is composed of W. C. West and W. D. McKenzie.

Fort Plain, N. Y.—The Williams & Tanner Co. has been incorporated to deal in Hardware. Capital, \$60,000. Directors—J. H. Williams, of Brooklyn, and Alonzo E. Tanner and C. E. Parry, of Fort Plain.

Glenville, O.—About April 1 John C. Cone, as manager, will open a modern, up-to-date Hardware store in the new Coffin block. Mr. Cone will carry a full line of Hardware, house furnishings and saddlery.

Groveton, N. H.—Walter G. Pierce has opened his Hardware store in F. G. Giberson's block.

Newberry, S. C.—The Newberry Hardware Co. has been organized.

Port Angeles, Wash.—The Port Angeles Hardware Co. has been incorporated. Capital, \$5000. Incorporators: C. E. Russell, C. A. Griggs, J. Gutenberg.

Sherman, Tex.—The Secretary of State has filed the charter of the Walsh Hardware Co. Capital stock, \$50,000.

Silver Creek, N. Y.—F. J. Killoway and H. R. Shattuck have formed a copartnership, and will open a Hardware store in Killoway's new brick block as soon as they can get their stock arranged.

Sioux City, Iowa.—The Orcutt Co. has been incorporated to do a Hardware business. Capital, \$22,500. Incorporators: W. W. Orcutt, W. M. Orcutt, R. W. Orcutt.

Smithsburg, Md.—Keller H. Beard will engage in the Hardware business with his brother, Preston H. Beard.

Tampa, Fla.—The notice of incorporation of the Tampa Hardware Co. has been filed. The company is composed of a number of Valdosta capitalists, S. L. Varnadoe, president; W. C. Thomas, general manager. They propose to enter the field and do a large wholesale business.

Changes and Improvements.

Albion, Mich.—The Austin & Smith Hardware stock, owned by H. D. Smith and the Chas. Austin estate, has been sold to Stephen Welling, of Detroit and Geo. P. Griffin, of Mason. The retiring firm has been established nineteen years.

Bangor, Me.—Franklin E. Bragg, son of Hon. Charles F. Bragg, has been admitted to the firm of N. H. Bragg & Sons, dealers in iron, steel and Hardware at No. 78 Broad Street.

Bloomington, Ill.—Plans have been prepared for the remodeling of the rear portion of the Hardware store of G. H. Read & Bros., in the Eagle block. There are three rooms, as the place is situated now, and they will all be converged into one large and commodious apartment.

Bristol, Tenn.—J. M. Barker & Co., wholesale Hardware dealers, have moved into the handsome property recently completed on the lot adjoining their old stand.

Columbiana, Ohio.—Harvey Keller, late clerk in Greenamyer's store, has bought out the interest of John E. Allen in the Hardware department.

Derry, N. H.—Fred S. Pillsbury, who recently sold his Hardware business to May & Neal, has bought a similar business in Watertown, Mass., and commenced trade there.

Des Moines, Iowa.—Plans are forming for the re-engagement of the Luthe Bros. in the Hardware business. They have been located at Second and Walnut Street with Alderman Patrick as one of the firm, but that concern has been dissolved, Mr. Patrick retiring. The Luthes contemplate the erection of a four-story building for use as a Hardware emporium.

Ellsworth, Me.—P. H. Stratton, who recently disposed of his Hardware stock here, has purchased a similar establishment in Cambridge, Mass.

Findlay, Ohio.—C. F. Spice, of the firm of Spice & Latchaw, Hardware dealers, has sold his interest to I. N. Latchaw. The firm will now be known as Latchaw Bros.

Hackettstown, N. J.—A. W. Trimmer, of this place, and Wm. Hoffman, of Somerville, have purchased H. H. Van Duzer's Hardware business and removed it to the Trimmer building.

Harriman, Tenn.—W. J. Griffith, of Oliver Springs, has bought the Daniel Denny stock of Hardware and groceries.

Jacksonville, Fla.—W. A. Morrison has sold his large Hardware business to a syndicate of business men from Valdosta, Ga.

Kosse, Texas.—T. N. Williams, of the Hardware firm of Robertson & Williams, has sold his interest to J. B. Gibbs, of the Merchants' & Farmers' Bank of Kosse.

Moundsville, W. Va.—The firm of Echols, Bros. & Co. have sold their Hardware business on Second Street to the Kerr Mfg. Co. of Martin's Ferry.

Nashua, N. H.—The John H. Clark Hardware stock has been sold by John P. Goggin to the Barr Hardware Co., of this city.

Odell, Ill.—Frank Raisbeck, Hardware and implement dealer, who recently bought out the furniture store of Scott & Goss has made some additions to the firm. The new members of the firm are Geo. H. Fries and E. S. Pfau. The new concern will be known as Frank Raisbeck & Co.

Poughkeepsie, N. Y.—Charles E. Schou will move his extensive Hardware store from the present location to the store No.

273 Main Street, which has been practically vacant for some time. He will occupy the second floor, and will build an addition in the rear, so that he will have increased facilities for doing business.

Prairie Depot, Ohio.—Dern & Son, Hardware dealers, will commence at once the erection of a fine brick building on the lot purchased of C. S. Strong recently.

Santa Rosa, Cal.—The well-known Hardware establishment of C. E. Haven & Co. has been dissolved, as John F. Wulzen, of San Francisco, the silent partner, has sold his entire interest to Mr. Haven, who will henceforward conduct the business.

Wellston, Ohio.—A new warehouse is being built for E. E. Donaldson, the Hardware man.

Windsor Locks, Conn.—James D. Phelps, who has been confidential clerk at F. S. Bidwell's Hardware and lumber establishment, has been admitted into partnership with Mr. Bidwell. The new firm will be known as F. S. Bidwell & Co.

Business Embarrassments

Detroit, Mich.—F. B. Phillips & Co., dealers in Hardware on Water Street, have filed a chattel mortgage to George W. Ames, as trustee.

Fort Smith, Ark.—W. C. Baker, dealer in harness, saddles and Hardware, has filed a voluntary petition in bankruptcy.

Larwill, Ind.—Lewis H. Clevenger, Hardware dealer, has filed a petition in bankruptcy. Liabilities, \$1331; assets, \$1600.

Burglaries in Hardware Stores.

Chicago, Ill.—Lenham Hardware Co., cutlery.

Sayre, N. Y.—Bolich Bros., \$100.

Fires in Hardware Stores.

Atlantic City, N. J.—A lamp exploding in the Hardware store of Shepherd & Hackney set fire to the building, which, with its contents, was destroyed.

Bardstown, Ky.—The Hardware stock of M. S. Hart has been damaged by fire.

Bourbon, Ind.—The Hardware stock of Charles New has been destroyed by fire.

Bowdle, S. D.—H. A. Mason's Hardware store has been burned.

Carlton, Mich.—Geierman Bros. Hardware stock has been destroyed by fire. Fully insured.

Cleveland, Ohio.—The Hardware store of George Berg, No. 543 Central Avenue, has been damaged by fire.

Davisburg, Mich.—The Hardware store of P. A. Wright & Co. has been destroyed by fire. Loss, \$6000; insurance, \$2500.

Decatur, Ala.—Collier & Son's Hardware stock has been destroyed by fire.

Lowell, Mass.—Fire in the store of Rollins & Anson, Hardware, in Miller's block, Bridge Street, has caused about \$1000 damages.

Mound City, Ill.—W. W. Hough's Hardware stock has been destroyed by fire.

Springfield, Minn.—Runck & Helmann's Hardware store has been destroyed by fire.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, over the country are requested to contribute to this page news of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Etc.

Cincinnati, Ohio.—The Peters Arms & Sporting Goods Co., capitalized at \$100,000, has been incorporated by S. M. Peters, O. E. Peters, J. H. McKibben and F. C. Tuttle. This is a reorganization of the Third Street sporting goods manufacturing firm.

Flint, Mich.—D. T. Stone and Irving Bates have formed a company for the manufacture of paints.

Holyoke, Mass.—Certificates of incorporation have been filed by The Barlow Mfg. Co. to manufacture metal fixtures. Capital, \$15,000. J. S. Webber, president; S. E. Bellows, treasurer.

Jersey City, N. J.—The Columbian Automatic Computing Scales Co. has been incorporated. Manufacturing automatic computing scales. Capital, \$125,000. Incorporators: M. L. Welfey, W. F. Hummer, C. F. Christopher, D. K. Jackson, E. H. Jackson.

Kansas City, Mo.—The Gate City Roofing & Metal Co. have filed articles of incorporation. The capital stock is \$20,000. The stockholders are Frank L. Wishon, Thomas J. Harrison, Charles J. Robinson and W. B. Teasdale.

Le Roy, N. Y.—F. W. Miller is about to start a factory for the manufacture of agricultural implements at Caledonia.

Little Valley, N. Y.—Case Bros. Cutlery Co. has been incorporated. Manufacturing cutlery. Capital, \$30,000. Incorporators: J. Case, J. D. Case, A. J. Case, W. R. Case, J. Booth, E. J. Case, all of Little Valley.

New Freedom, Pa.—The big \$100,000 wire cloth factory is an assured fact. Ground has been staked off for the main building, which is to be 162 x 133 feet, and ground is being excavated preparatory to putting in the foundations. In addition there will be five other buildings in connection with the plant. At a meeting of the stockholders a permanent organization was made, and Arthur S. Norrish was elected president; Aaron Peeling, secretary, and P. O. Klinefelter, treasurer, and the following directors chosen: Arthur S. Norrish, W. F. Kintzing, J. S. Freeland, Arthur N. Hetrick and W. H. Burnham. The company will apply for a charter.

Pittsburgh, Pa.—The Stephenson Mfg. Co. has been formed by Robert S. Stephenson and John C. Bash, both formerly of Baldwin & Graham, and F. Marion Love, with a capital of \$50,000, to manufacture gas stoves and gas appliances, including instantaneous water heaters. The company will operate an assembling plant on Sandusky Street, Allegheny, and will enter extensively into the stove business of Western Pennsylvania. Mr. Stephenson will be president and Mr. Bash secretary and treasurer.

Providence, R. I.—The Crowell & Worthington Co. has been incorporated. Manufacturing and dealing in Hardware. Capital, \$100,000. Incorporators: J. Tiffany, W. A. Morgan, H. P. Crowell, J. E. Worthington.

San Diego, Cal.—Articles of incorporation of the Pacific Coast Broom Co. have been filed at the county clerk's office. Capital stock, \$25,000.

St. Paul, Minn.—The White Enamel Refrigerator Co. have filed articles of incorporation. Capital stock, \$60,000, with incorporators H. G. Fischbein, Gebhard Bohn and Gebhard C. Bohn.

York, Pa.—The Hallock Weeder & Cultivator Co. has been incorporated to make agricultural implements. Capital, \$200,000.

Changes and Improvements.

Cincinnati, Ohio.—A deal was completed recently by which the Peters Arms & Sporting Goods Co. secures possession of the six-story building on the south side of Fifth Street—No. 19 East—known as the Wehrmann Building, for a period of three years, at an annual rental of \$3000.

Denver, Col.—The Great Western Pneumatic Tool Co. has closed a contract by which it takes possession of the entire lower floor of the John Mouat Lumber Co.'s establishment at Twenty-sixth and Blake Streets.

Granite City, Ill.—The Continental Wire Works Co., located here, has been purchased by the American Steel & Wire Co., of New Jersey, for \$148,000.

Kokomo, Ind.—G. M. Trautman, formerly with the Globe Steel Range Works, has associated himself with Terre Haute capital, and will establish stove works at Greensburg.

Lebanon, Pa.—Frank Buchman, of Pittsburgh, has purchased the old stove factory's foundry on North Eighth Street, near the P. & R. Railway station.

Mount Vernon, Ill.—The new factory of Hartwell & Bros., late of Vincennes, Ind., which has been located in this city, has been put in operation. The plant manufactures axe and pick handles.

New Haven, Conn.—The Marlin Fire Arms Co. have just equipped their factory with an electric lighting and power plant, which is one of the largest of the kind in the State. The entire factory, with the exception of the barrel room, is now run by electricity, furnished by three large motors. The barrel room will probably be altered within a few months, so that, too, can be run by electric power.

Oakland, Cal.—The Pacific Wire & Nail Works has announced that it will reopen its plant at the foot of Market Street after a cessation of business for about six years.

Ottawa, Can.—A deal has been effected between F. Outram, of the Globe File Co., Port Hope, and the Ottawa Saw Co., by which the Globe File Co. become owners of the file manufacturing plant of the Ottawa Saw Works. The plant will be removed to

Port Hope, where it will be operated in connection with the Globe File Works.

Pekin, Ill.—W. H. Binian, president of the Acme Harvester Works, has purchased the plant of the Harvester King Mfg. Co., at Harvey, Ill.

Shamokin, Pa.—The Weatherwax Mfg. Co. will locate here and build a plant to employ 100 skilled hands in the manufacture of locks and hinges. It now has a plant in Bloomsburg, but cannot get sufficient skilled labor there.

Warren, Pa.—The Warren Axe & Tool Co. have decided to rebuild their plant recently destroyed by fire, on the same site and with double the capacity.

Worcester, Mass.—Arrangements have been made at the works of the Harrington & Richardson Arms Co. for the manufacture of guns. The company has secured patents for a device to throw shells, and this will be used in the guns. The company does not intend to make a very elaborate firearm, and the style adopted is a single-barrel gun that will sell for about \$10.

Recent Fires.

Denver, Col.—Fire has destroyed the four-story building at Nos. 1535 to 1539 Wazee Street, occupied by the Kansas-Moline Plow Co.

Lockport, N. Y.—Fire has destroyed the rear portion of the Cocker Saw Factory. The damage was heavy, but the amount has not yet been determined.

The Blount Door Check

is described in a monthly bulletin of good things
issued by a prominent hardware firm as follows:

"In the light of much knowing of many such devices, we deliberately here and now state, that the Blount Door Check is the *only perfect one* at present correcting man's tendency to leave the door ajar. 'Tis practically all in one piece, is simple, positive in action, wont get out of order—in short, it is "far and away" the best door doctor extant."

On request we furnish to the Hardware Trade attractive folders descriptive of the device and bearing the name and address of the Dealer. The name of this Company does not appear upon them.

THE
**ELECTRIC
DROP STEEL
FENCE
RATCHET.**

Absolute Satisfaction Guaranteed.

THIRTEEN REASONS

Why the Electric Drop Steel Ratchet should commend itself to you.

(Thirteen is a lucky number you know.)

- 1st. It is simplest.
- 2nd. It is the lightest and strongest.
- 3rd. It is the most compact and rigid; no loose parts.
- 4th. Will tighten any length of wire desired.
- 5th. Adjustable to expansion and contraction.
- 6th. Can be attached to any point on the wire.
- 7th. It will tighten the wire uniformly because it draws equally from each way.
- 8th. Can also be used as a post ratchet by attaching a wire loop in the end to encircle the post.
- 9th. Can be used on any kind of post, either wood or iron.
- 10th. No extra expense in preparing posts, which is necessary when post ratchets are used.
- 11th. When wire becomes loose or sags from use, it can be instantly tightened.
- 12th. No special wrench required; any wrench on the farm will operate it.
- 13th. The most important feature; it can be bought for Less Money than any other good ratchet on the market.

IMPLEMENT TRADE SALESMAN.—Salesman calling on store or implement trade to sell side line. Call or write GRANITE STATE EVAPORATOR CO., Van Rensselaer Island, Albany, N. Y. 73

NEW ARTICLE.—Salesman calling on Hardware trade to sell entirely new article, on commission, as a side line. Address HANDY LADDER WORKS, Cleveland, Ohio. 8

WIRE FENCE SPECIALTIES.—Salesman wanted, to carry as side line, our line of wire fence specialties. Small articles. Sell to Hardware trade. Liberal commission. Address W. H. MASON & CO., Leesburg, Ohio. 16

A Business Opportunity.

ENERGETIC MAN.—An energetic man can purchase or take half interest in good paying Hardware business located in Hudson Co., N. J. For particulars, etc., address H. G., P. O. Box 2383, New York City. 1

NEW HARDWARE STORE.—An experienced man, with sufficient capital to open a Hardware, housefurnishing and implement store, with plumbing and gas-fitting; in the best railroad and river town in Western Pennsylvania. No competition. Large population, and extensive country trade. Natural gas. Paved streets, city water, etc. Needs the store to supply the large, growing demand. Address S. MORGAN, Freedom, Pa. 32

Hardware Stores for Sale.

CUTLERY AND HARDWARE STORE, established 60 years in Philadelphia. Clean, salable stock; good fixtures; unequalled trade and facilities for doing cutlery jobbing. Address, FOR SALE, care HARDWARE, No. 143 Chambers Street, New York. 38

GRISWOLD, MALONEY & CO., Hardware dealers, Elmira, N. Y., offer their long-established (35 years) and profitable business for sale on favorable terms. The store is in perfect running order, and has an excellent trade with the leading builders, manufacturers and country merchants. The stock will inventory from \$22,000 to \$26,000, and can be quickly reduced to \$15,000 or less if desired. Correspondence solicited only from parties having capital and ready to buy. 43

HARDWARE STORE for sale, with or without the stock. Address R. S. B., Box 68, Sodus Centre, N. Y. 30

Wanted to Purchase.

WANTED TO PURCHASE an interest in a retail Hardware store, with moderate sized stock, in good condition and doing a good business. Location should be good, in a fast-growing town. Give reason for selling. Address, John R. Swartz, Hughesville, Pa. 42

Agency Wanted.

AGENCIES WANTED.—Representing manufacturers of Hardware specialties in Cleveland and Northern Ohio. Address, GEORGE CLIFFORD MORGAN, Manufacturers' Agent, Cleveland, Ohio. 7

Agency Offered.

AGENTS WANTED.—Wanted agents to handle a patented, labor saving device of universal sale; investigation solicited by men who desire quick returns from a legitimate, profitable business. Address (C) BURR MFG. CO., Cleveland, O., 823 Society for Savings. 2

LIVE HARDWAREMEN.—We would like to hear immediately from a few live Hardwaremen who would like to be sole representatives in their towns, of a concern that is in the market for business, and have a line made for "men now on earth"—a modern line THAT CAN BE SOLD to your customers. Address "Box 88," care HARDWARE, No. 143 Chambers Street, New York. 2

Attention, Manufacturers!

MANUFACTURERS making articles for export can find good market by addressing JOSEPH NEUBURG, Room 535, No. 150 Nassau Street, New York. 4.

**IMPROVED
YOUNG AMERICA SCALE.**

It is Made of Steel. White Tile Top. Tin or
Brass Scoop Top. Brass Dial.

BEST IN THE WORLD.

A most beautiful and attractive scale for all purposes. Beautifully enameled, ornamented and striped. Weighs 20 pounds by ounces. Occupies but little space. Is light and easily moved. It can be regulated by turning the brass screw on top. It is always ready and easily understood. It is a convenient scale to use and has no weights that may be lost. You can look this one in the face to prove its accuracy without looking for weights. Every scale examined before leaving the factory and warranted correct.

**CARY'S PATENT
HINGE
AND
HASP**

Designed Especially for

Fruit Crates, Milk,
Egg, Cracker and
other styles of
Boxes, requiring a
hinged cover.

CARY MFG. CO.,

19-21 Roosevelt St.,
NEW YORK.

SAMPLES
BY MAIL.

IN our patent loop joint hinge, one part of the loop is made rigid to one-half of the hinge, making the strongest, neatest and best hinge for the purposes mentioned.

Our patent fastening plate and catch which go with the hasp are so perfect in their construction that the catch never gets loose from the plate, as is often the case with others on the market.

When desired, we furnish our hasp and catch with a small hole through each, so that a wire can be inserted and then sealed by use of a lead seal.

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

IF YOU WANT TO KNOW ASK US

How to file Catalogues, quotations and every class of data, with no more trouble to file than to throw in the waste basket, and as easy to get when wanted as though in your vest pocket.

FOLDING PAPER BOX CO., South Bend, Ind.

"GIVE YOU YOUR MONEY'S WORTH."

Coldwell Lawn Mower Co., Newburgh, N. Y. [*Lawn Mowers*]: We think HARDWARE is enterprising, pushing, up-to-date, so to speak, and has a certain amount of get-up-and-get spirit about it, combined with a certain flavor of "I give you your money's worth when you advertise with us," that we like it—not for fun or sentiment, but for real business, and so long as you continue thusly you can count on our continuance.

"WANT TO DIGEST THEM AT HOME."

Simmons Hardware Co., St. Louis, Mo. [*General Hardware*]: Enclosed please find \$2.00, being subscription for two copies of your paper for one year, one of which you will please mail to E. C. Simmons, No. 2727 Olive Street, St. Louis, Mo. The other to A. W. Douglas, No. 2845 Lucas Avenue, St. Louis, Mo. They are for use at the store but we want to digest them at home before we bring them here.

FOR ENGINES AND MACHINERY.

Can You Afford-

to carry in stock unknown brands of stove polish that your customers know nothing about, brands they do not call for, the quality of which is inferior, gives them dissatisfaction, and the consequent sale of which brings discredit to your store? Your best judgment answers NO! Then sell **ENAMELINE**, the Modern Stove Polish: Paste, Cake or Liquid. If you are doing business for a profit it will pay you to handle our whole line.

J. L. PRESCOTT & CO., NEW YORK.

U. M. C. "Smokeless" Shells. Nitro Powders. "U. M. C. No. 3" Primers.

All sportsmen know that the hands and arms, in shooting, become accustomed to the recoil produced by any uniform charge—and that the slightest unexpected variation of load will make a perceptible difference in their marksmanship.

It is because of the absolute uniformity of charge in U. M. C. Factory Loaded Shells—and the close attention paid to every detail of construction that they are so deservedly popular—being used more than any other shells of the same grade in the market.

**THE BURR PATENT
STEEL
Safety Lift Block**

A Perfect Self-Locking Rope
Tackle Block.

Runs as freely as an ordinary
rope tackle block.
Holds more securely than a
chain block.
Locks instantly and does not
cut the rope.
Allows the load to be lowered
safely and slowly, the operator
using only one hand.
Cannot stick nor jam when
the load is to be lowered.

"I have tested the Burr Self-
locking Steel Tackle Block and
find it the most practical, quick
and reliable Safety lift I know
of."

We Want the Earth and We Want it Fenced in.

THE
**ELECTRIC
DROP STEEL
FENCE
RATCHET.**

Absolute Satisfaction Guaranteed.

THIRTEEN REASONS

Why the Electric Drop Steel Ratchet should
commend itself to you.

(Thirteen is a lucky number you know.)

- 1st. It is simplest.
- 2nd. It is the lightest and strongest.
- 3rd. It is the most compact and rigid; no loose parts.
- 4th. Will tighten any length of wire desired.
- 5th. Adjustable to expansion and contraction.
- 6th. Can be attached to any point on the wire.
- 7th. It will tighten the wire uniformly because it draws equally from each way.
- 8th. Can also be used as a post ratchet by attaching a wire loop in the end to encircle the post.
- 9th. Can be used on any kind of post, either wood or iron.
- 10th. No extra expense in preparing posts, which is necessary when post ratchets are used.
- 11th. When wire becomes loose or sags from use, it can be instantly tightened.
- 12th. No special wrench required; any wrench on the farm will operate it.
- 13th. The most important feature; it can be bought for **Less Money** than any other good ratchet on the market.

FACTS.

FIRST.—Our cutlery sales in 1899 were largely in excess of any previous year.

SECOND.—We are just completing a new factory building, 100 x 30 feet, four stories, equipped with all modern conveniences. This will give us much needed room, enable us to further increase our output, and assures for our customers more prompt shipments than have been possible for some time past.

THIRD.—The shape and general appearance of our new Silver Plated Steel Handle Knives and Forks are highly spoken of. We are prepared to supply both the Sheffield and 12 dw. grades, German silver or steel forks, and guarantee them equal in every respect to any on the market, (we think they are better.)

FOURTH.—Since we took the first order for the Radical Departure in table cutlery, which we have designated as our "FOUR HUNDRED" line, we have never once been caught up with our orders. The goods are quite different from any others on the market—handsome, durable, hot-water proof. If you do not know about these goods, better ask for particulars.

FIFTH.—We warrant every thing we sell.

SIXTH.—Our New York Office is at No. 10 Warren Street.

"Bright & Newsy."

Biddle Hardware Co., Philadelphia, Pa. [*General Hardware and Bicycles*]: In season and out, we have claimed that the Hardware trade was the proper medium for the disposal of bicycles and bicycle sundries throughout the country, and our opinion on this point is so well known, that it does not seem as if we could strengthen it materially by saying it again. Of course large cities may be able to support a few exclusive bicycle men, but in the majority of towns and cities throughout the country the man must have other business in order to make it pay. We appreciate the fact that from the first HARDWARE has held the same views, and we think they have been fully justified by the trend of events. HARDWARE is always welcome in our office, and its bright and newsy columns are often a relief amid the cares of business.

Eclipse Cleanable Refrigerator.

"A MERITORIOUS SPECIALTY."

The only removable ice chamber refrigerator in which the cold dry air is taken to the lowest point in the provision room, through a removable flue, thus creating a positive circulation.

The upward current of air through the provision chamber is so swift that moisture and odors are quickly forced to the ice, the proper condenser and purifier.

The interior is all metal and all parts accessible for cleaning. Has an exceptionally large ice chamber.

Made in attractive plain and ornamental finishes, neat and attractive designs and excellent workmanship.

IT
IS
NOT
A
CHEAP
REFRIGERATOR.

Eclipse Refrigerator Works, Burlington, Vermont.

HARDWARE

The annual report of the United States Commissioner of Patents for the calendar year 1899, recently made public, shows a grand total of 25,527 patents issued last year, which also includes designs and reissues. This is a number that only once in a single previous year has been exceeded in the history of the Department. The total receipts of the office, \$1,325,457, were the largest for any year, except two, since 1836. Equally the same as last year, more patents in proportion to population were issued to citizens of Connecticut than to those of any other State, the ratio in this State of inventions being one to every 945 persons.

It would seem from present reports there was never a time since the war when there was more money in the South. Advancing prices on iron and coal have filled Alabama and East Tennessee with every attribute of wealth, and the lumber interests have not been behind in increasing their financial resources. The Southern planters are in a happy frame of mind from the present prices of cotton, and altogether the year 1900 will prove one long to be remembered.

The Chadborn & Coldwell Mfg. Co., Newburgh, N. Y., has been awarded a Silver Medal and Diploma, at the National Export Exposition, held recently in Philadelphia, for the complete exhibition of Excelsior roller and other grades of their popular lawn mowers. Their export trade on this well established line of goods still continues to be a feature of their production, and is annually increasing.

F. E. Kohler & Co., Canton, Ohio, in order to build a substantial addition to their already extensive plant, have purchased the lot adjoining, and as soon as the Spring rush of present business shall have slackened considerably, it is their intention to commence building with a view of being ready in season for Fall and Winter business.

The Kilbourne Mfg. Co., Fairhaven, Vt., have recently purchased from the Palmer Hardware Mfg. Co., of Troy, N. Y., all patents, trademarks, machinery, tools and appliances pertaining to the manufacture of the following specialties: Sunshine shoe sets, Jewel shoe sets, T. M. C., Sunshine, Jewel, Leq, Zim, and No. 22 daubers, Gem and Eclipse mincers, Frost King and Standard sidewalk cleaners, Little Giant ice tongs, Champion and Vulcan weeding hooks, Economist ice axes and Utility ice picks. All orders for these goods should be sent to the above-named company from this date. The Kilbourne Mfg. Co. are represented in New York City by C. E. Peabody, No. 90 Chambers Street.

F. H. Edwards, having bought out the interest of his partner Rodney Gloyd, in the Edwards & Gloyd Hardware Co., Richmond, Vt., intends continuing the business under the name of the Edwards Hardware Co., and would be pleased to receive the latest catalogues, price lists, etc., of shelf and heavy Hardware, stoves, tinware, sporting goods, etc., from manufacturers in these especial lines.

Elsewhere in our columns will be found an advertisement offering personal services at the Paris Exposition. The advertiser being a French gentleman, fully qualified, and with the best of references, would seem to make this a good proposition.

The Berlin Iron Bridge Co., of East Berlin, Conn., opened an office at Rooms 909-910 Stephen Girard Building, Philadelphia, Pa., on the 15th. It is in charge of L. H. Brumbaugh, who has been with the Bridge Co. for a number of years.

It is the unexpected that always happens. When steel superseded iron as a finished product in our markets it was supposed that the puddler would be lost in the shuffle, and various other vocations were suggested in which his love of work could be utilized. But steel for certain purposes is still an indefinite quantity, mechanical engineers preferring iron; and puddlers are still so much in demand that in the recent adjustment made in the scale of wages at Youngstown, Ohio, they were advanced to the highest rate per ton known in twenty years.

William B. Volger, manufacturer of the Johnston Pipe Wrench, formerly located at No. 32 Vesey Street, New York, has recently removed to No. 88 Chambers Street.

M. C. Hanton, No. 103 Chambers Street, has been appointed selling agent for New York and vicinity for the Grass Mfg. Co., Philadelphia, Pa. This company manufacture wood goods, including door knobs, base stops, tool handles, lemon squeezers, faucets and bar supplies. Mr. Hanton has added a new line of samples of builders' Hardware made by the Taylor & Boggis Foundry Co., Cleveland, Ohio, whom he has long represented in New York, New Jersey and the New England States.

Charles A. Tobias, No. 1131 Ridge Avenue, Philadelphia, has opened a new store with a full line of Hardware, tools, house furnishings, cutlery, etc., and would be pleased to receive from manufacturers and jobbers any catalogues, price lists, etc., covering above lines.

Hon. F. W. Peck, the head of the United States Commission to the Paris Exposition, states that the customs laws of France imposing a high duty on printed matter to be circulated for advertising purposes at the Paris Exposition have been repealed by the French Government. These laws are prohibitive of an important and valuable adjunct to Exposition work unless the exhibitors have their printing done in France, which is found impracticable. Mr. Peck had been seeking for several months to relieve the exhibitors of the United States of this heavy tax, and in his effort was assisted by the Secretary of State at Washington and by Ambassador Porter at Paris.

The retail Hardware dealers of South Carolina are forming an organization and intend meeting in Charlotte on May 20th. They desire to have the co-operation of the North Carolina dealers in perfecting an association that will be known as the "Retail Hardware Dealers' Association of the Carolinas." It is understood that the Hardware dealers will make a strong effort to complete their organization at an early date, so that they may be represented in Chicago as a body at the meeting next Fall of the retail Hardware associations from all parts of the United States. Mr. Paul McLure, a prominent Hardware merchant, of Chester, S. C., is the leader of the movement in South Carolina, and this is taken as a sign of the successful formation of an association in that State.

HARDWARE

VOL. XX.

MARCH 25, 1900.

NO. 12.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the
HARDWARE PUBLISHING CO., No. 148 CHAMBERS ST., NEW YORK.

Subscription, \$1.00 per year.

Subscription, Foreign, \$1.50 per year.

L. E. MITCHELL,	-	-	President.
A. P. MITCHELL,	-	-	Secretary and Treasurer.
W. C. BRUNDAGE,	-	-	Business Manager.
HENRY HOPKINS,	-	-	Editor.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

Editorial Trade Review.

While locally the weather has been extremely pleasant, although wintry in aspect from recent snow, the reports from principal Hardware centers indicate that the Winter trade is almost a closed incident, and the greatest preparation is being made for what is hoped will be the most satisfactory Spring trade in years. Stocks are already ordered with this expectation in view.

In some lines of goods stocks on hand are still sufficiently heavy to warrant a deal of push so as to realize the proper degree of profit on the sale, and the disposition of the dealer would incline to "cut" enough to do it, were it not for the fact that cutting has become unfashionable and must be handled with unusual discretion.

The retail trade, from reports given, do not seem to be loaded up with heavy stocks and from present appearances when the season opens with the fullness anticipated, the excess held by some of the jobbing fraternity will not long be in evidence.

The orders already given by the retail trade, indicate a confidence in the present conditions of the general market, but show no speculative feeling, current requirements only being anticipated; but assortment of goods ordered being larger than usual, shows a belief in a general trade revival that means a sale if the stock is on hand.

The continued rigidity in market prices on material has kept a number of building projects in abeyance, which prosperous conditions of trade and fine weather for forwarding the erection of, will soon make possible to complete.

It is anticipated by those dealers who closely watch the signs of current demand and supply, that the market on builders' Hardware and mechanics' tools will this Spring receive a greater impetus than has marked the movement in these important lines in a long time.

The advancing prices in the lumber market, will prove the greatest obstacle to a general revival of building operations, the Hardware entering into the specifications being less noticeable in value; but a demand for houses invariably follows business prosperity and the steady employment of our skilled artisans.

Manufacturers of staples in the Hardware line are less inclined to entertain orders, showing a slight concession from established prices, than jobbers who have good-sized stocks, purchased last Spring or Fall when

ruling prices were of a variable nature, and the bargain hunter occasionally caught something. Manufacturers believe a restricted production, if essential to sustain the market, would be a better policy than any low quotations which would indicate a weakness not discoverable at the present time.

Prices on Hardware products are still maintained abroad at high figures, and this, by helping our export trade, afford our factories an outlet for surplus products that prevents a possible over-production from any slackening of the current demand. The business being done at the present time by the jobbers is so far in advance of that recorded for a year ago, in volume as well as in value, as to greatly encourage the wholesale houses into a belief that a difference in selling prices is not alone the cause of the good showing in the sales department for the months of January and February and so far in March.

There are many signs of the times that show how impossible it will be this year to expect any important concessions in price on such lines the quotations on which are based upon the prevailing prices of iron and steel. Reports are current that a foreign demand exists for our pig iron for immediate shipment, and that orders have been turned down from inability to deliver within specified dates. This is added to strikes for shorter hours of labor, increasing rate of wages for skilled mechanics, and a demand from abroad for this class of workmen to superintend departments in foreign factories that already feel the strong competition of this country, having lost much business in consequence of our more perfect skill in producing, and greater economy in methods of factory development.

Contentions like the labor troubles in Chicago, which are keeping 60,000 men idle, and the corresponding disturbing influence in Cleveland agitating for a shorter day, are the spots on the sun of the country's prosperity that simply evidence the restlessness of the industrious laborer who shows his inability to stand prosperity, especially when the union he belongs to has a surplus to distribute.

In Honor of Our Birthday.

On April 10th, as our readers and advertising patrons are doubtless aware, it is our intention to issue the handsomest impression of our paper given during the year. It will be superbly printed on heavy coated paper, by the aid of which the finest half-tone illustrations may be used to advantage by our advertisers, and a more satisfactory opportunity for artistic advertising will not be offered the Hardware trade this year.

The time is growing so short in which acceptance of the favors of our patrons for space in this issue can be entertained, that we may, we hope, be pardoned for making this "third and last call" on those who design availing themselves of our proposition. On page 25 our announcement goes more into detail, and in order to avoid a feeling of regret at overlooking this unusual opportunity, we hope that orders for space will be forwarded at once, so that proper care may be given to the composition and advantageous location also secured. It is especially requested that whenever possible the copy and electrotypes for the advertisement desired should be forwarded at same time, as frequently an unexpected delay is caused by the non-arrival of some of this material.

Remarkable Export Record for February.

The month of February, 1900, has made the most remarkable record of any February in the history of our foreign commerce. The exports during that month have averaged five million dollars for every business day in the month, and the total exports were \$119,765,762, or more than twenty-five per cent. greater than that of any preceding February. Not only are the exports larger than those of any preceding February, but the excess of exports over imports is also much larger than in any preceding February, surpassing those of 1898 by nearly twenty-five per cent. and being more than fifty per cent. in excess of that of any earlier year. February is a month of heavy importations, and it frequently happens that the imports exceed the exports, so that an excess of \$50,991,612 in exports over imports in February makes the record of the month a remarkable one, despite the fact that the importations which amounted to \$68,774,150 were slightly larger than those of any preceding year except 1893. The relative importance of the February, 1900, record will be more clearly seen when it is stated that the average February exports during the last ten years were seventy-six million dollars per month, while the total exports of February, 1900, as already stated were \$119,765,762; on the other hand, the average February imports of the preceding decade were sixty-one million dollars; making the average February excess of exports over imports during that time fifteen million dollars, while that of February, 1900, is \$50,991,612. This makes the total exportation for the eight months ending with February, about seventy-five million dollars greater than that of the corresponding months of the fiscal year, 1899, and makes it apparent that our total exports in the fiscal year ending June 30, will exceed those of any preceding year by probably 100 million dollars, and carry the total commerce of the year considerably beyond the two billion dollar line.

The following table shows the imports and exports during the month of February during a term of years, thus giving an opportunity to trace their relative growth:

February.	Imports.	Exports.
1893.....	\$72,702,238	\$59,931,984
1894.....	48,725,004	65,175,331
1895.....	58,315,981	55,982,734
1896.....	62,478,116	77,701,904
1897.....	59,237,377	79,821,086
1898.....	53,974,649	94,417,453
1899.....	60,258,452	93,837,151
1900.....	68,774,150	119,765,762

The following table shows the imports and exports during the first eight months of each fiscal year for a term of years:

Eight months ending February—	Imports.	Exports.
1893.....	\$557,073,019	\$586,873,360
1894.....	429,276,457	638,826,851
1895.....	466,233,616	557,885,668
1896.....	541,194,833	602,666,873
1897.....	422,515,394	734,908,213
1898.....	393,901,179	813,284,800
1899.....	447,203,833	843,433,266
1900.....	555,069,617	919,873,086

Death of Joseph L. Clark.

Joseph Lyman Clark, who has long been considered the oldest Hardwareman in the city of New York, and probably in the United States, died at his home in Bloomfield, N. J., March 12th, of apoplexy. He was in his ninety-first year and was actively engaged in business up to the time of his death.

Mr. Clark was born at Cooperstown, N. Y., April 24th, 1809, and by accepting employment with Sayre & Thurber, Utica, N. Y., entered the Hardware business as a clerk in 1825. He left Utica in 1830, and coming to New York was next a clerk for Oakley & Mallory, who were jobbers and importers of Hardware, and stayed in their employ until 1834, when he purchased the interest in the firm of Mr. Mallory, and the firm became Oakley, Johnson & Clark.

Oakley, Johnson & Clark were at No. 69 Pearl Street, which was at the head of Coenties Slip, when the great fire of December 16-17, 1835, occurred, in which 650 buildings

were destroyed. According to a marble memorial tablet now on the building at Nos. 88-90 Pearl Street, the loss aggregated \$20,000,000. The conflagration started at 10 o'clock at night in Pearl Street, near Wall, and worked south. The three members of the firm watched the blaze for a time and then decided to move their goods down to the intersection of Broadway and Pearl Streets. They helped themselves to casks at a neighboring cooperage, and a hand cart. Only cutlery and fine goods were packed. Rejecting the offer of a cartman with a horse and cart at \$25 a load, they rolled the casks all the way to the Battery. Curiously enough, the fire did not cross Coenties Slip or Coenties Alley, which was a continuation of the slip. The next morning, finding the store had not been injured, they rolled their goods back.

The firm's first experience in a panic came in 1836, the disaster spreading all over the country, but they weathered it all right. Neither did they suffer in the panic of 1857. In 1840 he disposed of his interest in that concern and connected himself with Townsend, Sayre & Co., which firm within a year or two became Townsend, Clark & Co. This firm continued in business until 1858, when Mr. Clark, upon its dissolution, associated himself with Charles S. Scofield, the firm being Clark & Scofield, which continued until 1861. The year following Mr. Clark became interested in the wholesale and retail Hardware business with Frank Freeman, of Morristown, N. J., remaining there for six years. In 1863 the Livingston Mfg. Co. became incorporated as manufacturers of saws and files, at Johnstown, N. Y., and Mr. Clark became treasurer of the company.

Mr. Clark has ever since that time been identified with the interests of the Livingstons, and from 1865 up to the time of his death, was actively associated with S. Otis Livingston, in the Livingston Nail Co., at No. 104 Reade Street, New York.

He married Miss Thorne, a sister of William K. Thorne, who was a son-in-law of Cornelius Vanderbilt. There were three sons and three daughters. Mrs. Clark died at the age of 84 years.

Mr. Clark witnessed most of the great processions in the vicinity of New York for many years. He saw that in honor of General Jackson in 1832, from the roof of St. Paul's church. He also witnessed all the Broadway processions at which Presidents of the United States were present. The funeral of John Quincy Adams was another notable event in which Mr. Clark took part. While in Utica, N. Y., in 1824, he held a pleasant conversation with General Lafayette. He was also acquainted with Henry Clay.

When Mr. Clark first came to New York in 1830, the population of this city was 210,000. He remembered a Spring election that year, when the party opposing the administration made an issue of extravagance, the municipal expenses the previous year having aggregated \$150,000, though the city had no debt. Mr. Clark was a Whig, and later a Republican, and never failed to vote. Mr. Clark never entered a saloon to drink intoxicating liquor.

Mr. Clark was held in the highest estimation by all his business associates. He was a Christian gentleman of unblemished reputation, honorable in every walk in life and charitable to a fault. He leaves behind him an unsullied record of a long business career that all his friends can look upon with pride and pleasure.

He was in his ninety-first year, and had been a member of Christ Episcopal Church since residing in Bloomfield. He was senior warden of that church for more than twenty years. He is survived by two sons, Edwin and Mortimer, and three daughters, Mrs. Alexander Duerr, Mrs. J. Howard Hardcastle and Miss Augusta A. Clark. The funeral services were held at Christ Church, and the interment was made in Bloomfield Cemetery.

One-tenth of the world is still unexplored.

Death of James H. Goldey.

James H. Goldey, president of the Hardware Board of Trade, No. 4 Warren Street, New York, died suddenly early Wednesday morning, March 21st, of heart disease. Mr. Goldey attended business at his office as usual on Tuesday and started for his home in West Ninety-fourth Street, New York, at the usual time. At Fifty-seventh Street and Broadway he became suddenly ill, but by obtaining promptly the services of a physician, he was enabled to reach home, and felt comparatively better later in the evening. During the night, under another attack, he became worse, and died about 1:30 A. M. He will be buried in Oswego, N. Y., Saturday, March 24th.

Mr. Goldey had been long identified with the Hardware trade, especially through the medium of the Hardware Board of Trade, a collection agency and banking business, of which he was the head. He was a member of the Hardware Club, and from his well-known probity and integrity highly esteemed and respected by the industry with which he had so long been identified.

LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law, No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 143 Chambers Street, New York City.

QUESTION.—The States of New Jersey, Ohio, Pennsylvania, and possibly others, have passed laws requiring foreign corporations, doing business in the States, to file certificates with the Secretary of State, either once or annually, setting forth such information regarding the organization and capital of the organization as is required, and further designating agents within the State, on whom process may be served in all actions brought against the corporations; and failure to do this, we understand, forfeits our right to maintain an action against any creditor within the States named. We are obliged to pay a fee of from \$10 to \$15 for filing original certificate, and in some cases a nominal fee for filing an annual report, besides paying such fee as may be agreed upon to the party or parties designated as agents for the respective States. While this is a small matter in one sense, it looks to us as if the law was principally for the benefit of the lawyers who undertake for a small fee of say \$10 per annum to look after the filing of the necessary certificate and become our agents for this purpose in their respective States.

REPLY.—The corporations of one State may exercise any or all of their powers in another State, unless the latter State by its statutes, decisions or policy forbids. It is, however, constitutional for a State to refuse to allow that privilege, except as against corporations engaged in interstate commerce, (Cook on Corporations Vol. 2, Sec. 696). The New Jersey statute upon this subject is to the effect that until the certificate of the Secretary of State authorizing the corporation to transact business is obtained, a foreign corporation shall not maintain an action in the State except on a contract made prior to March 14, 1895. The Ohio statute provides that if business is done without the necessary certificate the corporation cannot maintain any action upon any contract made in the State until it shall have procured the required certificate, and the Pennsylvania statute provides that such corporations shall not do business in the State until they have an office and an agent in the State. A requirement that a foreign corporation shall appoint an agent upon whom process can be served or obtain a certificate from a State officer is valid. The corporation is usually forbidden to contract or sue in the State before complying with it. It was formerly held that contracts made before the corporation had complied with the statute were void, but the later doctrine seems to be that the contracts are not void but unenforceable until compliance, and that corporations cannot defeat its obligations by such a defence. (Cook on Corporations, Vol. 2, Sec. 700).

QUESTION.—Last January I made an oral contract with an employee of mine for his services for one year and six months from that date. We agreed upon the price, and everything continued smoothly until about a week ago, when the man came to me and told me that he had received a better offer somewhere else, and that he intended to leave. I reminded him of his contract, but he said I might sue him if I liked, and refused to stay. This particular man was very valuable to me and his leaving me is a severe loss to me. Can I not enforce this contract and compel him to fulfil it?

REPLY.—You cannot enforce such an agreement as you describe. The Statute of Frauds, among other things, provides that contracts for services not to be performed within one year from the time of the making thereof, must be in writing. Although such a contract is not void, it is unenforceable.

QUESTION.—I hold a note which reads as follows: "Ten days after date I promise to pay to John Jones \$250, value received, date January 18, 1900." Signed "A.B." I have had a dispute with a friend of mine as to the negotiability of the note. We have agreed to abide by the decision of your paper. 1. Is the note negotiable? 2. If not why not?

REPLY.—1. The note is not negotiable. 2. Section 20 of Article 2, of Chapter 612 of the Laws of 1897, which chapter constitutes the law of negotiable instruments in New York State, provides that an instrument to be negotiable must conform to the following requirements: 1. It must be in writing and signed by the maker or drawer. 2. Must contain an unconditional promise or order to pay a sum certain in money. 3. Must be payable on demand, or at a fixed or determined future time. 4. Must be payable to order or to bearer. 5. Where the instrument is addressed to a drawer, he must be named or otherwise indicated therein with reasonable certainty. The note is therefore not negotiable, because it does not comply with the fourth requirement of the statute cited. The omission of the word "order" or "bearer" after a named person in a promissory note, although it defeats its negotiability does not affect the assignability of the note. The note may still be assigned.

QUESTION.—I have sold a quantity of goods to a customer and he has not paid me. He lives in New Jersey, but has a place of business in New York City. The goods are still in his possession, here in New York. How should I proceed to collect my money?

REPLY.—The fact that your customer transacts business in New York does not make him a resident of this State. He is a resident of New Jersey, apparently, from the facts stated, and if he has property here, your wisest course would be to begin an action against him and attach it. You should consult a lawyer personally as to the necessary steps.

Seattle Hardware Co.'s New Catalogue.

One of the most important catalogues that has reached us this season was received recently from the Seattle Hardware Co., Seattle, Wash. It is a volume of weight and dignity, containing 1150 pages, including index, printed on an excellent heavy super paper, well illustrated, and the information imparted has ample space given it, no attempt being made to economize by using thin paper and condensing the matter by taking the smallest cuts which would convey the information.

As this is the initial effort of the Seattle Hardware Co. in catalogue making, they deserve considerable credit for having achieved so great a success. They have succeeded in incorporating in this volume several new ideas in catalogue construction worthy of being adopted by those who follow them. Among these may be mentioned: All the articles catalogued, with rare exceptions, are fully illustrated; manufacturers' numbers have been adhered to wherever possible, and in their absence numbers have been used which serve to designate a particular line of goods, and even indicate sizes.

They have used manufacturers' lists when the trade discounts on the goods were large enough to warrant their use by the retailer, but when too close for this purpose lists have been substituted that would give a price which would be proper to use in dealing with the consumer when retailer used the catalogue. Considerable expense and much industry for good have been undertaken in compiling the catalogue to secure and note opposite each article the weight of same when packed for shipment. Unless specified as net, all weights given throughout the book are "shipping weights."

In a section of country where freight enters into cost as largely as it does in the territory covered by the Seattle Co., the importance of this new departure cannot be overestimated. Their customers must find this information of great assistance and invaluable. Goods have been classified in proper groups and departments as far as it could possibly be accomplished, the builders' and shelf Hardware for convenience and ready reference being placed in the latter part of the book. They doubt the advisability at the present time of issuing a discount sheet, the prices of which may become obsolete and misleading in a month, but they state their willingness at all times to furnish prices and solicit enquiries having that end in view. The volume is bound in an excellent manner, in leather back and corners and stiff beveled board sides with rounded corners. The crowning glory of the catalogue, however, is the index, which is admirably printed on linen bond paper that will stand any amount of rough handling without mutilation, and the types used and manner of indexing it would be very difficult to improve upon. Goods are placed under every possible heading to insure quick reference, and by the use of heavy-faced type, for special purposes, the idea is conveyed that considerably more thought was devoted to this important feature than is usually the case with a catalogue compiler. The designating alphabet on the edges of the cut leaves is printed on linen slips of peculiar cut, gummed to the cut corners, as a guard, which it would be difficult to make more secure against fracture in handling, the whole being strengthened between index and catalogue by a sheet of heavy stencil board, cut a little wider than the rest of the pages to make "page 1" easily accessible.

Among the features connected with its construction, this catalogue shows the greatest care in the following: The book is hand-sewed in the old-fashioned Oxford style, reinforced in the back with leather, and bound in the best grade of cowhide. The paper used, the company take pride in stating, is of Washington make, and the book is submitted as a Washington production, and the compiling, composition, press-work and binding were all done in Seattle. This work is claimed to be the first work of the kind issued of which this can be stated.

Although a number of manufacturers have expressed a desire to have their goods represented, expressing their willingness to pay for space, the company state the offers have been respectfully declined, and the catalogue in this respect represents a stock of goods selected solely for the requirements of a section of country, the needs of which can be covered by the contents of this important volume.

Commercial Prospects in the Philippines.

"Commerce and Commercial Prospects in the Philippines" is the subject of a discussion in the *Moniteur Officiel du Commerce*, an official publication of the French Government, which has just reached the Treasury Bureau of Statistics. It calls attention of those interested in the foreign commerce of France to the fact that American commerce in the Orient is making rapid developments, and especially so through the foothold which it has obtained at Manila. The statement is as follows:

"The export houses of Manila are about resuming their

business activity and responding to the demands for sugar abaca, copra, tobacco, etc., which they had been unable to satisfy during the whole of the past year.

"The import trade underwent important changes by reason of the occupation of the Philippines by the United States, this change by no means yet being complete. Before acting the business men of the colony had to study the new conditions under which henceforward the importation of foreign manufactures might be carried on. The Philippine market received prior to the Spanish-American war all sorts of articles coming from England, Spain, France, Belgium, etc. The United States, whose exports to these islands had been relatively of very insignificant importance, have since taken an important place in the victualling of Manila, which place is daily growing in importance. The business men of this city, after a few months of observation, became convinced that in order to hold their own against the American competitor, they would have to replenish part of their stock in trade with American goods, so that now one can see in all the stores of Manila, besides the foreign goods formerly imported, also a number of articles which the American manufacturers try to introduce in large quantities.

"The competition on the part of American products is bound to become more formidable as more Americans become settled in this colony, and even now old Manila business houses send orders to American manufacturers, who have acquainted them with their methods of doing business, ever since August, 1898, either through detailed catalogues, or more often through active and intelligent agents.

"It is quite difficult to state at the present time which foreign products will win the favor of the public in Manila and the provinces of the archipelagoes, for the American part of the population is at present made up principally of soldiers and officers' families; the rest of the American colony in this city is quite small, though constantly growing in number—mainly civilians who visit the country and study the chances of its exploitation. The great capitalists, manufacturers and business men of the Union, however, have not yet made their appearance on the ground; neither are they likely to as long as tranquillity is not restored in all parts of these islands. A constant study of the Philippine situation and of the changes in the commercial condition of the local market would therefore seem to be indispensable to all foreign manufacturers and business men who wish to increase the volume of their business or open connections with Manila merchants. Great tact and skill have to be employed by French commerce, particularly in order to hold its own against encroachments on the part of foreign competitors, who show extraordinary activity in winning new markets on the Philippines; calm and persevering in the case of the Germans, English and Belgians; noisy and almost brutal in the case of the Americans. Promptness and despatch in the execution of orders and careful packing are recommended to the French exporter. During the year complaints about careless packing, resulting in damage to the goods, have been of such frequent occurrence that they may prove even hurtful to the importation of our goods. The merchants of Manila are led to compare methods, and to acknowledge that all goods shipped from the United States are packed with such care that damage to and deterioration of the goods due to bad packing are exceedingly rare."

Nature produces the light given by the firefly at about one-four-hundredth part of the cost of the energy expended in the candle flame, and at an insignificant fraction of the cost of electric light, or the most economical light yet devised.—*Exchange*.

The largest bank in the world is in London.

N. E. HARDWARE DEALERS' ASSOCIATION.

The regular monthly meeting of the above association was held at the United States Hotel, Boston, Wednesday, March 14th. The guest and principal speaker of the evening was Chas. Clark Adams, Boston, representative of Sargent & Co. Mr. Adams' reputation as a traveler and raconteur is deservedly high and his appearance at the festive board is always a sign of an intellectual dessert to follow.

The business of the meeting was begun by the reading and adoption of the yearly reports of the secretary and the treasurer, that of the latter showing the most gratifying financial condition.

The membership committee reported favorably upon the following applicants' names: John Duncan, Geo. S. Hedge, Emmett C. Howard, and James Leigh, who were accordingly elected.

The advent of the new President was marked by a departure at once aggressive and to the point. With a view to receiving definite information regarding the discrepancy in the selling prices of various members of the organization, and in order to get a basic foundation upon which to found a scale of prices suitable to all, the following printed forms were distributed among the members, and after the information had been supplied, were collected and placed in charge of President Burditt:

<i>Boston, March 14, 1900.</i>	
<i>Gentlemen:</i>	
<i>Will you please mark your present selling price on goods below, without Signature or Location.</i>	
<i>Nails, Wire, Base, Keg</i>	<i>- - -</i>
<i>" Cut " "</i>	<i>- - -</i>
<i>" Wire, Retail per Lb.</i>	<i>- - -</i>
<i>" Cut, " "</i>	<i>- - -</i>
<i>Zinc, Whole Sheet " "</i>	<i>- - -</i>
<i>" Cut Sheet " "</i>	<i>- - -</i>
<i>Flat Head Iron Screws, Dis.</i>	<i>- - -</i>
<i>Rope, Common Size, per Lb.</i>	<i>- - -</i>

At the next meeting these prices will be discussed and a mean price on each article struck, to which all members will probable be asked to consent.

The following committees for the coming year were appointed:

Pricing Committee.—D. Fletcher Barber, J. B. Hunter, J. C. Nichols and James B. McKay.

Investigation Committee.—Geo. W. Burditt, Anthony S. Morss, and E. M. Richardson.

Auditor.—Hiram G. Janvrin.

Mr. Adams was then introduced and for the next half hour had the closest attention of his audience. His subject was "A Visit to Belgium," and his description of the art treasures, buildings, statuary, industries, and native peculiarities was most interesting and instructive. His remarks were illustrated by some pictures taken in Brussels, Antwerp and on the field of Waterloo, as well as a miniature reproduction of the Manikin Statue.

A vote of thanks to the speaker was carried by a standing vote.

The subject for discussion for the evening, "The advance in prices and its effect on the Hardware trade," then occupied the attention of the members, and a general discussion followed.

S. A. Bigelow said that from the wholesaler's point of

view, he did not think the advance had tended to reduce the sales. During the depressed times no one was satisfied, not even the consumer, as there was no profit for anyone. Regarding the advance, he had known far greater ones, and had in his possession a bill, dated 1864, in which one dozen axes brought \$20, and nails were charged at \$9 per keg. He considered that many Hardware firms failed of success by inadequate attention to the relation of expenses to profits, and recommended a close study of this question.

Speaking of uniformity in prices, E. M. Richardson strongly advised the sending out of a special representative to arrange a uniform schedule for each locality.

The president said he was fully convinced that no arrangement of uniform prices in Boston proper could be kept, owing to the want of union in the trade, but that in suburban localities there should be little or no trouble.

Mr. Plummer stated that outside competition was more responsible for existing disunion in his locality than anything else.

Mr. Hunter said that his trouble came more from the manufacturer than from his competitors. Three times during the past week he had had to figure in competition with manufacturers, and in one specific case where the order had been awarded the manufacturer, the latter declined to fill the order through Mr. Hunter's house despite the architect's request to that effect, and the fact that on Mr. Hunter's shelves were some two thousand dollars worth of that manufacturer's goods. Mr. Hunter declined to mention any names.

Mr. Adams, speaking from the manufacturer's standpoint, said he could well understand Mr. Hunter's feelings. He could say that the firm he represented had never gone to the consumer direct, except at the request of the retailer. He considered that the cure for this evil lay in the retailers' hands, and required only united action to cause its prompt discontinuance.

Regarding the question of the advance in prices he had by a singular coincidence received a circular letter from his firm, that morning, asking the same question. He thought that the consumer generally was holding off for a break in prices, and it was to the interest of all to maintain present prices until at least present stock was disposed of. This is the aim of the producers of raw material and the manufacturers, and they should have the support of the distributors.

Several other members spoke to practically the same effect, and a motion to adjourn followed.

The Automobile Hearse.

There is a sort of grim humor in the idea of the exclusion of automobiles from cemeteries, as instanced in the recent action of the trustees of the Forest Hills Cemetery at Boston. As the *Boston Herald* remarked on the matter, "It is but fair to say that the automobiles are not headed that way." It was the senior James Fisk, we believe, who declined to subscribe toward building a fence about the village cemetery, saying that there was no use for a fence; those who were inside could not get out and nobody who was outside wanted to get in.—*Automobile Magazine*.

"This paper says you should never cut a pie with a cold knife."

"I never do. If I haven't a hot knife I eat the whole pie."—*Cleveland Plain Dealer*.

• • OUR • • "TENTH ANNIVERSARY" NUMBER.

APRIL 10, 1900.

In accordance with our annual custom, we shall celebrate the
ANNIVERSARY OF THE FOUNDING OF

ALL
THE NEWS. **HARDWARE** **HARDWARE**
EXCLUSIVELY.

by the publication of the handsomest and most artistic specimen of a trade journal ever published in the interest of the Hardware industry, printed upon heavy coated paper of the same style and quality as this prospectus.

THOSE of our advertisers who may remember the paragon of publications which was issued by us April 10 1898, followed by that masterpiece of printing on the same date in 1899, can form an idea of what is meant when we say it is our intention to duplicate, and, if possible, surpass the high standard of newspaper excellence then and there achieved.

The two previous Anniversary Numbers have each been devoted to a special object—that of 1898 to the interest of the numerous **HARDWARE ASSOCIATIONS**, to the furthering of whose intelligent aims the greater part of that issue was given, while of our Anniversary number of 1899 we made a **HARDWARE JOBBERS' NUMBER**, the issue of that date being largely given to the deserved exploitation of their methods of doing business and the ethics of the trade in this special line of work.

The contents this year will be more varied than in either of these previous issues, and will appeal to our readers and subscribers in a way that will insure a careful consideration being given to every page, whether of general reading or its many attractive advertisements.

To our advertisers we offer an opportunity, rarely met with outside the pages of these Anniversary Numbers of ours, to exploit their choicest lines of goods by the aid of the fine half-tone illustrations now so generally used in catalogue work and so useless for illustration purposes of a high order, except on the superior grade of coated paper used in these special numbers. We challenge comparison for perfect artistic expression, with the superb excellence shown in our treatment of these favors from our advertising patrons.

We have already in hand a number of pages ordered for this issue, and we would urge upon our advertising friends the necessity for an early order for space in this important number.

HARDWARE PUBLISHING CO.,

INTERSTATE RETAIL HDW. DEALERS' ASSN.

A meeting of retail Hardware dealers from ten States, was held on March 12th in the club room of the Sherman House, Chicago, for the purpose of considering the advisability of forming a National or an Inter-State organization, so that the work of the various State Associations having reference to trade abuses, could be made much more effective and general than is possible through separate organizations. Delegates were present as follows:

Indiana—W. H. Weed, Vincennes; E. M. Bush, Evansville; E. L. Corey, Argos; I. A. Sibley, South Bend.

Michigan—Chas. F. Bock, Battle Creek; H. C. Weber, Detroit; H. W. Weber, West Bay City; Fred. H. Cozzens, Detroit.

Illinois—Z. T. Miller, Bloomington; George A. Engelhardt, Chicago; L. M. Reeves, Peoria; H. G. Cormick, Centralia.

Missouri—J. W. Poland, Carrollton; F. A. Kansteiner, St. Louis; Taylor Frier, Louisiana; A. F. Geschwinder, St. Louis.

Iowa—H. A. Cole, Council Bluffs; S. R. Miles, Mason City.

Kansas—Frank Rudy, Paola.

Wisconsin—C. A. Peck, Berlin; A. H. Sheldon, Janesville.

Minnesota—James E. O'Brien, Crookston; C. F. Ladner, St. Cloud.

North Dakota—H. T. Helgesen, Milton; C. N. Barnes, Grand Forks.

A preliminary organization was effected by the selection of Z. T. Miller, of Bloomington, Ill., as chairman, and Fred. H. Cozzens, of Detroit, Mich., as secretary. A Committee on Credentials was appointed, consisting of Messrs. Sibley, of Indiana; Bock, of Michigan; Cormick, of Illinois; Poland, of Missouri; Miles, of Iowa; Rudy, of Kansas; Peck, of Wisconsin; Ladner, of Minnesota, and Barnes, of North Dakota.

A recess was then taken in order that this committee should make its report. The delegates above mentioned were then duly accredited to the conference. Letters were received from the officers of the State organizations in Texas and Tennessee, pledging their hearty support to the work in hand, and stating that their organization would fall in line with any action taken at this conference. These letters were signed by W. A. Jones, secretary of the East Tennessee Retail Hardware & Implement Dealers' Association, and by John W. Bayless, of Athens, Tenn., on behalf of their organizations, and by W. H. Richardson, of Austin, president of the Retail Hardware & Implement Dealers' Association of Texas.

At the opening of the conference, Z. T. Miller, whose continued efforts in this direction made this meeting assume its present importance, read the following address, which was listened to with interest, and we give it in full as follows:

ADDRESS OF Z. T. MILLER.

Gentlemen: At the Retail Hardware Dealers' Convention held in this city last August, we adopted a resolution favoring a National Association. I also notice that several other State associations passed similar resolutions. After waiting until December for some of the older associations to make an effort toward consummating that which we seemed to feel a necessity, and after more careful and thorough investigation of trade conditions had convinced me of the great benefit likely to be derived from an opportunity to bring forward the experiences and views and co-operation of the different sections, I concluded there was no excuse for Illinois to wait for some one to do that which,

from force of circumstances, probably devolved upon us as a duty. As soon as I arrived at this conclusion, I wrote to the presidents of State Associations, as far as their addresses were known to me, broaching the question of a National conference for the purpose of interchanging ideas evolved from experiences in the different sections, and to discuss, and, if deemed advisable, institute a National Association.

The organization of our State associations, as well as others of like nature all over the country, should be prima facie evidence of the seriousness of conditions that can lead to such extensive association, and necessarily opens a large field for investigation and discussion in determining the causes underlying the conditions from which these organizations are born, while the development of wise plans to correct these evils are, in my judgment, sufficient reasons for the step we are taking in holding this conference. The lessons likely to arise from a meeting like this should form an important feature of our programme and will in themselves undoubtedly prove a sufficient compensation to our State associations. But the chief aim of this conference should be the institution of plans whereby we may co-operate the influences of all toward accomplishing our purpose. Thus far we have not accomplished as much as might be desired, and this is usually excused under the plea that no grievances had been presented to our executive committees, when, in fact, the executive committees saw much that should be accomplished, but felt the futility of such an effort under the non-co-operative conditions which can only be remedied through some manner of national association.

Inviting you here to our great commercial center to consider these matters, we feel that Illinois has simply been acting in the line of what we consider a duty to ourselves and the trade. We are pleased to note the unanimous support of this movement and the interest it is arousing in the States where the trade is not yet organized, indicating that a National Association will soon accomplish that for which the State associations have been patiently waiting before a National organization should be attempted.

It may, and probably will, require some time to develop the scope of a National Association. Mistakes will undoubtedly be made at first, but these are the experiences from which evolve our brightest and best works. Illinois asks no special advantages save the interests of the many. In this spirit we welcome you to our State, to discuss and, if possible, determine upon a germ which will develop abreast with an inevitable commercial revolution. The clause in the call for this conference, restricting the vote of each State to two votes until a permanent organization should dispose of this question, was given as an assurance that no improper advantages would be attempted either in temporary or permanent organization. Whether a delegate comes from Dakota, Texas or the Pacific Coast, each has as great an interest and duty to perform in this conference as the delegates from this city and State.

Gentlemen, this is your convention, for you to organize to arrange its programme and determine its results.

After the report of the Committee on Credentials had been received, the entire afternoon of Monday was taken up in an extended discussion as to whether or not it would be advisable to form a general association, and whether it should be called a National Association or an Inter-State Association, comprising at the present only those States represented at the gathering, but under the constitution and by-laws broad enough to permit its growth to national proportions, which it was the hope of those present would be accomplished at an early date.

TUESDAY MORNING SESSION.

The adjourned meeting convened Tuesday morning at 10 o'clock in the gentlemen's parlors of the Sherman House, with Chairman Miller in the chair. The reading of the minutes of the previous meeting was dispensed with, and the chair announced that the question before the meeting for reconsideration was the motion offered just before ad-

jourment on Monday, to the effect that the informal discussion as to the advisability of forming a joint Association to embrace several States represented, and to take in other States as soon as they were in shape to co-operate with them, be considered closed, and that the assembly at once proceed to form an organization under the name of the Interstate Retail Hardware Dealers' Association, which was then proceeded with. On motion of Mr. Cole, of Iowa, the chair was authorized to appoint the following committees:

On Constitution and By-Laws: W. H. Weed, Evansville, Ind.; H. W. Weber, West Bay City, Mich.; H. G. Cormick, Centralia, Ill.; F. A. Kansteiner, St. Louis, Mo.; H. A. Cole, Council Bluffs, Iowa; Frank Rudy, Paola, Kan.; T. H. Sheldon, Janesville, Wis.; C. F. Ladner, St. Cloud, Minn.; and H. T. Helgesen, Milton, N. Dak.

On motion the name of S. S. Bryan, Titusville, Pa., was added to this committee.

Committee on Resolutions: Z. T. Miller, Bloomington, Ill.; H. C. Weber, Detroit, Mich.; J. W. Poland, Carrollton, Mo.; I. A. Sibley, South Bend, Ind.; C. N. Barnes, Grand Forks, N. Dak.

Committee on Finance: C. F. Bock, Battle Creek, Mich.; S. R. Miles, Mason City, Iowa, and Jas. E. O'Brien, of Crookston, Minn.

Committee on Order of Business: E. N. Bush, Evansville, Ind.; Taylor S. Frier, Louisiana, Mo., and C. A. Peck, Berlin, Wis.

Adjournment was then had until two o'clock Tuesday afternoon.

TUESDAY AFTERNOON SESSION.

The afternoon session was called to order by Chairman Miller. The minutes of the two previous sessions were read and approved. The first business presented was the report by Chairman Bush of the committee on the order of business. The report was that the following order of business be followed:

First—Report of committee on order of business.

Second—Report of committee on constitution and by-laws.

Third—Report of committee on finance.

Fourth—Report of committee on resolutions.

Fifth—Election of officers.

Sixth—Selection of time and place for next meeting.

Seventh—Adjournment.

The report was adopted.

H. A. Cole, of Council Bluffs, Iowa, then presented the report of the committee on constitution and by-laws, which, after a few minor changes, was accepted, and the constitution and by-laws were adopted.

On account of the unavoidable absence from the Wednesday sessions of several members, the order of business was changed, and the election of officers then took place. The election resulted as follows:

OFFICERS OF THE NEW ASSOCIATION.

President, Z. T. Miller, Bloomington, Ill.

Vice-president, H. A. Cole, Council Bluffs, Iowa.

EXECUTIVE COMMITTEE.

The following were elected as members of the executive committee:

I. A. Sibley, South Bend, Ind.

C. F. Ladner, St. Cloud, Minn.

C. F. Bock, Battle Creek, Mich.

C. A. Peck, Berlin, Wis.

J. W. Poland, Carrollton, Mo.

On motion, the meeting adjourned to meet at 9 o'clock Wednesday morning.

WEDNESDAY MORNING'S SESSION.

This morning the session opened at 9 o'clock, with a fair representation present. The larger part of the morning was devoted to the discussion of the by-laws which were adopted at yesterday's session, it being found neces-

sary to alter a few clauses which had been hastily adopted.

The committee on resolutions submitted their report which was discussed and referred to the executive committee.

After considerable discussion it was finally decided to make all future meetings of the Interstate Retail Hardware Dealers' Association entirely executive, and that all meetings of State associations' members of the Interstate Association be also executive, with the exception of one open session.

TREASURER SELECTED.

At a meeting of the executive committee in the afternoon H. T. Helgesen, Milton, N. Dak., was elected treasurer, but the appointment of a secretary was referred to the president, with power of appointment.

On motion, Chicago was selected as the place for holding the next meeting, the date to be set by the executive committee. There being nothing further to consider, a motion to adjourn, made at 5:30, was carried.

The entertainment which was offered the visiting delegates to the Interstate Retail Hardware Dealers' Association was in the form of a banquet. This was held at the Sherman House, Wednesday evening, at 8:30, and an elaborate menu was served, partaken of by some eighty persons, which embraced a majority of the delegates, and a number of the manufacturers and jobbers and their representatives. The tables were arranged in the customary three parallel lines, and the speaker's table was presided over by toastmaster Henry A. Taylor, of the American Screw Co., Chicago. The speakers of the evening, being seated in the immediate vicinity, included Judge Marcus Kavanaugh, Wilson G. Smith and Charles S. Thornton. An excellent orchestra of several pieces furnished suitable music for the occasion. The tables were decorated handsomely with flowers and ferns and other floral embellishments, the decorations of the banquet hall being the national colors. The affair passed off in a very satisfactory manner, every one present enjoying himself to the utmost.

The Street Car of the Future.

In business, as in warfare, contestants seldom evidence great care in estimating the strength of an opponent they do not fear. That the electric street railway interests of America are focusing upon automobilism a fierce light of investigation is, therefore, of considerable significance. It will be remembered that when the interurban electric lines a few years ago commenced their inroads upon the province which had up to that time been the exclusive property of the steam roads, the projectors of the former asserted that there was a place for both, and that by reason of its work as a "feeder" the electric interurban system would prove a valuable adjunct to its predecessor in the transportation field.

Now, a third factor is steadily and rapidly advancing to claim a place in the field, and also to aid in its development. All that was urged in favor of the trolley system in relation to the steam road may be claimed for motor vehicles in their influence upon both. The new mode of locomotion will assuredly draw to some extent from the patronage of each of its competitors—principally, of course from the electric lines—but, on the other hand, it will quite as surely as did the interurban trolley, open up new lines of communication which will bring revenue to all transportation interests in greater or less degree.—*Automobile Magazine*.

All watches are said to be compasses; point the hour-hand to the sun, and the south is exactly half way between the hour and the figure XII. on the watch; for instance, suppose it is 4 o'clock, then point the hand indicating IV. to the sun and II. on the watch is exactly south.—*Ex*.

The Custom of Dating Ahead.

"A matter which within the last fifteen or twenty years has crept into the methods of doing business" is that of dating. Before the credit men had their last convention a conference was held by the dry goods merchants, and the subject was considered of such importance that the chairman of that committee deemed it wise to nominate three gentlemen for the purpose of looking into the question, to see if a remedy could be devised, and, if so, recommend suggestions at the coming convention.

"I believe the question of dating can be well put into three classes. We have a certain class of merchants who ask dating for the purpose of anticipating, knowing full well that money may be had from time to time at a less rate of interest than 6 per cent. per annum. They are good enough in anticipating our bills to charge us that legal rate of interest, while our money is worth probably 2 or 2½ per cent. Another class actually requires the time. Then comes the third class; dating or no dating, they will "stick" us if they get the chance. A most serious question for the credit men, and one hard to decide, is what is a reasonable dating, and what is the customer, under certain circumstances, entitled to?

"I do not believe it would be wise at this time to make such a radical change as to entirely remove the dating from the commercial methods of business, as it has now become chronic. However, if we stand together and invite the Merchants' Association to assist us, we shall be able to reduce the period. Years ago dating was essential. Its origin was probably largely due to the request made by customers on the Pacific Slope, to be put on the same plane as Eastern merchants—that the loss of time in shipment should not be charged to them. Subsequently merchants generally were good enough to ask for a like benefit. In the present prosperous times we cannot conceive why we should still adhere to that principle and allow the retailers to have the benefit of our capital. The time has come when we feel justified in charging the merchant with a part of the burden of conducting his own business instead of throwing the entire burden upon the manufacturer or importer.

"If we cannot succeed in reducing the dating by other means we could do so by reducing the rate of interest allowed for anticipations. The merchant will not anticipate his bills, will not deprive you of the capital that you are entitled to in conducting your own affairs, if you reduce the rate of interest, to say four per cent.

"If you insist upon thus reducing the rate, or if you cut down the dating, I am satisfied that in course of time there will be no question of dating such as is given now in the woolen, millinery and other lines. In course of time it will be reduced by from thirty to sixty days at least, and the customer will then be obliged to take some of the burden which devolves upon him."

HUGO KANZLER.

Record Shooting.

A new record in target smashing was made in New York when J. S. Fanning, shooting on the roof of Madison Square Garden during the Sportsman's show, scored 175 broken birds without a miss. This wonderful shooting was done in a continuous match (a miss and-out affair), where, after the tenth bird, Fanning was shooting alone, the other contestants having dropped out. From this on it became a test not only of skill, but of physical endurance as well, as there was no opportunity for rest, the marksman walking from one score to another, and shooting the instant he reached the point. Mr. Fanning was in excellent form, and might have continued breaking targets indefinitely had there been an opportunity for him to get a few minutes' rest. As it was he had become so wearied that the 176th bird was lost through sheer inability to longer direct the gun.

Mr. Fanning is now in the employ of the Laffin & Rand Powder Co., of New York, and at the time was using a charge of forty grains Laffin & Rand Shotgun Smokeless, with 1¼ ounces 7½ chilled shot; factory load, put up in 2½ inch shell, and with ordinary black-edge wadding.

In this connection an interesting feature is that the ammunition used in making this new record was loaded two years ago, and during the entire time was stored on the barge of the Laffin & Rand Powder Co. in New York Bay. That it had been exposed to a great deal of dampness during this length of time was evidenced by the fact that many of the shells were so badly swelled that it was almost impossible to get them in the gun. This old ammunition, however, was used purposely, in order to prove the assertion of the powder maker that Shotgun Smokeless is not affected by dampness, by age, by heat or cold, nor by climatic changes. The proof was certainly conclusive, as there was not a faster or more uniform load used during the tournament. The targets were literally snuffed out, leaving but a puff of dust, while there was not a hang-fire or a slow shell in the entire number of 3000 used by Mr. Fanning during the Sportsman's Show.

Jack Fanning is well known throughout the West, and has received congratulations from all over the country, not only on his excellent shooting, but also on his connection with the Laffin & Rand Powder Co.

Referring again to the score made by him, it may be said that this was not the longest run ever made on targets, but it is the longest ever made under conditions requiring the marksman to shoot alone and to shoot continuously without rest until missing, and it will be a long time probably before any such score is again recorded.

The Carnegie Co.'s Coke Pile.

The Carnegie Steel Co., Ltd., away back in 1893-1894, began the stocking of an immense quantity of coke at the Edgar Thomson works of the company, and during that period accumulated close to 200,000 tons of coke along the edge of the property abutting on the Pennsylvania Railroad tracks. Passengers passing the works expressed regret that a good view of the plant was cut off by the great height of the coke pile. The Carnegie concern, upon careful examination, decided that the quality of the coke would not be impaired by long exposure to the elements, and it has even been asserted that if anything the quality has improved. Occasional tests were made by the company to ascertain whether any deterioration had occurred in this respect, with the result that it was found that for about the depth of four inches the coke had suffered slightly in quality, but that it was not serious enough to cause anxiety. The company stored this huge amount of coke when the steel business was extremely dull and prices of coke correspondingly low (90 cents per ton at ovens), and for the purpose of having a large supply on hand in event of strikes. Owing to the great scarcity of the car supply, and in order to accommodate its customers, the company is now using this stocked coke in the blast furnaces of the Edgar Thomson works. The wide difference in price at the present time is vastly in favor of the company. Taking into consideration freight and interest charges, the margin of profit on 180,000 tons of coke will net the company at least \$300,000, based on present price. From 500 to 600 tons are being used daily from the stock pile, which will supply the furnaces for a year to come.—*Chattanooga Tradesman*.

Among the South Sea Islanders, for a long time after their acquaintance with Europeans began, all values were expressed in axes.

The inland traffic on the rivers and lakes of the United States is larger than that of any other country.

HARDWARE TOPICS BY THE WAY.

The over-driven engine may ditch the whole train.

When the trickster makes a sale, the buyer is sold.

The present steel factors are hard pressed for labor.

It isn't the noise of the powder that penetrates but the force.

When the outlook is encouraging, the look out may be asleep.

The new coke advance will certainly not reduce pig iron prices.

Faith worketh patience, but patience often worketh impatience.

When freight traffic agents meet shippers grow pale behind the ears.

Trust promises may be as good as gold, if you have foreclosed the gold.

It doesn't imply that New Jersey wire cloth is exclusively meant for Jersey cows.

A man advertises a non-drop-out caster, without casting reflection upon his veracity.

Trusts are not multiplying very fast now. But then, air and water congeals in winter time.

Some people excuse stealing by the plea that they wished to anticipate the other party to the steal.

Scarcity of rolling stock is sometimes merely a paraphrase to bull the more direct charge of discrimination.

Orders are coming in lively, and are chiefly of the discount order. This adds only increased zest to traveler and shipper.

When the trusts once command the railroad facilities, bobtail railroads and bobtail manufacturers may reverse commiseration.

The latest trade name for automobile is automocle, which is probably a contraction of automobile and vehicle. English, you know.

Strikes do not endure long these days. There are too many men willing to work at the wages now being paid in the metal branches.

A species of insanity seems to be rampant in money-mad circles. There hasn't been a get-rich-quick-fly-by-night sensation for some time.

What's the matter with putting tool chests on wheels. Carpenters have carried their "cross" long enough. Automobilize the tool chest.

The stationary bicycle grindstone is certainly up-to-date, but why not augment it by an automobile grindstone. The ambulant grinder looks decidedly antiquated.

Of all retailers' associations, the Hardwaremen stand first as regards organization of both business and social elements. Cohesion seems to be their stock in trade.

England is receiving a "fontein" of information from its

South African unpleasantness without giving the untutored "kopje" of the war correspondents to the world at large.

A ladder that is also a step-ladder is an up-to-date desideratum. It's here, but there could be others. Cleveland claims priority of the idea, and the idea looks well in wood.

"Japanese" ware may be refashioned by fashionable ideas by turning modern female headgear into flower pots, using the graceful tailor-made female form divine as the stand.

Don't forget this is a presidential year, with its quadrennial scruples, but don't borrow troubles ahead. The people are so busy now they have almost forgotten about politics. All's well that ends well.

A Western detective bureau advertises for the capture of some unknown rat or rats that gnawed through the floor of an office, thus tumbling the safe into the cellar, where a chance burglar finished the job.

Work with consideration for your mental and bodily well-being. The newspaper of to-day is a chronicle of murders and disasters all due to money-mania, superinduced by families living beyond their means.

Cuba won't amount to much in a manufacturing sense until her mineral wealth has been developed and her coal mines become self-sustaining. Colonies that must look for fuel to the mother country are simply farm land.

"1900 styles of Hardware specialties." Thus reads the title page of a catalogue. Of course, not many took the time to certify the number, but wouldn't it be just as well to change the reading to Hardware Specialties for 1900.

A line of serviceable scales at moderate price is what every retailer wants. That standard scales at a moderate price can be produced in this age of trying to suit every demand, goes without revolutionizing the scale industry.

The modern line of household refrigerators can hardly be improved upon. It suits all classes and all tastes, but, of late, the better demand seems to fall to devices which are detachable, and thus admit of practical ventilation and cleaning.

It may be well enough to tell people how to do the Paris Exposition with a certain amount of money and pre-knowledge of customs and *savoir faire*, but an unlimited letter of credit would be the best assurance of unrestrained enjoyment.

S. J. Gilbert, the Arkansas City moralist, says: "Have your whole life (except your soul) in your store." Methinks a business would go into a dry rot without the *corps d'esprit*—which is the soul. No success is possible without a will, and there is no will without a soul.

McKinley is right in that standstill means retrogression. But "British" expansion is both expensive and murderous. If we would take the money that is being expended for war preparations and in war, we could buy all the colonies needed to satisfy our insular trend of possession.

A Western Hardware dealer keeps a boot-blackening stand in front of his store for the accommodation of his customers, chiefly to advertise blacking, polishes, oils and

cobbler sets. It's operated by a black and mulatto, whose trade-mark, "Black and Tan," is a subject of current wit.

The Hardware manufacturing industry of Cleveland enjoys the brightest outlook in years. The ordinary demand would keep all factors busy without resorting to vigorous trade campaigns. It is not often orders are refused and made presents of to minor competitors; but such things happen now.

Many of the projected railroad improvements and building enterprises have been filed away owing to the balloon prices quoted for material. It will be at least another twelvemonth before productive capacity will have outstripped the elements tending to subjugate the market to speculative manipulation.

The gate is down, but the fence is up in Chinaland. America has nothing to seek there but commercial favors. The country is mortgaged to Europe and practically foreclosed. Uncle Sam would only play second claimant there. America must confine itself to Pan-American expansion if she would not share the lot of Spain.

Conditions continue optimistic, especially for those with a "cinch." And the pig iron cinch seems to slug them all. It is "steeling" moves on the market right along. You don't see it moss grown lying about nowadays. The rusty-brownesque stacks scattered by the railroad tracks like cordwood have long since been picked up, even to the stray slugs and changed into gold-standard bank accounts. Along in '94-'95 it wasn't worth ballasting tracks with to somebody.

A "new" economist predicts the early decadence of the middleman or jobber. The obliteration of the jobber may be advisable in certain trades, but the Hardware trade would be at sixes and sevens without this medium. Certain manufacturers have tried to do business without the jobber, but they experienced that they were losing ground. The time when manufacturer and consumer will do business without intermediaries is distant. The dream of such a co-operative business brotherhood could only be realized out of the chaos of a prior downfall of the entire commercial establishment.

JOHN B. RINDFLEISCH.

Cleveland, Ohio.

Iver Johnson—John P. Lovell.

For twenty-five years the Iver Johnson Arms & Cycle Works manufactured firearms, bicycles and police goods for the John P. Lovell Arms Co., the old Lovell Diamond bicycle always bearing the name of the Fitchburg concern as its maker, and on the strength of the quality of these goods the Lovell reputation largely rested.

About five years ago the relations between the two concerns were ruptured, the Iver Johnson Arms & Cycle Works bringing out the now famous Iver Johnson bicycle, and marketing same direct, together with their revolvers and guns—already of world-wide reputation.

The Iver Johnson Sporting Goods Co., jobbers in all goods known to the sporting trade, have purchased the remaining stock, fixtures, good-will and store-lease of the retail and jobbing business of the John P. Lovell Arms Co., at No. 163 Washington Street, Boston, and will remove to and occupy the entire Lovell building on April 1st.

The importance of this transaction can best be judged from the fact that the John P. Lovell Arms Co. has always claimed to be the largest exclusive sporting goods company in the country; and, as in addition to their present store in Boston, the Iver Johnson Sporting Goods Co. own and operate large stores in Worcester and in Fitchburg, Mass., this latest move, by combining the Iver Johnson Sporting Goods store with that of the Lovell Co., places

them in the position of being by far the largest exclusive sporting goods concern in the country.

The progress and growth of this company has been little short of phenomenal. Originally organized in Fitchburg, they gradually extended their field of operations, embracing Worcester first, and finally entering the Boston market about four years ago; there they located first on Boylston Street; but so rapidly did the business grow that a more central location was deemed necessary, which was found at Nos. 406-408 Washington Street, in the heart of the shopping district. This removal, by the way, set many tongues wagging, and many were the doubtful shakes of the head among the wiseacres, who contended that a sporting-goods store in such an expensive location could never be made to pay. The confidence of the company never wavered for an instant, however, and the results more than justified the step; for, by putting in a magnificent stock, which they supplemented by vigorous, up-to-date business methods and push, backed by ample capital, the venture was not only made to pay handsomely, but it has run almost all the company's competitors off their feet.

Thus the name of the younger concern succeeds the older: "Iver Johnson Sporting Goods Co., Successors to John P. Lovell Arms Co." will now appear at No. 163 Washington Street, and thus once again, the names of Iver Johnson and Lovell are coupled after a separation of nearly five years.

As the trade, generally, is aware, the Iver Johnson Sporting Goods Co. is "backed by the factory;" but this really consists mainly in the prestige the name gives, for the Sporting Goods Co. stands firmly on its own feet, and with a growing and prosperous business, requires no backing, being numbered among New England's financially soundest houses.

The Iver Johnson Sporting Goods Co. has handled not only all the lines which the Lovell Co. has had, but several additional ones and they are the largest jobbers in all sporting goods, so that they cannot only take care of the Lovell trade and their own custom, but also a largely increasing business.

Luminous Paint.

In reply to numerous inquiries as to a luminous paint for signs that will glow in the dark we give the following formula for manufacture, taken from the *Mechanics' Handbook*: A quantity of oyster shells is first cleaned in hot water and put into a brisk fire and left until they have been thoroughly glowing for half an hour. Take out and allow to cool slowly. When quite cold grind to a fine powder, taking great care to remove all gray particles. The powder is then placed in a crucible; a very thin layer at first, then a thin layer of flour of sulphur, thus alternating until the crucible is full. Cement the cover on, and when cement is dry the mass is baked one hour in a hot fire and then allowed to cool slowly. When the crucible is opened it is advisable to remove any gray particles still in the mixture, as they are not phosphorescent. The mass is then sifted through a piece of fine muslin, and the powder which passes through is dissolved in lime water. This solution is then applied with a brush to a sign, two thin coats being sufficient—in fact are better than heavy coats. Ordinary signs, if properly lettered, may be covered with this solution, which will not be visible in the daytime, while the portions covered with the above mixture will emit a beautiful phosphorescent light in the darkness — *New Ideas*.

Mother: Willie, didn't I say I'd whip you if you put another rubber button on the stove?

Willie: Yes'm; but 'taint me this time, ma. It's pa smokin' one of them cigars you bought him for Christmas. — *Chicago News*.

THE PAN AMERICAN EXPOSITION, 1901

THE SERVICE BUILDING

The Service Building of the Pan American Exposition, to be held at Buffalo, N. Y., on the Niagara frontier, from May 1st to November 1st, 1901, was the first building of the Exposition to be erected, and is used by the corps of officials and employes having direct charge of the constructive work of the Exposition.

The building, which is situated on the west side of the grounds, is 95x145 feet. It is in the form of a hollow square, having two stories on its exterior facades and three stories on the court side. The entrance, which is in the form of a driveway, faces the north, and communicates directly with the inner court. Part way down this entrance, and from each side extend the main corridors.

On the second floor is the large draughting room, used by the force of architectural draughtsmen. This department has separate offices and draughting rooms, with a large vault for valuable drawings. On this floor are the sleeping apartments of the Director of Works and the chiefs of the various bureaus comprising the Department of Works. Here also are numerous apartments for such of the employes as the nature of their duties requires to be continuously at the Exposition grounds. A kitchen and dining room, apartments for the janitor and hospital nurses, and several guest chambers are provided on this floor.

The top floor of the building has additional apartments, a large blue-printing room for the use of the architects and

THE SERVICE BUILDING

That on the right leads to offices and apartments to be used for police headquarters and hospital service, including the rooms for the use of the Commandant of Police, police station, the Chief of the Fire Department, medical waiting room, drug supplies, offices for a surgeon and his assistants and an operating room. The hospital has a porte cochere entrance for ambulance and emergency purposes.

The other portions of the first floor are taken up by a large room for the officers and clerks who have charge of admissions and collections, and the auditing of accounts; these rooms being fitted with fire-proof vaults.

The working offices of the Director of Works, with his private office and stenographer's room, offices for the Landscape Architect, the Superintendent of the Building Construction, Purchasing Agent, Chief Engineer, Mechanical and Electrical Engineer and accommodations for the officers having charge of transportation and installation, exhibits and concessions, are arranged to carry on the business of these departments.

engineers' departments, and the operating rooms for the official photographer of the Exposition.

The building has a cellar. Frame construction has been used throughout. The studs are covered on the inside with composition board and sheathed on the outside with hemlock planks, which are covered with cement plaster, the final finish having the appearance of stucco.

The ornamental work, including the flag standards, finials, festoons, etc., are of staff. The roof is covered with Spanish tile of iron. The building is in its architecture a free adaptation of the Spanish Renaissance, such as is shown in old Californian and Mexican missions and churches. This style was followed as closely as the requirements and exigencies of arrangement for light and space necessary in a first-class working office allowed.

The building was erected ready for occupancy in thirty-two working days.

PROGRESS OF THE WORK ON THE EXPOSITION GROUNDS TO
JANUARY 20, 1900

Work was begun on the site September 26, 1899. Since

that date the land has been cleared of fences, 2400 small poplar trees, 1200 willow bushes and 700 assorted shrubs have been planted about the border of the grounds. A boundary fence has been built eight feet high and twelve thousand feet long. A nursery has been prepared and several thousand trees and shrubs have been placed therein. Seventy-five large trees have been transplanted from points in the site to avenues on the border on the grounds. Some 10,000 cubic yards of top soil have been scraped, piled, mixed, and turned over; 4000 yards of excavation has been removed from the East lake; two greenhouses, 20x80x10 feet, with propagating houses adjoining, have been built, and a number of cold frames have been set out.

The grounds have been cross-sectioned; buildings, canals and roads have been staked out; 13,000 feet of sewer have been constructed; plans for fire mains and domestic water supply have been completed; route for intramural railway has been surveyed, and from 4000 to 5000 feet of canal, which encircles the grounds, have been excavated.

Two thousand large poplar trees and maples have been received and prepared for early planting in the Spring. 250 monumental cedars have been prepared, boxed, and are now awaiting Spring before being shipped from New Jersey.

Plans have been completed for the foundations of the Agricultural Building, and complete plans for machinery and transportation, one of the large buildings—350x500 feet. Bids for all the main buildings will be invited at an early date, and even before Spring of this year much progress in the constructive work will be made.

The Mica Mines of India.

Messrs. Holland and Hayden, of the Geological Survey of India, have just completed an official examination of the Hazaribagh and Gya mica mines on behalf of the Government of India. Bengal still holds the first place in the world's production of mica. Not only does it produce the largest amount of merchantable mica, but the quality is unapproached by any of the other mica-producing countries. Last year the official returns of the port of Calcutta show an export of 986,000 pounds, valued at 962,000 rupees, or about one rupee a pound. Madras exported 446,000 pounds, valued at 188,000 rupees, or about seven annas a pound. The only other country yielding mica is Canada, which last year produced 150,000 pounds, valued at four pence per pound. The export figures for Calcutta do not show the entire produce of the Bengal mines, but merely the quantity sent away by sea. When it is remembered that the Hazaribagh Mines alone employ 5587 persons (Mr. Grundy's official report) and that mica is easily mined and can be had in large quantities, it would be well within the mark to say that the exports represent only one-half the production. Large quantities, chiefly of the inferior kinds, are sent to Delhi, Lucknow and Benares, where the mineral finds a ready sale for the manufacture of the cheaper kinds of tinsel ware (imitation). Great Britain, Germany, and the United States are the chief buyers, as mica is indispensable in the manufacture of dynamos. Large sheets of ruby mica are used as covering for the peep-holes of the furnace where extreme heat is required; its well-known property of imperviousness to radiant heat and its combustibility making it invaluable for this purpose. The best glass would melt if subjected to the same amount of heat. Mica may be rived into sheets so fine that 1000 such sheets will only make up a thickness of one inch. Each of these films is a perfect insulator of electricity, which renders the material valuable in the manufacture of secondary batteries. The bulk of the mica as mined in Bengal does not answer these requirements. In fact, not 5 per cent. of the mica brought to the surface has been utilized, and great mountains of "waste" are to be seen adjacent to all mines.

Just now a demand has sprung up in America for this "waste." Large quantities of it are used in the manufacture of "micanite," a species of cardboard in which films of mica take the place of paper. The mica sheets are split into films of about one-five-hundredth part of an inch thick, and these are cemented to a jute web. Several thicknesses of films are used, and the whole passed through rollers. A semi-transparent sheet resembling linoleum is produced, and from this any shape of plate can be cut, to suit the fancy of manufacturers of electrical machines. Recent experiments in America have shown that mica films answer better than asbestos as boiler-packing. The air-spaces between the films of asbestos allow of the escape of a certain percentage of heat. The mica being in thin flexible plates, there is less air-space, and consequently less escape of heat. Boiler-packing of pure sheet mica gives 30 per cent. better results than asbestos. The usual practice of grinding the mica to a powder and mixing it with large quantities of clay and waste cotton has been abandoned, and mica films alone are used to coat boilers and steam pipes, the films being kept in place by wire or twine wound round the boiler or pipe. As a packing for ice boxes, mica waste is unrivalled, as it is far cleaner than saw dust or cork, and is a far better non-conductor of heat. Large refrigerating installations are surrounded with chambers of mica waste, which keep in the cold as well as throw off radiant heat. But the demand for mica waste for boiler packing and for refrigerators, although large in itself, falls far short of the demand that may spring up for this material for ceilings for warehouses and all iron buildings in tropical climates. The well-known property of mica—its imperviousness to radiant heat—renders it the best possible substance for the ceilings of all iron roofing, as this mica ceiling throws off the intense heat of the iron when it becomes hot during the day. A quarter-inch layer of mica waste, placed between common matting and nailed under corrugated roofing, is said to lower the temperature of buildings covered with this material by many degrees. If these experiments can be relied on, then there may be a great future for the mica industry of Bengal, as the amount of mica required for iron-roofed buildings, as well as those covered with tiles, would be enormous, and a ready sale would be found for the bulk of the yield of the mines which is now regarded as valueless.—*Hardwareman (Eng.)*

Keeping at It.

In the opinion of a magazine writer the man who aims to sell to people whom he cannot reach personally is the man whose advertising must be the most carefully planned and the most thoroughly executed. He must have a perfect system of following up enquiries. He must never let a man forget him after that man has once shown an interest in his proposition. Orders rarely come with the introduction. They are the result of frequent visits. The more frequent the visit the more likelihood of the reception of an order. It works the same way in advertising as it works in selling through salesmen. A very good advertisement may catch at once; same way with a salesman; but more often the frequent visit of an advertisement, a little different each time, like the persistent salesman, gains the permanent trade.

The Freihaus, in a suburb of Vienna, is the most spacious building on the globe; within its walls a whole city of human beings live and work, eat and sleep; it contains in all between 1200 and 1500 rooms, divided into upward of 400 dwelling apartments of from four to six rooms each; this immense house has thirteen courtyards, five open and eight covered, and a large garden within its walls.—*Ex.*

Since the great earthquake of 1801 no less than 1110 and 2025 shocks have been experienced in Nagoya and Gifu respectively, two provinces in Japan.

N. E. IRON & HARDWARE ASSOCIATION.

The New England Iron & Hardware Association held their seventh annual banquet at Young's Hotel, Boston, Tuesday evening, March 20th. It was absolutely the most important and successful banquet in their history, surpassing all previous gatherings of the Association in every respect. At the reception previous to the dinner which was given in the parlors of the hotel, the guests present were introduced to each other, and by the time the banquet commenced good fellowship was the prevailing sentiment, and it seemed as though everybody felt perfectly at home.

Promptly at 6 o'clock President Doten, accompanied by the special guests of the association, Rev. Edward A. Horton; John Bindley, president of the National Hardware Association; T. James Fernley, secretary-treasurer of the National Hardware Association; Admiral William T. Sampson; Lieut. E. L. Bennett, U. S. N.; Henry B. Lupton, of the American Steel & Wire Company; Robert A. Boit, president Boston Associated Board of Trade; Charles E. Adams, president of Massachusetts State Board of Trade; Walter C. English, Boston manager of *The Iron Age*; W. C. Brundage, of *Hardware*, Henry C. Pierson, president Western New England Iron and Hardware Association, and George W. Burditt, president New England Hardware Dealers' Association, and the entire company proceeded to the banquet hall, which contained five tables handsomely decorated with floral embellishments. By aid of a printed diagram each guest found the place he was entitled to.

Three were 125 seats at the tables, and they were all occupied. Each guest was provided with a book of familiar and popular songs, quite a number of which were sung by the company between the courses of the dinner, and prefacing the addresses which were delivered by the invited guests. Popular music was given by an excellent orchestra throughout the dinner, and did its share towards increasing the enjoyment and comfort of all present. At the conclusion of the dinner, after coffee had been served, President Harry L. Doten called to order those assembled and delivered an address, from which we make the following extracts:

In looking over this large gathering of our members and guests I cannot help comparing the number in attendance to-night with our past annual dinners, and why is it so? It is because the jobbers of New England, with the assistance of this association in connection with the National Association, have been brought together in such close relations, by frequent meetings, monthly and yearly dinners, that they have become better acquainted with each other, and have each other's confidence, and to-day our association is stronger, not only financially, but stronger in the feeling that its members are all working for the common cause, and selling their Iron, Hardware and Wooden Ware at a profit, basing cost on market values and not on old contract prices, and this could not be done in New England to-day, as past history has shown, except by being closely identified with each other.

Some people have said that it was impossible to do business in our lines last year without making money, but without the assistance of this association could we have made enough, and would the question ever have come up? Is it not wise for us to prepare for the years of decline, which must eventually come, by charging off a portion of the profits of 1899 to a special account, to take care of the years of depression, when we have a low range of prices, with Steel Billets at \$14 instead of \$35, as now, and an expense account double in percentage of last year?

The New England business men are very conservative, and I sometimes question if by their extreme conservatism

they do not allow good business to be placed in New York and elsewhere that rightfully belongs to us.

We are all aware that the New England jobber is gradually having a wall built around him, so that it is almost impossible to do any business west of the Hudson river.

It is only an imaginary wall, but is nevertheless a fact. Is there not some way we can overcome these difficulties and have a broader field to market our goods?

We have, however, been particularly fortunate in having as a member a gentleman who has the happy faculty, as I have heard it expressed, of introducing the guests of the evening and making them feel that inspiration which enables them to entertain and instruct their hearers. I now have the pleasure of introducing as toastmaster of the evening Charles Clark Adams.

Mr. Adams, admirably fitted for the position of toastmaster, among other things said:

I thank you for your kind and gracious introduction, and congratulate the Association on this magnificent attendance, it being the largest gathering we have ever had.

As I look around and see this fine body of business men, it is, indeed, a pleasure to realize that my life work has been in the iron and Hardware trade.

Now that the country has learned that present prices are to be maintained for some time to come business has taken on a new movement. Lumber is looking up the last few weeks. Twenty-three hundred miles of railway are being projected, which means the expenditure of fully \$92,000,000. Building operations are being projected. All these items are of interest to our trade and its kindred lines; therefore, we have a right to be hopeful, and labor on to receive our share of the great results.

A word about Hardware. It seems to me that one fault of our trade has been the persistent manufacture and pushing of low-priced goods. This country is growing so wealthy and strong that a demand is growing up for better goods, heavier and more durable. It is not a pleasant thing for Americans to read that an American Consul writes his Government that bicycles, for instance, are being made and sold in a foreign market at such cheap figures and poor quality that the trade refuse any longer to have confidence in them; and where the American goods at one time had the preference, to-day the trade shun the goods; a market once gained and then lost. This is not good business principle. I am told that this fact applies as well to other lines.

He then took pleasure in introducing John Bindley, president of the National Hardware Association, who was to respond to the toast of "Hardware," which he did in a very interesting address, from which we make the following extracts:

THERE IS A VAST DIFFERENCE

in the variety and extent of the stocks carried by the average jobbing house of to-day and the stocks that were carried by the same class of merchants two generations ago. By comparison we must surely be expansionists in the fullest sense and meaning of the word.

In the olden days it was truly "Wares made from metal," and the lines carried were quite limited in comparison with what seems to be essential in this day. An ordinary warehouse was then sufficient not only to hold the stock, but also to transact the business of a large jobbing house. How is it now? We have many establishments in our country whose warehouses cover acres in area of floor space, and constantly expanding with ever increasing facilities; daily adding new and improved methods that place the jobbing houses of to-day in a position far in advance of their predecessors who preceded them by a few decades, and the Hardware merchant of the present compares favorably with those engaged in any other line of business.

In the early days (and in some parts of the world it is still so to a certain extent) the wares or goods were (and are) made by small factories, and by individuals, who did their work at home in a little shop, often attached to their dwelling. The product was carried to the factor, who was the distributing agent. With the growth and development of our country came greater demands; to meet this increasing trade and to better control the output came the factory; then followed machinery, reducing the cost of each article, all of which largely increased consumption. In the onward march factories were built with the view of greater production of any certain class of goods, so that with the latest improved machinery the articles were produced at an extreme minimum cost, thereby not only stimulating the consumption of the particular article, but also controlling the trade at the same time. Under these new conditions production was greater than demand; this in turn brought about depression in trade.

* * * *

The intelligent, capable manufacturer who had the interest at heart of those who invested the capital, as well as of his employees, realized his factory could not close down indefinitely if he were to obtain the best results. It was essential to give fairly steady employment to his employees, for their comfort, satisfaction and happiness, as well as to secure standard quality of product. These continually advancing conditions brought about competition that was destructive, but owing to the large investment, unless a remedy was found it was likely to continue indefinitely. The solution as applied to correct the trouble was the creation of trusts, combinations of capital or consolidations of interests. The result is practically the same, call it by what name you may. The results are that in many lines of manufactured goods there is only one manufacturer, and we are confined to one source of supply.

* * * *

These are the conditions that confront us now, so you can readily perceive the necessity for the merchant of this day to study closely the causes and effects, that he may have a thorough understanding of the necessities of the new conditions, to the end that he may be able to meet any and all exigencies as they arise.

* * * *

New methods to meet the new requirement were devised, one of which was the formation of the National Hardware Association. You know how well it has fulfilled its mission, accomplishing more than its most ardent supporters could anticipate for it. We soon learned to have a high regard for our competitor; through association and by contact we discovered that his motives were pure; his desires to elevate his business; his efforts to so conduct his affairs that the best and most approved standard could be obtained. Explanations, with an understanding of the motives that caused each to reach conclusions, swept away doubts and suspicions, so that confidence in each other asserted control, and we are now diligently, earnestly and honestly following that banner which was to lead us onward and upward, and upon which we inscribed, in the early days of our association, the motto: "A High Standard of Business Methods."

* * * *

In the early stages of our association we placed ourselves on record as opposed to unreasonable advances in the prices of the goods which we handled. We took the position then, and we insist on it now, that, while the manufacturers should have a fair return for their investments, it must be a reasonable one, and that we will not aid and support them in asking prices that seem unreasonable. We feel that we have a duty to perform and that we stand between the producer and the consumer, and while the former should have a fair return for his investment, the consumer should get his goods at a price within reason and justice.

* * * *

Local associations are the outgrowth or offspring of the National Association. To attain the greatest benefit it is essential that they should be in good harmonious working condition, and it becomes the duty of each and every one of us to lend our aid and encouragement, in order that the best results may be obtained. It is not proper for any one to visit upon his co associate reflections, to the end that his conduct does not produce the best conditions, but we must each bear and forbear, give and take, honestly and unwaveringly toil for and expect higher attainments in this cause that is so manifestly our own.

* * * *

Your local association is your hope. Support it honestly,

thoroughly, vigorously. If this work is done faithfully and well you are supporting the national organization, and we will continue to reap the good results of past efforts, as well as to advance, uplift and place our Association upon the high pedestal that we are all so ambitious for it to secure—namely, that the standard of business methods shall be higher and higher until perfection is attained.

Mr. Bindley was followed by Robert A. Boit, president of the Boston Associated Board of Trade, who, in the course of his remarks, spoke on the value of the Associated Board of Trade as a manifest and constant aid to the bodies of merchants represented in it. Twenty-four associations send delegates to it to-day. What the concentrated organization needs now, he declared, is more earnest, capable delegates, fit to hold places on committees which are to deal with questions of local and national importance—such as the Cove street bridge, improvements in streets in the congested districts of the city and the duty on hides.

Mr. Adams then introduced Admiral Sampson as the principal guest of the evening and the hero of Santiago. The Admiral was received with a very gratifying welcome from all present, and spoke briefly on the necessity of the merchants of Boston using every effort to secure appropriations for the betterment of the harbor. New England as a whole, he felt, would benefit more by this in the long run than by spending money in improving creeks and rivers. The congress of Massachusetts should especially see to this, so that Boston would become one of the great ports of the world and thus benefit New England as a whole.

He spoke of the time about 150 years ago when England prohibited the manufacture of steel in the colonies, and then of to-day, when the United States made the best armor and the best guns in the world.

Rev. E. A. Horton, who followed the Admiral, was introduced as one of the men who had served behind the guns in the civil war in the navy. He paid a fine tribute to Admiral Sampson and to the men behind the guns in the late war, and he felt that the nation was big enough and manly enough to carry the flag as a benison of hope and light to other people.

He lauded the sturdy New England and American character, which glorified work and which thought for itself; on these things the strength of the nation depended.

Later in his speech Dr. Horton took up the business growth of the city of Boston, and predicted that if there should not be voluntary action on the part of suburban people, the Commonwealth would yet take into the confines of Boston the municipalities of Brockline, Cambridge and the Newtons—because these communities have their chief business interests in Boston, but Boston is without their revenue for taxation and without their votes.

Henry B. Lupton, of the American Steel & Wire Co., Pittsburgh, then followed, and made a brief address, after which the evening's entertainment was brought to a conclusion by the well-known secretary-treasurer of the National Hardware Association, T. James Fernley, who in his characteristic manner made a number of interesting remarks during which he congratulated the New England Association on its great success, and assured them that the National Association which he represented could be invariably relied upon to uphold local associations of this character in their relations with the jobbing trade. It was nearly 11 o'clock before the banquet was brought to a close by the singing of "Auld Lang Syne."

♦

Some of the cleverest writing—the most painstaking, subtle work turned out by literary men to-day—can be found in the advertising pages of a first-rate journal. Every word is measured, examined under a magnifying glass, to see just how big it is, just how much meaning it has, and how many kinds of meaning it has.—*Munsey's Magazine.*

RECENT TRADE PUBLICATIONS.

PLUME & ATWOOD MFG. CO., No. 29 Murray Street, New York. Small pamphlet catalogue covering their line of acetylene gas lamps, and including the "Banner" and the "Automatic," together with the "Banner" carriage lamp generator and attachment. The "Banner" is also shown with a dashboard attachment, making it a very desirable lamp for the purpose, and in connection therewith illustrations are given of the "Banner" bracket, with full descriptions throughout.

THE BRIDGEPORT GUN IMPLEMENT CO., Nos. 313-315 Broadway, New York. Pamphlet catalogue of thirty pages, covering the B. G. I. line of golf goods, including balls, caddy bags, markers, direction flags and general golf supplies. The catalogue is printed and illustrated in good taste, full description being given of the various articles enumerated, and the manufacturers state: "We invite suggestions from amateur and professional golfers in regard to our goods, as we shall always endeavor to meet all special requirements without delay." Included in the contents, in addition to the articles enumerated, are pocket score books, rubber ball cleaners, grip handles, megaphones and horse-boots.

C. E. JENNINGS CO., No. 101 Reade Street, New York. Two-page edition of their catalogue, covering a line of special saws and saws etched to order, showing a line of goods that they are manufacturing, and orders for which are taken for special brands, including hand saws, kitchen, compass and key-hole saws, saw knives, etc. A full description is given of the different styles and kinds which will be found quite useful by the trade.

ALLERTON, CLARKE CO., No. 97 Chambers Street, New York. Catalogue of "Star" rotary electric-ring door bells, together with the furniture for the same, plain and ornamental. Included in the contents is a rotary steel door bell of ornamental design. This line of goods is made in all styles of finish called for by the Hardware trade. Included with the above is a 1900 catalogue and price list of bicycle bells manufactured and sold by this company, illustrating a large variety of plain and ornamental bells of this description, including the continuous ring, the rotary electric, and double and single stroke bells in large variety. Included in the assortment are fancy flag bells, decorated, chime bells, and a line of high-grade Imperial bells. The catalogue covers a very large line of this salable department of bicycle sundries, well worthy the attention of the dealers handling the same.

GOODWIN & KINTZ CO., Winsted, Conn. Pamphlet catalogue of forty pages of clocks, candelabra, bronzes, clock ornaments, umbrella stands, five o'clock teas, inkstands, etc. Printed on very good paper, handsomely illustrated, and representing in its contents a class of ornamental goods that are largely sold by other lines of business as well as the Hardware trade. In the stationers' department a fine line of inkstands is noticeable in very artistic forms. Their line of clocks is artistic in design, modern in style, and handsome in appearance, manufactured from the finest bronze, and some of which are hand-burnished in 24-karat Ormolu gold, a guaranteed finish of high grade. This is also applied to high-grade statuary made by this company, presenting a very handsome appearance. Included in its contents is a line of five o'clock teas and umbrella stands, in a variety of new and attractive styles.

STANLEY & PATTERSON, No. 32 Frankfort Street, New York. Pamphlet catalogue of "Matchless" electric cigar holders. A new and attractive line of these goods made in a variety of styles, and listed at prices from \$5 up, with special discounts according to quantity. It will, no doubt, be found a valuable addition to a Hardware stock.

O. LINDEMANN & CO., No. 81 Beekman Street, New York. Large size pamphlet catalogue, oblong in shape, covering the line of japanned, brass and tin wire cages for canaries and other birds, and including a full line of cage sundries. The line of goods manufactured by this old and well known concern has been before the trade for a number of years, and has been largely increased during the last few years, as is made evident by this 1900 catalogue. Full descriptions are given throughout, list prices being attached to the same, the trade discounts on which are liberal, and worthy the attention of the Hardware trade handling these goods. Included in the assortment will be found a line of mocking-bird cages, breeding cages and cage stands, parrot stands and cages, aviaries, squirrel cages and mouse circuses.

SCHOVERLING, DALY & GALES, No. 302 Broadway, New York. 1900 catalogue of the Gales, Duane and Leader cycles sold by them. The catalogue is printed on coated paper, nicely illustrated, covering this line of goods, with all the special parts, etc. Included with the above is a four-page circular of the New Eureka golf balls controlled by this house, which are illustrated and described with full particulars; also a catalogue of forty-four pages of bicycle sundries, which is a small catalogue photographically reduced so that it contains a large variety of goods in this line, net prices being attached to each item. This makes a very attractive and desirable catalogue for the dealer.

MONARCH SALES DEPARTMENT, American Bicycle Co., Chicago, Ill. 1900 catalogue of Monarch bicycles. Pamphlet catalogue of thirty-two pages, very handsomely gotten up, printed on superior coated paper, with fine half-tone illustrations showing the entire line in all its varieties. The catalogue is laid out on an original plan, by which the information is imparted through questions and answers, which makes it a very instructive catalogue for the agent, who thus becomes familiar with the detailed instructions so essential in the sale of bicycles at the present day.

GREENE, TWEED & CO., No. 17 Murray Street, New York. Pamphlet catalogue of forty-eight pages, covering their line of "Improved" Rochester automatic lubricators for stationary engines, marine engines, steam pumps, locomotives and hydraulic elevators. These goods are manufactured exclusively by Greene, Tweed & Co., they having purchased the controlling interest. The various styles and designs are illustrated fully, full descriptions being given of all the parts and adjustments, and the necessary instructions for their use. A large portion of the pamphlet is taken up in testimonials from those who have used them, and these testimonials having reference entirely to the trade of 1899, may be considered as up to date.

GRAND RAPIDS HARDWARE CO., Grand Rapids, Mich. Twelve-page booklet, covering their line of noiseless all-steel sash pulleys, which are described and illustrated in full. Being of envelope size, it is a good, small catalogue of these goods that can be readily distributed by the trade.

NEW GOODS AND SPECIALTIES.

Coates New Ball-Bearing Horse Clipper.

The Coates Clipper Mfg. Co., of Worcester, Mass., are bringing before the Hardware trade this season a new ball-bearing horse clipper, that is likely to prove an ex-

tremely popular addition to their line. In appearance it resembles their 59 clipper; the new style, however, is called their 159, ball-bearing. It embodies in its construction many new and important features not embraced in the 59 pattern, principal among them the ball bearings. The balls are secured in a hardened steel case which serves as a ball retainer and acts as a hardened steel bearing. The clipper is fully nickel plated and is handsomely and attractively gotten up, each clipper being furnished with a leather pocket which effectually protects the teeth from accidental breakage. The Hardware dealer who is abreast of the times should be sure to carry a full line of Coates Hair Clippers and to further this view, a complete catalogue with special discounts to the trade will be given for the asking at their home office No. 237 Chandler Street, Worcester, Mass., or at their New York office, No. 93 Chambers Street.

The Arctic Swinging Chair.

The Ohio Rake Co., Dayton, Ohio, are starting the season on this popular class of goods, and are placing before the Hardware trade the Arctic Swinging Chair, an illustra-

tion of which we give herewith. This is one of the latest designs of a swinging chair and hammock, and gives every indication of proving an exceedingly popular article to handle. It is so constructed that the occupant can assume any restful position desired. One may swing, sit up or recline as she may choose, requiring scarcely any effort on the part of the occupant, and no acquaintance with any previous adjustment of ratchets or levers. It occupies on

the porch floor a space about six feet long by three feet wide and six feet high. It is made of substantial material, with base of hard, dry wood, having steel arms and braces and an arch of steel tubing. As will be noticed, it is provided with a foot rest, which can be adjusted for the use of children or adults. It is nicely painted and varnished, and the canvas back is of durable material. It weighs altogether about forty-five pounds, is made to fold up very easily and is sufficiently portable to be moved from place to place without difficulty. It is intended to supersede the ordinary hammock to some extent, as it is considered to be quite cool and comfortable and occupies less space. When shipped it is entirely set up, and made ready for use by a simple adjustment of the thumb-nuts and two bolts. They are designed to be marketed at \$4 each, the freight being prepaid to any railroad station in the United States. Orders should be addressed to the Swing Department, Ohio Rake Co., Dayton, Ohio.

King Steel Spring Hinge.

The King Spring Hinge Co., No. 24 Johnson Street, Cleveland, Ohio, are placing upon the market the "Solid

FIG. 1.

FIG. 2.

Steel" Surface Spring Hinge, an illustration of which is given herewith. It is made entirely of high-grade spring steel, carefully tempered, and is regarded in consequence as being practically indestructible, having no wire spring to weaken or casting to break. The action of the hinge when properly adjusted is quick and easy, and will automatically close the door, or, if desired, permit it to stand wide open. There is no tension whatever on the springs when the door is closed, and even in that position the hinges can be taken apart and the door removed if necessary by simply pushing out the pins. They are made by the company in several sizes, and adapted for various uses such as screen doors and windows, cupboard and refrigerator doors, gates, etc. They can be finished in any style of bronze to suit purchasers.

Drake's Adjustable Acetylene Burner.

The Drake Acetylene Apparatus Co., No. 37 Hathaway Street, Cleveland, Ohio, are manufacturing Drake's Adjustable Acetylene Burner, which is illustrated by the two cuts in this article. It is so arranged that the flow of gas can be reduced and still have the full pressure up to the point where it is liberated. It can consequently be turned down from a full-size flame to one candle-power by means of the little valves, one of which may be closed entirely, and the other reduced to a flame as small as desired for a night light, and this can be accomplished without smoking, carbonizing or producing a sluggish flame. The diverging stems are so arranged that they can be turned into alignment in an instant. The points of the needle valves may be forced up through the little opening where the gas is liberated from the rear, thus removing any obstruction

without being obliged to extinguish the whole flame. The manufacturers state that the burner has been recently improved so they can supply them in sizes to consume one-half, three-fourths and one foot of gas when the little

FIG. 1.

valves are open full size. The burner is made in several pieces, any part of which can be supplied. The company, manufacturing as they do acetylene gas generators, are fully conversant

with the usual trouble and dissatisfaction that is caused by the varying utility of burners used in illumination that are not of the latest design, and their endeavor has been to improve this one in every respect, so as to make it almost impossible for an imperfect flame to cause it to smoke, stopping up the little holes, and causing the subsequent difficulty in again opening them. When it is considered how small is the size of the opening where the gas is liberated in the half-foot pressure, exposed as it is to all sorts of conditions, it seems no wonder that it becomes clogged up except under most intelligent use.

Goshen Four-Passenger Lawn Swing.

The Goshen Mfg. Co., Goshen, Ind., are manufacturing the seasonable specialty which we illustrate herewith. It is a lawn swing designed for four passengers. The swing has a seat space of 40 inches between the swing bars, so that four large people can occupy it without being crowded. It weighs 175 pounds, care being taken that the frame shall be extra heavy and strong. The operation of the swing is performed by the occupants alternately pressing gently with their foot on the foot rest as they sit in the seats. It is pointed out by the manufacturers that a swing motion can be so easily produced by this means that the occupants hardly realize that they are swinging themselves and furnishing the motive power. The chair-backs are made so that they can be readily adjusted to varying heights. The foot-rests can also be raised so as to adapt the height of the seat for its use by children, and in order that the swing can be folded perfectly flat for shipping.

it is only necessary to remove four bolts, making this a very convenient specialty of the kind for ready transportation.

The Deming Hydraeram.

There are few things on the farm of greater utility than a Hydraulic Ram. It works day and night without cessa-

tion, and is never blown down by a hurricane. It saves the strength of the farmer, which is often wasted in pumping from deep wells, and whenever a sufficient fall of water can be obtained, whether from creek or spring, it is an exceedingly useful machine, and will force water to an elevation many times the depth of fall from the supply, and to a great distance from the ram. The term hydraulic ram has been long used, but in putting on the market a new machine of this kind, with many novel features of design and mechanical construction, the Deming Co., of Salem, Ohio, have given such an apparatus the unique name of "Hydraeram." This machine is more efficient, more durable and more simple in construction than the old-style machine, and will commend itself to all dealers who have calls for apparatus of this kind. Patents have been applied for. The Deming Co. manufacture a very large line of hand, wind-mill and power pumps, spray pumps, nozzles, etc. Henion & Hubbell, Chicago, are general Western agents for the Deming Co., and they have other general agencies in the principal cities from whom their goods may be purchased.

Chime Signal Bell

The Gong Bell Mfg. Co., East Hampton, Conn., are making the Chime Signal Bell for motor and other vehicles, which is here illustrated.

These signal bells are made by mounting two gongs on a frame, with a clapper so ar-

ranged as to strike both gongs at the same time. The gongs being of different tones tuned to accord, give a very pleasant and musical sound, which is also loud and clear. The mechanism by which this is performed is extremely simple, and yet very durable. There are no gears or springs to get out of order. By a slight movement

of the foot a single stroke or as many rapid strokes on the bell as may be desired can be given. The bells are nicely polished and nickel-plated, and can be furnished in either 5 or 6½ inch sizes. These gongs can be made as small as 4 inches in diameter if necessary. Prices on other sizes than the regular will be quoted on application. The illustration shows a portion of the vehicle-bottom cut away, in order to indicate the method of attaching the gong.

The literary man, pure and simple, tends toward expansion; the advertising writer is concrete.—*Munsey's Magazine*.

Shrewd advertisers can decide for themselves as to the worth of any publication offered them. Its contents can speak more truthfully than its solicitor. The true advertising value lies in the interest it has for the reader, because such interest alone will attract readers. Nobody buys a paper or a magazine because ten thousand other people buy it. They purchase it for the information or entertainment it affords, and if it has a reputation for supplying this it is sure to be well patronized, and to grow in circulation that is of real value to the advertiser. There may be exceptions, but, as a general rule, good printing and good make-up usually accompany good matter in a publication.—*Richard Wallace*.

Advertisers' Corner.

Rosenbaum (proudly)—My son Solly vent to work re-bording on a newsbaber yesterday, unt lasd nighdt hees city editor sendt him oud on an assignment.

Cohenstein (approvingly)—Dot vos doing splendit. May-pe to-nighdt he gedts sendt oudt on a fire.—*Puck*.

Theory about advertising is a good thing. The man who thinks out the most brilliant plans seldom has time to work them out. But in the advertising experience of the great and successful advertisers one can find both theory and practice. The other fellow's experience is a good thing to know.—*The Trade Press*.

A pleasant, cordial, attentive, but still unobtrusive manner, makes and holds trade. No matter what the transaction—be it a postage-stamp sale or the loan of a directory—it does not take any more time to be amiable than to be crusty. Be careful and not be too pleasant—too familiar; that is not good—it leads to lack of respect.—*Bulletin of Pharmacy*.

Circulation does not determine the value of a medium—that is, not the *quantity* of circulation. A publication, the contents of which are interesting enough to attract readers is a good medium for advertisers, no matter how limited its circulation may be. A publication that is poorly edited, and filled with indifferent matter, is not a good medium, no matter how many hundred thousand copies are printed.—*Richard Wallace*.

Many advertisements and advertising methods that are really excellent under certain circumstances are not used because they have been given a bad name. The most successful advertisers have usually been men who adopted ideas and methods that had been deemed impracticable until the newcomer demonstrated that success could be secured by their means. It is a good plan to harness the advice of others into one's service; but a poor plan to allow that advice to act as a shackle on the freedom of one's own thought.—*Printer's Ink*.

Be especially reverent in your treatment of the customer of slender purse. A multi-millionaire requires only one-tenth the respect due to the man or woman who is bound by the law of necessity to buy within a fixed limit. A readiness to show goods within that limit and a tactful avoidance of anything to wound or make forced economy conspicuous meets with instant appreciation, while attempts to force the sale of goods "just a trifle" above the price named by them is resented—and remembered.—*Texas Publicity*.

The man who does not advertise, says the Ashland, Ohio, *Gazette*, simply because his grandfather did not, ought to wear knee breeches and a queue.

The man who does not advertise because it costs money should quit paying rent for the same reason.

The man who does not advertise because he tried it and failed, should throw away his cigar because the light went out.

The man who does not advertise because he doesn't know how himself, ought to stop eating because he can't cook.

The man who doesn't advertise because somebody said it did not pay, ought not to believe that the world is round because the ancients said it was flat.

One of our largest general advertisers said recently: "I take no man's word for the advantages or disadvantages of a newspaper or magazine; I make no advertising contracts until I have examined and investigated in my own way. * * * I first examine the medium and note its appear-

ance. No poorly-printed sheet is valuable for advertising purposes beyond possibly a limited local field for a very limited class of announcements. I notice particularly the advertisements appearing, noting whether they are of the 'fake' variety. The presence of 'dead' ads or any considerable number of the announcements of daily papers influence me a long way. * * * If I find objectionable features absent, the typographical appearance satisfactory and the advertising columns patronized by live advertisers I usually at this point give the medium a trial."—*Newspaper Ink*.

One of the most successful advertisements the writer used was a letter-writing contest, descriptive of the store and the goods. School girls, young ladies and married ladies of all ages were among the contestants. They came into the store, walked around, talked with the clerks, examined the goods. That alone was a good ad. Every second day for over two weeks one of the best letters received was published in the newspapers. Three prominent ladies were induced to act as judges. In order to insure fair play names of contestants were not given to the judges. The prizes offered were: First, the choice of any garment in the store; second, the choice of any dress pattern in the store; third, six pairs of gloves, and a pair of gloves each to the next six, making nine prizes. The prize winners were firm friends and active advertisers of the store ever afterward, and the whole scheme was talked about for months. For the money it cost (less than \$100) it was the most lasting and effective ad. the store ever had.—*J. E. T. Fraser*.

Awhile ago there appeared in the streets a man in the garb of a countryman, carrying a canvas valise of a kind once used. His attire drew attention, and as people looked him over they saw the sign that was painted on the valise. This man walked around the streets in the neighborhood of his employer's store, and occasionally he would get around to the place itself and halt there on the sidewalk and look up at the sign, to make sure it was the right place, and then go in, to emerge presently for another round. A variation of this idea is found in the work of the countryman who stops and looks up at the tall buildings. He is tall himself and so attracts attention, and his interest in the tall building always interests the city man, and so the city man looks the tall stranger over or looks down along him from head to foot as he stands there with face upturned and notes the peculiarity of his garb, and sees how the bottom leg of one of his trousers is caught on the top of one of his boot legs, for this stranger wears old time boots. Then the city man's eye falls on the sign which the stranger is so innocently holding. And the city man passes on, thinking as he goes that, after all, he is more or less of a countryman himself.—*New York Sun*.

About the best training I know for the prospective advertisement writer is in the printing office. If you can get a place in your local printing office to learn to set type, you will help yourself to a knowledge of several things. You will first learn about printing and about the setting and displaying of advertising matter, the names of type and things that can be done with them. You will also obtain a knowledge of spelling, punctuation, capitalization and paragraphing, all of which are very essential. Nearly all the good advertisement writers I know are printers, or have been. Printing is closely related to advertising, and no advertisement writer can ever do full justice to his work unless he understands in some way just the process that an ad. or booklet or any other piece of printed matter has to go through.—*Richard Wallace*.

A Russian scientist has succeeded in tracing all of man's diseases to the fact that he wears clothes.

How British Tinplates Are Made.

Contrary to the general impression, so far as the general public are concerned, at all events, a tinplate is in reality a tinned sheet of thin steel. To the uninitiated it would seem that the process presented few difficulties, but much careful preparation is necessary before the finished article can be produced. The industry comes to us from Germany. It was first taken up in this country at Pontypool, Monmouthshire, but it was not until 1720 that the work was finally established as a British industry. Since that date it has steadily advanced, although a serious rival has been met with in America. When visiting a tinplate works (says a writer in the *Temple Magazine*), one will notice in the yard a great number of steel bars. This is the material from which the finished plates are evolved. The bars are about twenty feet long, nine inches wide, and half an-inch thick. They are first taken to a steam shears, which cuts them up cold into lengths of about twenty inches. The pieces are next put into furnaces, where they are brought to a full red heat. When they have reached this state a workman inserts his long iron tongs and throws the glowing piece of metal on the floor, which, by the way, is covered with iron plates. It is now picked up by an operative called a "roller-man," and passed between a pair of heavy chilled iron rolls. As the sheet emerges at the other side it is seized by a man called a "behinder," who hands it back over the rolls for the operation to be repeated. The piece that was once nine inches wide, being rolled in the direction of its width, has now become a long sheet of about thirty inches wide. This sheet is doubled three times in succession, being passed through the rolls after each doubling. A multiple plate is thus obtained, comprising eight sheets. For the purpose of doubling the sheets the "doubler" wears an ironclad boot. The multiple sheets are then packed in a heap and allowed to cool. The rolls are very highly polished, and are revolved by a steam engine. Great skill and accuracy are required in turning these rolls, for the following reason: When the hot sheets are passed through, the rolls naturally become heated and expand, but they expand a little more at the center than at the edges, and, in order that a perfectly even sheet may be produced, they are turned somewhat concave, so that when they become hot they present a true level surface. In former times, before the introduction of rolls, each sheet had to be hammered out by hand, being now-and-again heated in a charcoal fire. As can be imagined, this was a most tedious process. To accelerate the work, a Major John Hanbury, who is sometimes called the "father of the English tinplate trade," invented a hammer driven by water; but it was not until the year 1728 that sheet-rolling was introduced. After the multiple plates have become cool, they are sheared to the required size. The eight sheets are then torn apart by hand. As they are separated, they give forth a very peculiar tearing sound, and when they are obstinate a long steel knife is employed with rapid and expert effect on them. The edges of the sheets are, of course, very sharp, and those engaged in the work of separation are obliged to wear a kind of leathern mitten to prevent their hands being cut. The loose sheets are next piled up on small trolleys and taken to another part of the works, where they undergo a series of processes to prepare them for the coating of tin. They have first to be "pickled." The machine by which this operation is effected will be seen by any spectator to consist of two tanks placed one at each side of a central column supporting two wheels at the top. One of the tanks contains cold water and the other a solution of vitriol (sulphuric acid). The plates are put into a crate and plunged up and down in the vitriol tank, which removes all the scale, and gives them a chemically clean surface, which is an essential condition to successful tinning. The vitriol is manufactured from iron pyrites. About 1720 the

plates were cleaned by filing down the rough parts, and then scouring them with sand and water. Later, a mixture of barley and water was used, the solution being heated in underground vaults where the heat was so intense that only naked men could work there. The pickling process is carried on by men aided by girls and boys. In order that they may not receive any cuts from the acid-pickled plates, which might result in blood-poisoning, sheepskin aprons are worn, and the hands are protected with thick leather gloves. After being pickled the plates are washed in the water tank, which removes all traces of the acid. Although they are now clean, they are very brittle, and, therefore, quite unfit for use. They are made ductile by annealing. For this purpose they are piled up in a great heap on an iron stand, and, after they have been surrounded by an iron box, are sealed with sand, and placed in an annealing furnace for about twelve hours, where they become red hot. The slower they are allowed to cool the more ductile they become. The sheets are now soft and pliable enough, but their surfaces have become dull, so they are passed through the cold rolls, which polish them, but, at the same time, make them a little too brittle again. To bring them back to their former suitable condition they are once again annealed, only this time for a shorter period, and, after being pickled and washed a second time, are at length ready for the actual process of tinning. The tinning process is a delicate one. The tinning bath is divided into two portions, one containing the actual metal itself, which is kept in a molten state by means of coal fires, and the other containing the "flux," which causes the tin to adhere to the sheets. On the top of the tin there is a layer of grease to prevent the molten metal being oxidized by exposure to the air. The prepared sheets are placed in at the flux side of the machine, and after passing under a series of rolls in the tin bath emerge bright and shining at the other side. When the sheets have been tinned they are polished in a machine, and are then ready for the "sorters."

By-Products of the Chicago Stock-Yards.

To such an extent has the utilization of by-products been carried in the stock-yards in Chicago, states the *American Exporter*, that now the only waste in a steer is the gastric juice, and what was formerly the waste is now worth more than the meat. The horns go into knife handles or backs for combs. The white hoofs are sent abroad to return as ivory, while the black hoofs become handles for knives and canes and are made into a dozen other things, the soft internal parts being resolved into jellies and candies. From the bones are produced piano keys, dice and bone-black. Glue, gelatine, neat's-foot oil, and an imitation whalebone are made from the sinews. The clarified blood is taken by the sugar refiners, while the rest of it becomes buttons and fertilizers. The intestines serve as casings for sausage, and the bladders as cases for snuff. The tail tuft is an insignificant part of the animal, but when steamed, dried and washed it becomes a curled hair that sells readily. As a result of this care and economy, the financial returns from a steer, as estimated by one in the business, are: From the meat and compounds of meat, \$40; from the hide, hair, horns and hoofs, \$25; from the fats, blood, sinews and bones, \$15; from all other waste, \$15, or \$55 received from the by-products.

A cold wave is a fall of temperature in twenty-four hours of 20 degrees over an area of 50,000 square miles, the temperature in some part of this area descending to 36 degrees; between '80 and '90 no less than 691 cold waves were recorded in the United States.—*Exchange*.

The United States is the leading manufacturing nation and her home market is one of the largest in the world.

trust competitors. If Congress desires to protect the people against trusts, this is the point to attack. The interests of the railroad and the people will be promoted by stringent legislation.

Trade conditions continue to be affected by the expectation of reaction, that would naturally follow from the unusual advance of last year, but the inherent financial strength is attested by the continued demand for goods which makes trade fairly active.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE PITTSBURGH TRADE.

The steadiness and continued strength of the pig iron market, with the reports of the same condition in Europe, should stiffen the weak-kneed among our jobbers and smaller class of manufacturers.

Spring weather which has been delayed by a very cold March, is now upon us, and will quicken demand for seasonable goods. There is every reason to believe that there will be a very large consumption of all kinds of goods this year.

Labor is employed at good wages all over the land.

Prices for products of the soil and of the mill are remunerative, a large export demand for both being among the favorable conditions.

There will be a great amount of building in this vicinity this year: the better class of residences, large manufacturing buildings, and also workingmen's houses to accommodate the men about coke works and mills.

The new coke district being opened up in Fayette County is now called by traveling men "the little Klondike," because of the ease with which orders are found among the merchants there.

LOGAN-GREGG HARDWARE CO.

THE VICKSBURG TRADE.

Mississippi is advancing rapidly. The Legislature has passed a bill giving the State a new capital to cost one million dollars. Quite a great deal of interest is being manifested in cotton mills. The agricultural districts are extremely prosperous. Lots of our friends often told us when the free silver craze was such a fad, and cotton selling for five cents, cotton seed for five dollars per ton, that they would vote the Republican ticket if they could get ten cents for cotton and twenty dollars per ton for seed. As these are the prevailing prices now, we expect to see Mississippi go Republican next Fall. Hardware and agricultural implements are selling well and the Spring trade will be large and flourishing. The outlook for prices for next year's crop of cotton, good. Expect the season to start in at eight cents for middling; its cost is four cents to make, so without a trust, the cotton planter stands to declare one hundred per cent. dividend. Credit Man and Salesman.

"Traveling salesmen, you may avoid the necessity of having orders turned down by posting yourselves beforehand, and not soliciting an order beyond an amount that the customer would be reasonably entitled to. You may avoid the turning down of orders by impressing on the trade the necessity of meeting each bill as it matures, and in not offering longer time than the regular established terms. You may avoid the turning down of orders by encouraging your trade in the giving of signed statements to regular established agencies, and firms from whom they are seeking credit. Why should they not make these statements, when the national banks of the country, whose capital may never be less than \$50,000, are required by the Government to make such statements from four to five times every year, and the Bank of England, by Parliament, to make such statement once a week.

"You may avoid largely the necessity of turning down orders by educating your trade in up-to-date business ideas. Many of them come fresh from the plowshare, or other walks of life in which they have had no opportunity to gain a business education. To such you may lend a helping hand by educating them in the economy of purchase of goods, and method in handling their office departments, by which their efforts will be more successful, and they will place themselves in a position where they will be entitled to confidence and credit. I am sure there is not a salesman (surely not one who is entitled to that name in its best and broadest sense), who does not at the end of the year look back with as great a degree of pride on a record that discloses few losses as one that shows a large volume of sales. You cannot separate the two. At the door of the credit man you may, if you will, lay all the blame for the losses on your line; to him may be ascribed every sin of omission and commission, from the garret to the cellar, but deep down in your hearts you will acknowledge that there is a responsibility that attaches to you for losses, just as much as you will claim credit for a clear record, and to which you are justly entitled. Every dispenser of credit will gladly admit that it is often due to the work of the traveling salesman that losses are avoided, and we must realize that credit men and salesmen must work hand in hand to attain the greatest good for either, and finally let us all, whether as traveling salesmen, credit men, or by whatever calling we may be known, ever keep before us that divine injunction which bids us to do unto others as we would that they should do unto us, resting assured that when each shall have thus played his part in the great drama of life, we may then confidently look forward to the early dawning of that day of universal brotherhood so happily depicted in the Utopian dreams of Bellamy."

From an address by W. B. Roberts, Esq., at the banquet of the Travelers' Protective Association, Portland, Ore.

Postal Automobiles

The employment of the automobile in the collection and distribution of mail matter was one of the first uses which suggested itself, when the possibilities of the motor vehicle for public service began to be considered. Certainly in no other single field does it hold out greater probabilities of benefit to the whole people. Traveling at a considerably greater speed than the street cars, and enabled to reach points by far more direct routes and without numerous delays, the advantages which the vehicles possess for city postal service are readily apparent. On the other hand, with rural free delivery likely ere long to become an established fact in all the more densely populated sections of the country, it may be seen also that by the utilization of the new motive facilities the residents of our farms will in many cases be enabled to enjoy almost as many opportunities for quick communication as their city cousins.

The use of the automobile for postal service in Germany and France has long since passed the experimental stage. The post-office authorities of Berlin some time ago put into practical use six of the Loutzki automobiles, and so successful was the experiment that a large additional number of vehicles were soon after ordered from the manufacturers. The experiment in Berlin so completely demonstrated the efficiency of the motor vehicle for the work that a number of the other large cities in Germany immediately began preparations to introduce the system. The French government is not only regularly making use of automobiles for the transportation of the mails in Paris and other large cities, but has recently ordered fifty heavy wagons, each equipped with nine horse-power gasoline engines, for the purpose of carrying mail in the Soudan.

The initial introduction of the automobile in postal service in this country was made some months ago in Buffalo, N. Y. The vehicle used was an electric phaeton of about one ton weight, manufactured by the Pope Mfg. Co. As a speed trial a four mile run from the main office to a sub-station was made in nineteen minutes, and the return trip consumed but eighteen minutes. During the collection the route covered was the same and mail was collected from twenty-two regulation boxes and eight package boxes—a total of 150 pounds—in thirty-three minutes.—First Assistant Postmaster Heath in the *Automobile Magazine*.

Odd Causes of Electrical Fires.

Vibration of wire ceiling under a motor caused wire lathing to cut through insulation and tubing on conductor passing through ceiling to motor. Heavy loss.

Electric iron with current on, left upon a wooden table, burned through table and set fire to floor. Loss, \$4000.

Show-window fire from short circuit through worn insulation where wires made sharp turn over baseboard.

Accumulation of metallic dust on switch short-circuited it. Sprinklers extinguished fire.

Arc light circuit in lead sheathing grounded through iron hook by which it was attached to roof, the insulation becoming corroded at point of contact.

Electric wire next to gas pipe became partly stripped of insulation. Current punctured gas pipe and ignited gas.

Flexible lamp cord in show-window was wound closely with ribbon. Heat from lamp ignited ribbon while trimmer was still in window. Loss slight.

Uncovered porcelain link fuse box burned out threw hot metal into rubbish barrel below.

Fan motor shut off for season had fuses left in and paper tied over fan and motor to keep out dust. Current being accidentally turned on, the paper prevented fan from revolving, and overheated windings on motor set fire to paper.

Feed wire of street railway, attached to insulator on building, made contact with iron column. Loss, \$200.

Fire in fireproof building. Fire started at base of the shaft which contained the electric light feeders supplying the building. At the base of this shaft the cables were protected with circular loom, and led into iron conduit running to the basement. Dirt and moisture collected about the cables and caused a leak of current, resulting in a short circuit, which set fire to insulation of cable and ignited woodwork of doors in shaft. The loss was confined to damage to cables and woodwork at each floor leading into the shaft, such as door casings, etc. At a few points lead pipe connections to drains were melted off. Loss, \$500.—National Board Electrical Bureau Report.

•

The largest trees are not the *Sequoia gigantes* of California, but certain species of eucalyptus in Australasia. One specimen in Victoria is said to be 471 feet high.

SOLD BY ALL HARDWARE DEALERS.

As to Sight Drafts.

The average business man is possibly too apt to overlook the effect of little things.

It may be that he permits the draft made by a creditor for a matured account to go back unpaid, for lack of funds, carelessly giving the bank as a reason, "Amount not correct," or "Not due." Again, he orders it returned because of a petty claim against his creditor, or, perhaps more frequently, gives that as the reason for non-payment when there is another cause.

Most business houses send a notice of a draft to follow by first rendering a statement of account, showing details, the maturity of various bills being emphasized, and asking that a remittance be made, or the draft honored. Some houses notify their customers in other ways, and as a rule ample time is given for a reply to reach them, so that a payment or a claim can be duly considered before the draft goes forward.

Under these conditions it certainly is wrong to permit a creditor's draft to be returned, for he has shown you the courtesy that is due from one business man to another, and naturally expects similar treatment at your hands.

However, if one has been careless and not prepared for the draft which would have been withheld, upon proper and sufficient excuse being given, it is better to give frankly the true reason, or to make some arrangement to protect the draft, whether correct or not, trusting your creditor to make good your claim. He, having trusted you with his goods, is justified in expecting you will rely upon him to correct some trivial difference.

It should be borne in mind that the handling of a matured account by a creditor is attended with expense; consequently you put him to unnecessary expense when you permit his draft to go into the bank's hands, only to be refused; nor is this all. His books show plainly whether you are in the habit of honoring a draft or not, and your credit is affected accordingly.

It rests with you, whatever you do, to be entirely frank with a creditor, and if you refuse payment for lack of funds in hand to-day, say so. Your creditor appreciates and trusts frankness. If for other cause, tell it, and follow promptly the draft's return with a letter of explanation, and, if possible, show your disposition to "tote fair" by remitting (not by check, which will throw extra expense on him, but a bank draft on New York or St. Louis, or a money order) for such amount as you can spare.

The merchant who looks after these little details in a conscientious manner is sure to win friends, and to receive concessions and generous treatment to a degree which the man who is careless about them cannot hope for. The value of credit was never greater than to-day. It is at a premium, and your holdings of this commodity will fall below par if little things are ignored.—Arthur H. Foote.

The loftiest structure in the world is in Paris, (the Eiffel Tower.)—Ex.

American Laundry Machinery Abroad.

The American Laundry Machine Co. has recently shipped a complete steam laundry, including engines, boilers and all accessories, to Christiania. The laundry will be the first establishment of its kind in Norway. It will be erected under the supervision of American engineers. The plant will have a weekly capacity of 5000 shirts and 50,000 pieces of table and bed linen. The same company not long ago completed the erection of a large steam washing establishment at Caracas, Venezuela, which is said to be the first plant of the description ever built in that part of the world.

The Old Testament has 39 books, 929 chapters, 23,214 verses, 592,439 words, and 2,728,800 letters; the New Testament has 27 books, 260 chapters, 7959 verses, 181,253 words, and 838,380 letters; the complete Bible has, therefore, 66 books, 1189 chapters, 31,173 verses, 773,692 words, and 3,567,180 letters; there are more people in London than there are letters in the Bible.—Exchange.

Some one who has figured on the work done at Pompeii since June, 1872, says that it will take until 1947 to unearth the entire ruins with eighty-five men working every day.—Ex.

In every teaspoonful of human blood there are about 15,000,000,000 red corpuscles, but only 30,000,000 white ones; the blood of clams, lobsters, and nearly all other invertebrates contains no red cells, but only white.—Ex.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Caruthersville, Mo.—The Caruthersville Hardware Co. has been incorporated to do a Hardware business. Capital, \$5000. Incorporators: O. Seyppel, of Seyppel, Ark.; W. E. Tarkington, C. Dorroh, W. A. Ward, all of Caruthersville.

Charleroi, Pa.—J. Frank Frye and John Shanton will open a Hardware store the coming Spring.

Dover, Del.—C. B. Hope and Charles W. Lord will shortly open a large Hardware store in this town.

Elida, Ill.—B. E. Avery.

Fayetteville, Tenn.—West & McKenzie.

Lake Charles, La.—The G. T. Rock Hardware Co., Ltd., has been incorporated in this city with a capital stock of \$20,000. The new company succeeds the establishment of G. T. Rock.

Little Rock, Ark.—Articles of incorporation of the Bodine-Lyell Hardware Co., of Clear Lake, Miller County, have been filed with the Secretary of State. The capital stock is \$20,000. The officers are: R. E. Bodine, president; J. R. Lyell, vice-president; T. W. Lyell, secretary and treasurer.

London, Ky.—C. R. Barnett.

Nashville, Tenn.—The Secretary of State has granted a charter to the Barnes & Boring Hardware Co., of Carter County, with \$5000 capital stock. The incorporators are J. W. Barnes, J. R. Boring, John T. Ryan, J. W. Barker and D. J. Smith, Jr.

Springfield, Mass.—E. S. Powers.

White Plains, N. Y.—T. O. Dillingham.

Changes and Improvements.

Ackley, Ia.—The E. M. Healey Hardware Co. has sold out to J. B. Green, of Oelwein.

Akron, Ohio.—The Ohio Glass & Hardware Co. has adopted an amendment whereby its name is changed to the Morgan & Bunnell Co.

Cherry Creek, N. Y.—N. H. Shepard has sold his Hardware stock to Robert James and C. H. Delamater.

Dublin, Ga.—The Robinson Hardware Co. are having material placed upon the ground to build a new two-story brick building for their business, their old quarters having become too small to accommodate their increased patronage.

Franklin, Tenn.—Sam Pointer has purchased from his brother Henry, all of his interest in the large Hardware, grocery and implement business of Pointer & Co.

Fulton, Mich.—L. Salisbury has moved his stock of Hardware into the building lately occupied by H. Richardson.

Gloucester, Mass.—L. E. Andrews, for many years with L. E. Smith, the well-known plumber and Hardware dealer, has severed his connection with that establishment and will start in business on his own account in the store formerly occupied by S. S. Hartwell in Center block, which is

now being fitted up to accommodate the new departure.

Hanover, Mass.—Phillips, Bates & Co. are building a handsome room, 20x40 feet, to accommodate their increasing business. Everything in the Hardware line will be kept there.

Hastings, Minn.—B. F. Torrance has associated himself as a partner with the Hardware firm of Johnson & Greiner.

Milwaukee, Wis.—The Hardware firm of S. A. Perkins & Co. will remove to the Commercial block, as soon as the quarters can be remodeled.

Oneida, N. Y.—C. H. Conley has removed his Hardware, stove and bicycle business to the Warner stores on Madison Street, which have been made into one store by the removal of part of the partition.

Oneida, N. Y.—Meador & Sanderson, the new Hardware firm, have purchased the stock of George W. Smith, who has conducted a Hardware store on Chestnut Street and will add it to the stock recently purchased of the Fannan estate.

Plainfield, N. J.—H. E. Gayle, has formed a company, of which he is at the head, to purchase the old established business of the J. P. Laire Hardware Co., who are located on West Front Street, near Park Avenue.

Seattle, Wash.—The long established and well-known Hardware house, the Z. C. Miles Co., after several years' operation under the efficient receivership of A. L. Piper, has been reorganized, and will be continued under the name of the Z. C. Miles & Piper Co.

Southbridge, Mass.—The old Hardware firm of George L. Winter has gone out of business owing to the recent death of George L. Winter. The business will be continued by G. Clarence Winter, who for the past fifteen years has managed the business of the deceased. The new firm took the business March 1, trading under the name of G. C. Winter.

South Norridgewock, Me.—The Hardware firm of Veazie & Jones has been dissolved by Mr. Jones selling out his interest to Fred Tobey. The new firm will be known as Veazie & Tobey.

Springfield, Ill.—O. F. Stebbins & Co. have removed their Hardware stock into the room at No. 421 East Washington Street.

Spring Valley, N. Y.—Louis Boecher and Charles I. Knapp have dissolved partnership in the Hardware business on Main Street. Mr. Boecher will continue the business.

West Bend, Ia.—Crowell & Lohr have sold their Hardware store to Mr. Rowell.

Wilkesbarre, Pa.—Cyrus Straw, George W. Lewis and F. A. Phelps, of Phelps, Straw & Co., have become associated with W. F. Dodge, successor to Dodge & Spence, in the Hardware business at the corner of West Market and South Franklin Streets and will continue the business under the name of the City Hardware Co.

Wortham, Tex.—The Wortham Hardware Co. have sold their stock of Hardware to B. F. Anderson of Temple, who will move to Wortham and continue the business under the management of D. E. Wheeler.

Business Embarrassments.

Carlisle, Ky.—Robert C. King, a Hardware merchant, has filed a voluntary petition in bankruptcy. His liabilities amount to \$5827, with assets of \$185.75.

Cleveland, Ohio.—A deed of assignment has been filed in the insolvency court by William S. Rendall and John S. Rendall. They are partners, and have been conducting a Hardware business at No. 1511 Cedar Avenue. They place their assets at \$3400, and liabilities at \$2200. Ralph R. Rule was made assignee.

Cleveland, Ohio.—Henry H. Dewey, Hardware merchant, at No. 994 Payne Avenue, has filed a deed of assignment in the insolvency court. The liabilities are placed at \$2000 and assets \$1000. The assignment was made to John H. Delaney.

Elmira, N. Y.—Armund Hurth, Hardware dealer at No. 157 Lake Street, has filed a petition in bankruptcy. The schedule shows liabilities of \$4078.27, and no assets.

Raleigh, N. C.—The stock of goods of Jacob S. Allen, Jr., Hardware merchant on East Hargett Street, has been taken possession of by the sheriff.

Burglaries in Hardware Stores.

Latrobe, Pa.—Houck & Sons, cutlery.

Mattoon, Ill.—Kurtz Bros., revolvers.

South Glens Falls, N. Y.—Stone & Davis, cutlery.

Fires in Hardware Stores.

Baraboo, Wis.—H. Hoggs; total loss.

Birmingham, Ala.—The Moore & Handley Hardware Co.'s stock has been destroyed by fire. Loss \$50,000.

Chicago, Ill.—The Independent Supply Co. has been incorporated. Capital, \$10,000. Hardware and machinery business. Incorporators: Homer I. Kraft, Edw. T. Wray, Adna H. Bowen.

Columbus, Ohio.—The Laminated Tube Co. has been incorporated by Louis Fink, George C. Urlin, Thomas Midgeley, Harry D. Freeman and Charles P. Pedrick. The incorporators are all members of the Columbus Bicycle Co. The capital stock is \$50,000, in shares of \$100 each.

Denver, Col.—The National Fuse & Powder Co. has been incorporated. Manufacturing and selling fuse and powder. Capital, \$100,000. Incorporators: C. Boettcher, W. H. Emanuel, C. K. Boettcher, J. F. Champion, D. H. Dougan, all of Denver.

Detroit, Mich.—A new business has been organized with a paid-up capital of \$100,000, to manufacture computing scales for grocers under the name of The W. F. Stimpson Co. The Decker Mfg. Co.'s plant at Nos. 22-23 Antietam Street will be fitted up for this purpose, and work will be begun at once. The officers of the concern are: President, Sherman R. Miller; vice-president, John W. Leggett; secretary and treasurer, George H. Paine; general manager, W. F. Stimpson; general sales agent, R. J. Rutledge.

New Haven, Conn.—The National Wire Corporation has been incorporated, with a capital of \$1,000,000, to take over the business of the National Wire Co., of the same place.

New York, N. Y.—The Gleason-Peters Air Pump Co. has been incorporated. Manufacturing air pumps, etc. Capital, \$10,000. Incorporators: E. P. Gleason, of Brooklyn; Mary B. Peters, W. R. Peters, both of New York City; O. F. Gleason, of Arlington, N. J.

New York, N. Y.—The Fay Belting Co. has been incorporated to deal in leather belting, hose, etc. Capital, \$5,000. Incorporators: G. W. Rowbotham, of Boston, Mass; W. C. Fay, of New York City; McD. DeWitt, of Brooklyn.

New York, N. Y.—The Federal Rubber Co. has been incorporated. Capital, \$20,000. Directors: Theron L. Smith, Henry L. Brown and Charles E. Carr, Brooklyn, and George H. Juennard, New York City.

Peekskill, N. Y.—The Rossmore Co. has been incorporated to manufacture, stoves, ranges, etc. Capital, \$100,000. Incorporators: I. F. Roe, W. S. Roe, both of Newark, N. J.; H. M. Hitchings, of New York City.

Philadelphia, Pa.—The National Stove Co. has been incorporated to deal in stoves and ranges. Capital, \$2000.

Rochester, N. Y.—The Wager Mfg. Co. has been incorporated. Manufacturing machinery. Capital, \$15,500. Incorporators: J. G. Wagner, Jr., W. G. Humphrey, C. W. Eichelman, all of Rochester; J. G. Wagner, Jr., attorney, Rochester.

Salt Lake City, Utah.—The Ebony Paint Co., as a result of experiments recently made in treating samples taken from the mineral paint deposits near this place, have decided to erect a plant for the treatment of the mineral.

San Francisco, Cal.—The Lewis E. Spear Co. has been incorporated to manufacture stoves, etc. Capital, \$50,000. Incorporators: L. E. Spear, of Alameda; H. P. Wilson, W. H. Martin, A. F. Spear, G. A. Martin, all of San Francisco.

Tacoma, Wash.—The Pacific Pulley Mfg. Co. has been incorporated. Capital, \$25,000. Incorporators: J. T. Moore, C. S. Fell, both of Tacoma.

Trenton, N. J.—The Vacuum Gas Stove Co. has been incorporated. Capital stock, \$100,000. Warren Collins, Thomas Covington and Davis Greer incorporators.

Wheeling, W. Va.—The Tube Steel Co. has been incorporated to do a steel and iron business. Capital, \$5,000,000. Incorporators: J. N. Vance, J. D. Culbertson, F. J. Hearne, all of Wheeling; A. E. Luke, E. C. Converse, both of New York City.

Changes and Improvements.

Ansonia, Conn.—The Abington Tack & Machine Co. have moved back to the Gurney factory at Whitman, Mass.

East Alton, Ill.—The Western Cartridge Co. are having new machinery built at their plant to equip the plant for the manufacture of cartridges and shells on a large scale. Much of the machinery is of new design and is being built in the new factory building.

Greenfield, Mass.—Ground has been broken for an addition to the Goodell-Pratt factory, 36 x 60 feet. Part of it is to be two stories, the rest only one. The extra room will be used for the same kind of work as is now done at the older part of the factory.

Peoria, Ill.—The Culter & Proctor Stove Co. have established a branch in Topeka to

be the distributing headquarters for Kansas, Oklahoma and Nebraska. N. L. Stewart, of Topeka, representative of the manufacturers for the three States, will have charge.

Portsmouth, R. I.—The Washburn Wire Co., of Worcester, Mass., has purchased property at Portsmouth for the manufacture of steel wire. A large factory will be erected there and the rough part of the work will be done on Rhode Island soil, while the rest will be done at Worcester. The property purchased is the Benjamin Hall farm, on the shore of the bay, and includes Portsmouth Grove. The farm is an extensive one, bordering on a large area of inland water which has a depth of from 67 to 140 feet off the grove.

Smith's Falls, Can.—The Perrin Plow Co. are busily engaged in the alterations and repairs necessary to the old Beckett factory to suit the requirements of the new business and hope to get the works in motion in the early Spring.

Syracuse, N. Y.—The Syracuse Stove Works have leased a part of the building occupied by the McCarthy skirt factory at the corner of Geddes and West Fayette Streets, and will take possession at once. For the present the company will use the addition for storage and later in the season will do some manufacturing there. The force of employees will then be increased.

Taunton, Mass.—Nelson & French have started building their new factory for making rivets on Broadway.

Tyringham, Mass.—M. W. Stedman's new rake shop is now completed.

Wichita, Kan.—Moore Bros., proprietors of the Wichita Stove Works, have purchased a plot of ground on the corner of First and Santa Fe Streets, and will in the near future move their present building upon it and then rebuild it and nearly double its present size. The cost of the new location is stated to be \$3000.

Recent Embarrassments.

Bainbridge, N. Y.—Don, A. Gilbert & Sons, manufacturers of sleds, etc., have made an assignment in favor of Charles G. Norton, of this place.

Recent Fires.

Branford, Conn.—The Branford lock works department of the Yale & Towne Mfg. Co. has been damaged by fire, caused by one of the lacquer kilns becoming overheated. The loss, however, will be covered by insurance.

Leamington, Can.—Gardner Bros.' handle factory has been totally destroyed by fire. A large amount of stock, machinery and two cars loaded with handles were destroyed. The building was insured for \$1000 and the contents for \$1200.

Minneapolis, Minn.—Fire in the basement of the building at No. 312 Hennepin Avenue, occupied by the Great Western Stove Repair Co., has caused about \$300 worth of damage on the building and per-haps \$2000 on the stock.

Benefits Greater Than Ever Before.

Nicholson File Co., Providence, R. I., [Files]: We are pleased to state that the results thus far obtained from our advertisement in the columns of *Hardware* fully justify our having resumed our contract with you. We feel that the benefits which we are securing from your paper are greater than ever before.

Arnon Design.
Sargent's
Artistic Hardware.

A pleased customer

is the best advertisement. Please your customers by selling them Sargent's Hardware when they call for Sargents. Home builders know of it—it is advertised—and believe there is no Hardware quite so good; architects everywhere specify it because of the beauty of the goods—they know it will give satisfaction. With the renewal of building in the spring you will have calls for Sargent's Artistic Hardware.

The . . . “Handiest” Step Ladder

CAN BE EXTENDED TO
DOUBLE ITS LENGTH.

The malleable casings keep the wood from splitting, there is no strain on the screws, and the platform shelf works automatically. The upper tread has iron pins going through to prevent breaking, and flanges keep the ladder from going out of joint. . . .

**IMPROVED
YOUNG AMERICA SCALE.**

It is Made of Steel. White Tile Top. Tin or
 Brass Scoop Top. Brass Dial.

BEST IN THE WORLD.

A most beautiful and attractive scale for all purposes. Beautifully enameled, ornamented and striped. Weighs 30 pounds by ounces. Occupies but little space. Is light and easily moved. It can be regulated by turning the brass screw on top. It is always ready and easily understood. It is a convenient scale to use and has no weights that may be lost. You can look this one in the face to prove its accuracy without looking for weights. Every scale examined before leaving the factory and warranted correct.

HINGE
AND
HASP**

Designed Especially for
 Fruit Crates, Milk,
 Egg, Cracker and
 other styles of
 Boxes, requiring a
 hinged cover.

CARY MFG. CO.,
 19-21 Roosevelt St.,
 NEW YORK.

SAMPLES
BY MAIL.

IN our patent loop joint hinge, one part of the loop is made rigid to one-half of the hinge, making the strongest, neatest and best hinge for the purposes mentioned.

Our patent fastening plate and catch which go with the hasp are so perfect in their construction that the catch never gets loose from the plate, as is often the case with others on the market.

When desired, we furnish our hasp and catch with a small hole through each, so that a wire can be inserted and then sealed by use of a lead seal.

IF YOU WANT TO KNOW ASK US

How to file Catalogues, quotations and every class of data, with no more trouble to file than to throw in the waste basket, and as easy to get when wanted as though in your vest pocket.

FOLDING PAPER BOX CO., South Bend, Ind.

"A PROFITABLE MEDIUM TO ADVERTISERS."

Gilbert & Bennett Mfg. Co., Chicago and New York. [Wire Goods]: You have reason to be proud of HARDWARE's success both as a journal of interest and of usefulness to your readers, and as a profitable medium to the numerous advertisers. From the fact that our card has been steadily published in its columns from the first number, it must be concluded that we have found you a satisfactory medium.

"SHOULD MISS IT VERY MUCH."

Morley Bros., Saginaw, Mich. [General Hardware]: We receive HARDWARE every issue, and find it of such interest as to oblige us to look through it's pages quite carefully, and note with considerable interest the items you publish. It is quite an aid to the writer in his branch of the business, and we wish to say, that we should miss your paper very much indeed, if we did not receive it.
W. L. Sandford.
